

I do not approve, nor accept the installation and use of these wind turbines.

The cost and damage to the land they are installed on is immeasurable. For example loss of wildlife, pollution in the air, and ground as these turbine blades disintegrate over their life span.

The fact that they are virtually unrecyclable when their usage is up is totally unacceptable and abhorrent to Tasmania's world reputation as one of the cleanest places on the world.

The land they stand upon will become valueless to the unfortunate owners who do allow this or are forced to acquiesce to the pressure for construction

Last but by no means least is the fact that no Tasmanian's will benefit from turbines by way of cheaper power.

Your proposal is a poorly thought out, blatant money grabbing exercise under the guise of environmentally clean power generation.

Take another good hard look at what is happening around the world, learn from it.

Do not destroy Tasmania.

Yours,

Anita Turnbull

7th generation Tasmanian resident
