Re: Support for Powercor's Proposed Flexible Load Tariff

To whom it may concern,

Rondo Energy welcomes the opportunity to express its support for Powercor's proposed flexible load tariff.

By strongly discouraging consumption during peak periods, the tariff helps to ease pressure on the grid. Furthermore, it encourages greater utilisation of existing network assets during off-peak times—enhancing network efficiency and delivering better value to all users.

Importantly, the tariff structure also facilitates fuel switching for industrial energy users. By making it more economically viable to shift to electricity during off-peak times, the flexible load tariff supports decarbonisation of heat and industrial processes and reduces demand for limited gas supplies.

We commend Powercor for its leadership in tariff reform and encourage the AER to approve this beneficial approach.

Please feel free to contact Rondo for further information.

Sincerely,

Tom Geiser
Head of Australia, Rondo Energy
