

# Jemena Electricity Networks (Vic) Ltd

## Victorian emergency backstop mechanism - Stage 2

Appendix F

Role descriptions

## 1. VEBM2 role descriptions

This table lists the roles and their association role descriptions for the Reform and Future Networks Program Leadership and the VEBM2 project delivery team.

Role Title	Description
<b>RAFN (Reform and Future Networks) Program Leadership</b>	
Program Director	Provides overall leadership and delivery of RAFN Program regulatory and strategic outcomes. Approves key MITE project planning and delivery artefacts on behalf of the Program to ensure project timelines are met and risks managed.
Program Delivery Lead	Manages progression of projects within the RAFN Program, ensuring robust governance and a program-wide integrated view of delivery assurance. Ensures compliance with internal processes and ensures projects remain on track to deliver, supporting the MITE (and other) project managers in execution and escalation as required.
Program Coordinator	Provides operational support, administration and coordination across the RAFN Program, ensuring visibility of cross-project activities.
Business Owner	Overall accountability for the definition and achievement of business outcomes across the RAFN Program; ensures MITE project alignment in the context of other RAFN projects.
Implementation Manager	Oversees technical delivery, integration, and implementation activities across all RAFN projects. Accountable for dependency management across the RAFN program.
Program Change Manager	Leads change management and business readiness across the program, managing multiple changes that impact JEN across multiple RAFN projects.
Industry Engagement Lead	Provides regulatory, market and industry context, interpretation and requirements to project teams. Ensures continuous alignment is reflected in project scope, planning and delivery.
<b>VEBM2 project delivery team</b>	
AMI Metering & Network Comms Specialist	SME responsible for configuring and optimising metering infrastructure and communication networks - will ensure accurate data collection, reliable connectivity and operations.
Analyst Programmer	Writes, tests, and maintains code to create software applications and systems that meet specified requirements and functionality.
Applications Developer	Designs, builds, tests, and maintains software applications to meet user needs and enhance business processes
Applications Support	Maintains and troubleshoots software applications to ensure their stability, performance, and availability for end users.
Business Analyst	Responsible for collaborating with digital and business stakeholders in identifying and documenting the requirements clearly and accurately, which should support the development of an effective solution.
BW Specialist	Reporting specialist responsible for the build, configuration, enhancement, and unit testing of the reporting component

Role Title	Description
Change Manager	Responsible for the planning and execution of organisational change management activities including communications and training
Cloud Engineer	Designs, implements, and manages cloud-based infrastructure and services to ensure scalability, reliability, and security of applications and systems
Confluent Engineer	Designs, builds, and manages real-time data streaming solutions using Confluent Platform and Apache Kafka to enable reliable data flow and event-driven architectures.
Customer & Commercial SME	Responsible for providing subject matter expertise advice to design business and digital solutions for customer and commercial
Cyber Security Architect	Designs secure system architectures and strategies to protect JEN assets from cyber threats and ensure regulatory compliance.
Cyber Security Specialist	Implements secure system architectures and strategies to protect JEN assets from cyber threats and ensure regulatory compliance.
Data Analytics	Collects, processes, and interprets data to generate insights that support informed business decisions and strategic planning
Data Specialist	Manages, organizes, and ensures the accuracy, integrity, and accessibility of data to support analysis and informed decision-making.
DBA	Designs, maintains, and secures databases, ensuring optimal performance, availability, and data integrity.
DERMS Engineer	Designs, implements, and manages Distributed Energy Resource Management Systems to optimize the integration, monitoring, and control of distributed energy resources on the grid.
FN Team lead	Responsible for providing subject matter expertise advice to design business and digital solutions for future networks
General Staff	General staff requirement
GIS Specialist	Collects, analyzes, and visualizes geospatial data to support mapping, decision-making, and spatial analysis
Integrations Engineer	Designs, develops, and maintains systems and software integrations to ensure seamless data flow and interoperability between applications and platforms.
Kafka	Designs, builds, and manages real-time data streaming solutions using Confluent Platform and Apache Kafka to enable reliable data flow and event-driven architectures.
Kong Consultant	Designs, implements, and optimizes API management and microservices solutions using Kong to ensure secure, scalable, and efficient service integration.
Kong Integrations	Configures and manages API gateways and service integrations using Kong to enable secure, efficient, and seamless communication between applications and services.
MSI Developer	Designs, builds, tests, and maintains MSI integrations to meet user needs and enhance business processes
Network Engineer	Designs, operates, and maintains electrical power networks to ensure safe, reliable, and efficient transmission and distribution of electricity.

Role Title	Description
Platform Engineer	Designs, builds, and maintains the underlying infrastructure and tools that enable efficient development, deployment, and scaling of applications.
Project Administrator/Coordinator	Supports project planning, coordination, and documentation to ensure smooth execution, timely delivery, and effective communication among stakeholders.
Project Manager	Responsible for ensuring that the project is delivered on time, within budget and to the required standards, including communicating effectively with stakeholders
SAP Developer Specialist	Designs, develops, and customizes SAP applications and modules to optimize business processes and meet organizational requirements.
SAP ERP Functional Specialist	Analyzes business processes, configures SAP modules, and ensures the system aligns with organizational requirements to optimize operations.
SAP IS	Configures, implements, and supports the SAP Industry Solution for Utilities (IS-U) to manage utility-specific processes such as billing, meter management, and customer service.
SAP Security Specialist	Ensures SAP security protocols are met
Security Architect	Designs and implements comprehensive security strategies and architectures to protect JEN's systems, networks, and data from cyber threats.
Senior Business Analyst	Leads the analysis of business processes, gathers requirements, and delivers strategic solutions to drive organizational efficiency and project success.
Senior Test Analyst	Responsible for designing and executing tests, reporting defects/issues
SME	Responsible for providing subject matter expertise advice to design business and digital solutions for respective business/functional areas
SME Customer & Commercial SME	Responsible for providing subject matter expertise advice to design business and digital solutions for customer and commercial
SME Future Networks	Responsible for providing subject matter expertise advice to design business and digital solutions for future networks
SME Snr Grid Transformation Engineer	Responsible for providing subject matter expertise advice to design business and digital solutions for VEBM
Snr Grid Transformation Engineer	Leads the design, implementation, and optimization of modernized electrical grid systems to enhance efficiency, reliability, and integration of emerging energy technologies.
Solution Architect	Designs and oversees the implementation of technical solutions to address business needs.
Solution Designer	Responsible for end-to-end solution design and solution integrity

Role Title	Description
Test Analyst	Responsible for designing and executing tests, reporting defects/issues
Test Lead	Responsible for the establishment and execution of overall testing strategy and plans across all components
Test Manager/Automation Lead	Responsible for planning, execution, managing and improving the automation testing efforts to enhance testing efficiency and software quality
Tester General	Responsible for designing and executing tests, reporting defects/issues
webMethods	Designs, implements, and manages integrations between systems and applications to ensure seamless data flow and business process automation.
webMethods Integration Consultant	Designs, implements, and manages integrations between systems and applications to ensure seamless data flow and business process automation.
Wintel Engineer	Manages and supports Windows server environments and Intel-based systems, ensuring optimal performance, security, and reliability of IT infrastructure.
