

Roma to Brisbane Access Arrangement 2012–17

Queuing teleconference meeting record

This document is not a transcript. It is based on notes of the discussion taken by AER staff and is not a verbatim account. Given the nature of the document, not all comments made during the meeting are included

1.1.1 Background

The Australian Energy Regulator (AER) facilitated a teleconference on 22 June 2012 to discuss the revised queuing requirements for the Roma to Brisbane Pipeline Gas Transmission System (RBP). More information can be found at

<http://www.aer.gov.au/node/5197>.

1.1.2 Attendees

The RBP service provider APT Petroleum Pipelines Pty Limited (APTPPL) hosted the workshop in cooperation with the AER. Representatives from the following organisations participated:

- Origin Energy
- Stanwell.

1.1.3 Topics discussed during the teleconference

Existing capacity—first-come-first-served with a deposit to enter the queue

- Queue sitting—in the queue and during negotiations
- Capacity hoarding
- Proposed deposit to enter the queue
 - the magnitude of the deposit
 - circumstances in which the deposit should be refundable
- Senior management involvement in a user's queuing decisions
- How the existing capacity queue should function during the transitional period

Developable capacity—open season

- The role of a queue and an order of priority.
