

6 – 12 November 2022

Weekly Summary

Downstream wholesale gas market prices (marked M on the map below) decreased significantly in all four markets (percentage change from previous week shown on map). This week, there has been a significant decrease in demand in the Victorian, Sydney and Adelaide markets.

At the Wallumbilla upstream supply hub (marked H), the average price decreased at the WAL trading point and more significantly at the SEQ trading point. The map also includes equivalent National Electricity Market (NEM) prices.

Map: Gas Market Prices, LNG netback price (\$/GJ)*, NEM prices (\$/MWh)

Note: The LNG netback price is the 28 October 2022 assessment for the front month (December) forward LNG netback price assessed: <https://www.accc.gov.au/regulated-infrastructure/energy/gas-inquiry-2017-2025/lng-netback-price-series>

The prices on the map for SEQ, WAL and MOO reflect only trades day ahead, to highlight price differentials between market and arbitrage opportunities.

Trading in the Wallumbilla gas supply hub was concentrated around longer-term deliveries for products WAL (1012.9 TJ) this week (see section 6). Shorter-term trades also occurred at SEQ (107 TJ) and WAL (582 TJ). Longer-term trades were primarily strip products¹ for 2-10

¹ Daily products chained together across multiple delivery days.

day delivery periods across November (319 TJ), December (403.5 TJ) and January (290.4 TJ).²

Gas powered generation decreased in Queensland but increased in all other states. LNG export pipeline flows were higher this week, increasing to 3911 TJ/day on average (see more detailed map and table at figure 5.1). However, this coincided with a decrease in gas flows north from the southern states.

Long term statistics and explanatory material

The AER has published an [explanatory note](#) to assist with interpreting the data presented in its weekly gas market reports. The AER also publish a range of [longer term statistics](#) on the performance of the gas sector including gas prices, production, pipeline flows and consumer demand.

Market overview

Figure 1 sets out the average daily prices (\$/GJ) for the current week, and demand levels, compared to historical averages. Regions shown include the Victorian Declared Wholesale Market (or Victorian Gas Market - VGM) and for the Sydney (SYD), Adelaide (ADL) and Brisbane (BRI) Short Term Trading Market hubs (STTM).

Figure 1: Average daily prices and demand – all markets (\$/GJ, TJ)³

	Victoria		Sydney		Adelaide		Brisbane	
	Price	Demand	Price	Demand	Price	Demand	Price	Demand
06 Nov - 12 Nov 2022	10.83	335	11.07	223	12.53	43	12.64	110
% change from previous week	-49	-34	-48	-11	-44	-21	-37	3
22-23 financial YTD	22.36	711	24.24	292	24.72	64	23.55	96
% change from previous financial YTD	134	1	132	10	131	-1	132	2

Figure 2 sets out price and demand information for the voluntary Wallumbilla, South East Queensland and Moomba Gas Supply Hubs (GSH).

² These quantities also included a strip product traded for delivery over 11 November to the end of December, and a monthly product for delivery over January 2023.

³ Average daily quantities are displayed for each region. The weighted average daily imbalance price applies for Victoria.

Figure 2: Average prices and total quantity – Gas Supply Hubs (\$/GJ, TJ)⁴

	Moomba		South East Queensland		Wallumbilla	
	Price	Quantity	Price	Quantity	Price	Quantity
06 Nov - 12 Nov 2022	-	-	14.85	107	14.49	1595
% change from previous week	-	-	-21	71	-32	95
22-23 financial YTD	29.06	1054	24.04	1203	23.14	14283
% change from previous financial YTD	251	337	127	-35	125	118

Figure 3 illustrates the daily prices in each gas market, as defined in figures 1 and 2.

Figure 3: Daily gas market prices (\$/GJ)

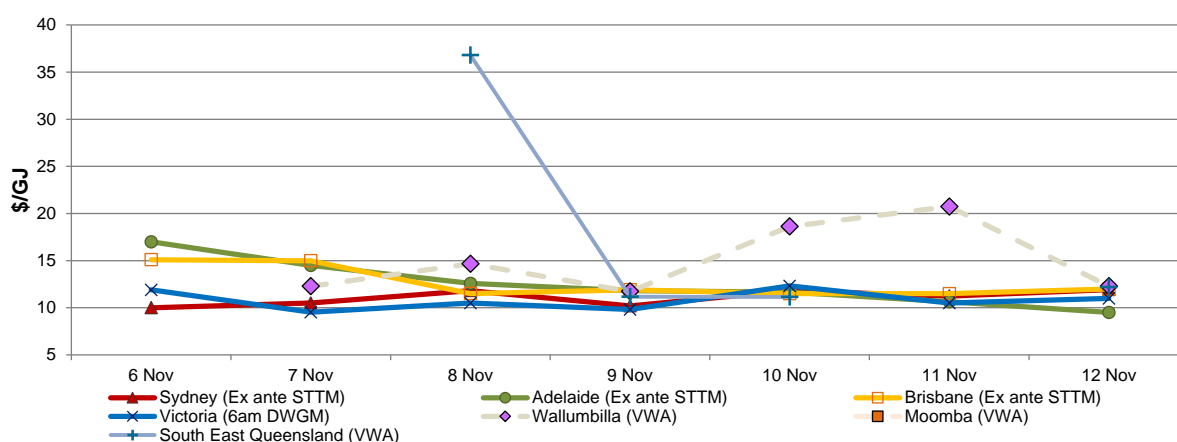

Figure 4 compares average ancillary market payments (for the VGM) and balancing gas service payments (STTM) against historical averages.

Figure 4: Average daily ancillary payments (\$000)

	Victoria Ancillary Payments*	Sydney MOS	Adelaide MOS	Brisbane MOS
06 Nov - 12 Nov 2022	-	20.21	12.62	1.01
% change from previous week	-	-45	-27	68
22-23 financial YTD		33.29	12.07	1.43
% change from previous financial YTD		30	123	90

* Ancillary payments reflect the compensation costs for any additional injections offered at a price higher than the market price. Note: only positive ancillary payments, reflecting system constraints will be shown here.

More detailed analysis on the VGM is provided in section 1.

⁴ The prices shown for the GSH in Moomba, South East Queensland and Wallumbilla are volume weighted average (VWA) prices for all products traded across the period. The total quantity contributing to the weighted price is displayed for these GSH. Reported values for Moomba are the aggregate of trades on the Moomba to Adelaide Pipeline (MAP) and the Moomba to Sydney Pipeline (MSP). Historic trades for RBP and SWQP are grouped under WAL, (including in-pipe trades on the RBP).

Figure 5 shows the quantity and volume weighted prices of products traded in the Gas Supply Hub locations at Moomba, South East Queensland and Wallumbilla.

Figure 5: Gas Supply Hub products total traded for the current week (\$/GJ, TJ)⁵

	Moomba		South East Queensland		Wallumbilla*	
	VWA price	Quantity	VWA price	Quantity	VWA price	Quantity
Balance of day	-	-	11.68	20.0	12.40	260.1
Daily	-	-	20.80	40.0	14.46	1071.9
Day ahead	-	-	11.14	47.0	11.75	139.0
Weekly	-	-	-	-	-	-
Monthly	-	-	-	-	22.25	124.0
Total	-	-	14.85	107.0	14.49	1595.0

* includes non-netted (off-market) trades.

Figure 6 shows Bulletin Board pipeline flows for the three LNG export pipeline facilities and the production output at related production facilities in the Roma region.

Figure 6: Average daily LNG export pipeline and production flows (TJ)*

	APLNG	GLNG	QCLNG	Total
Production	1474	923	1687	4084
Export Pipeline Flows	1651	1385	875	3911
% change from previous week (pipeline flows)	2	8	18	7
22-23 financial YTD flows	1380	1049	1177	3606

* Production quantities represent flows from facilities operated by APLNG, Santos and QGC. Gas from individual facilities may also supply the domestic market, other LNG projects or storage facilities.

⁵ Further information about new product trading locations in Victoria (Culcairn) and Sydney (Wilton) is available in section 6. Gas Supply Hub).

Detailed market analysis

Table 1: Key events this week

Date	Event	Market Affected	Description
17 Oct – 13 Nov	QCLNG ½ - 1 LNG train outage	East Coast (Supply)	Creates greater available domestic supply if production maintained.
12 Nov	High MOS payment	Sydney	MOS payment exceeded \$50,000 – large decrease MOS allocation on the EGP. Counteracting MOS due to increase MOS on the MSP.

QCLNG ½ - 1 LNG train outage continues

QCLNG's ½ - 1 LNG train continues and is scheduled for completion on 13 November.⁶ The outage creates greater available domestic supply if forecasted production levels continue. Pipeline flows on the Wallumbilla Gas Pipeline connected to the LNG facility at Curtis Island recovered to 875 TJ per day this week.

High MOS⁷ Service Payment on Sydney STTM

On 12 November in the Sydney market, a significant decrease MOS allocation on the EGP (11.4 TJ) and a counteracting increase MOS requirement on the MSP (1.84 TJ) resulted in significant MOS payments totalling \$54,316. The decrease MOS allocation on the EGP was driven by retailer and manufacturer over forecasted demand at the Sydney hub. The increase MOS requirement on the MSP was driven by increased demand of 12 TJ for backhaul.

⁶ Australian Energy Market Operator [LNG Maintenance Notice – QCLNG update](#), October 2022.

⁷ MOS is an ancillary service providing balancing gas on a pipeline where there is a difference between scheduled/nominated supply/demand and actual delivered gas quantities. Counteracting MOS occurs when one pipeline facility provides increase MOS services (additional supply to the hub) offsetting another pipeline providing decrease services (parking gas not delivered to the hub).

1. Victorian Declared Wholesale Market

In the Victorian gas market, gas is priced five times daily at 6 am, 10 am, 2 pm, 6 pm and 10 pm. The imbalance weighted price on a gas day tends towards the 6 am price⁸ which is the schedule at which most gas is traded.

The main drivers⁹ of price are demand forecasts and bids to inject or withdraw gas from the market. Figures 1.1 to 1.4 below show the daily prices, demand forecasts¹⁰, and injection/withdrawal bids for each of the five pricing schedules. Figure 1.5 provides information on which system injection points were used to deliver gas, in turn indicating the location and relative quantity of gas injection bids cleared through the market.

Ancillary payments for gas injected above the market price are shown above in figure 4.

Figure 1.1: Prices by schedule (\$/GJ)

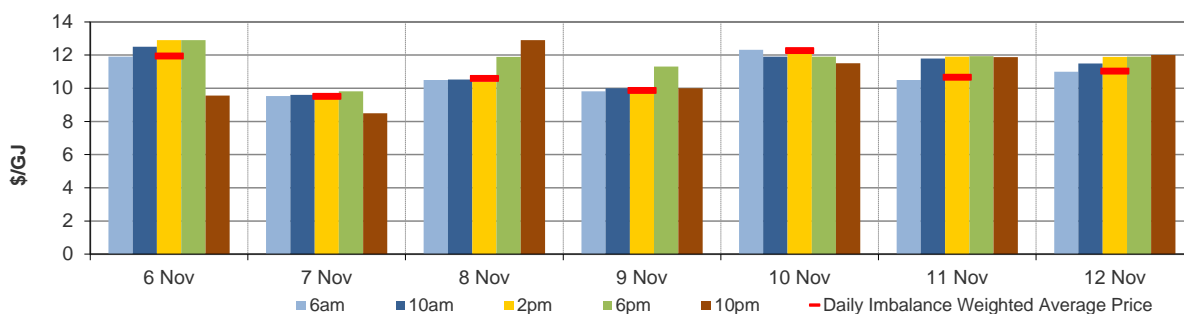

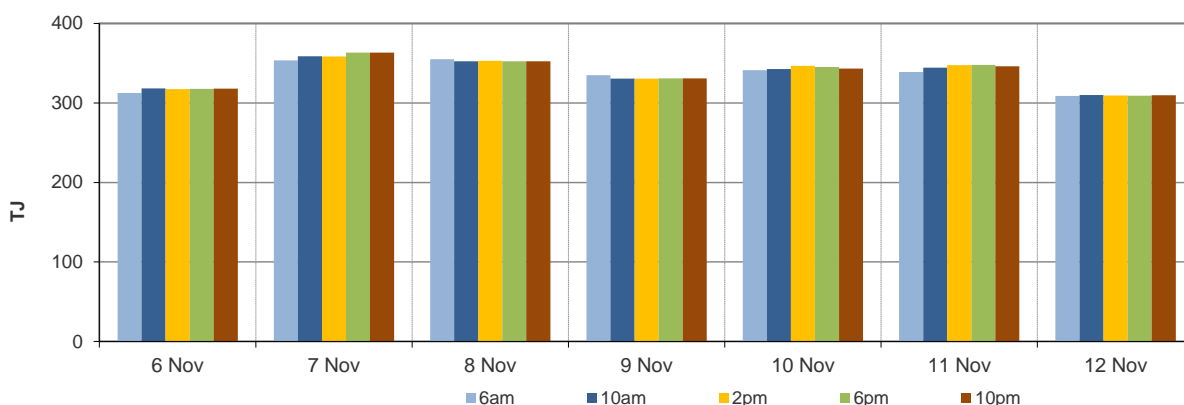

Figure 1.2: Demand forecasts (TJ)

⁸ Prices for subsequent schedules are applied only to the differences in scheduled quantities (imbalances) to calculate the weighted price. The 6 am price applies to the entire scheduled quantity in the initial schedule.

⁹ The price might also be affected by transmission or production (contractual) constraints limiting how much gas can be delivered from a locale or System Injection Point (SIP) from time to time.

¹⁰ These are market participants' aggregate demand forecasts adjusted for any override as applied by AEMO from time to time. These forecasts must be scheduled and cannot respond to price like withdrawal bids.

Figure 1.3: Injection bids by price bands (TJ)

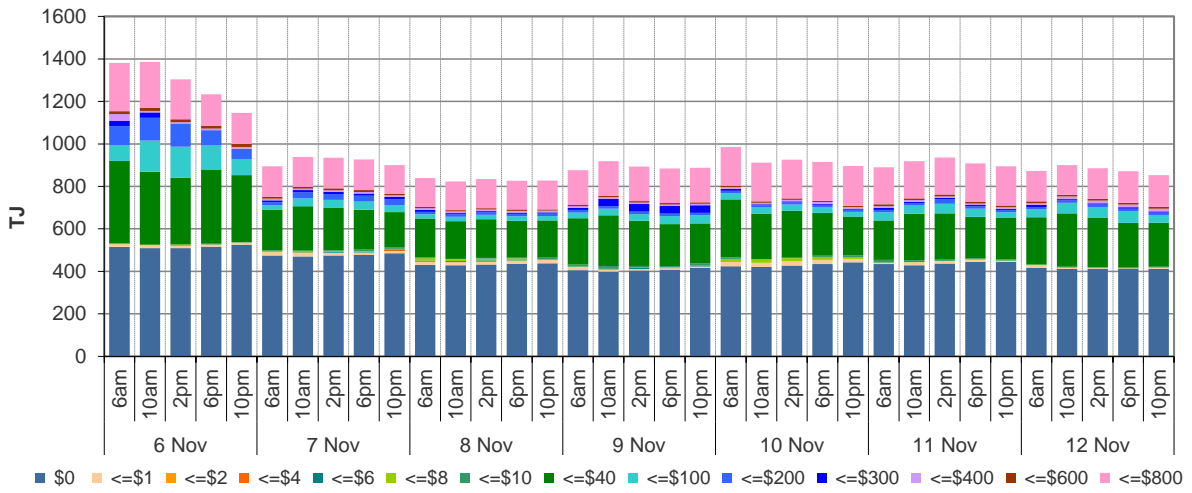

Figure 1.4: Withdrawal bids by price bands (TJ)

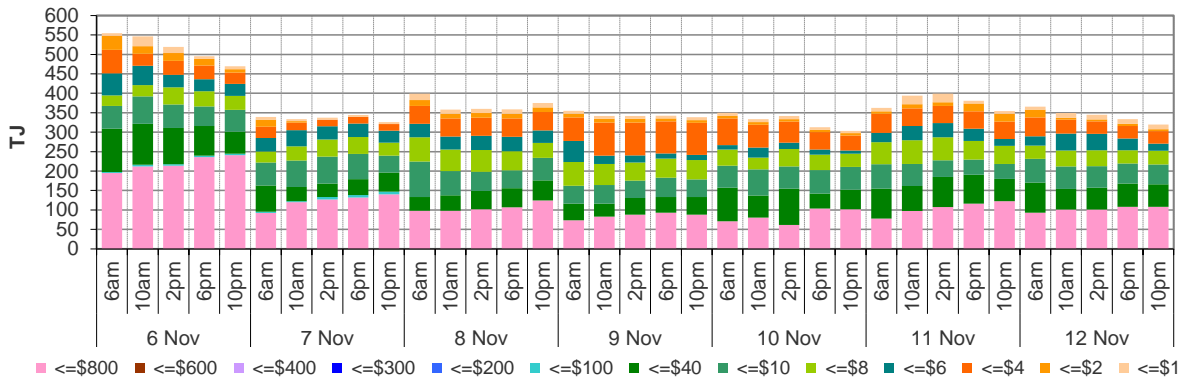

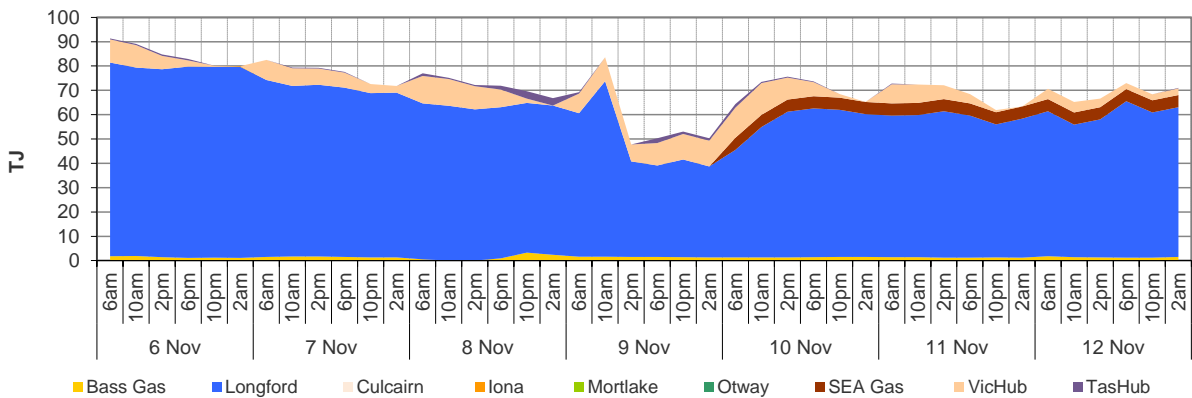

Figure 1.5: Metered Injections by System Injection Point (TJ)

Note that in figure 1.5, the last 8-hour schedule from 10 pm has been separated into two 4-hour blocks to provide a consistent comparison with earlier scheduled injection volumes.

2. Sydney STTM

In each STTM hub, a daily gas price is calculated before the gas day (the ex ante price) and after the gas day (the ex post price). The main drivers of these prices are participant demand forecasts and offers to inject or bids to withdraw gas traded at the hub.¹¹ Divergences in ex ante and ex post prices for a gas day may occur due to differences in scheduled (forecast) and allocated (actual) quantities. Pipeline acronyms are defined in the [user guide](#).

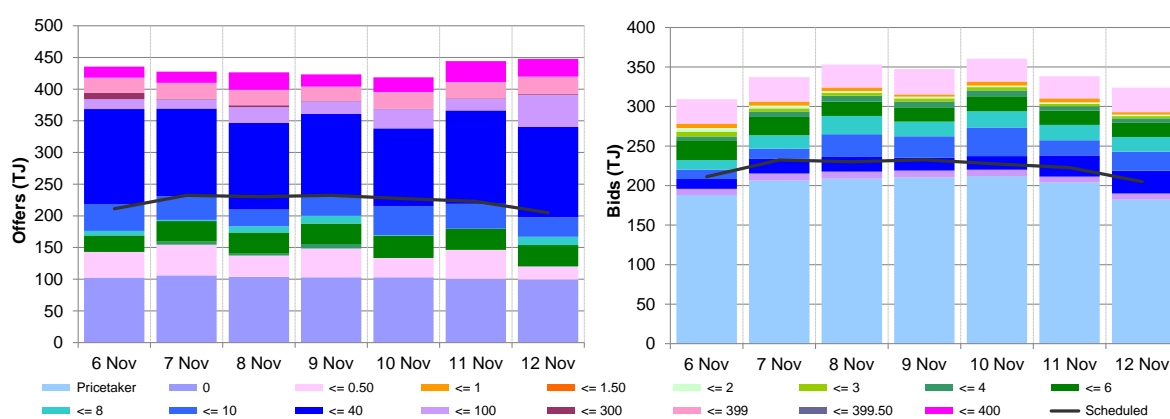

Market Operator Service balancing gas (MOS) payments arise because the amount of gas nominated on pipelines for delivery on a gas day will either exceed or fall short, by some amount, of the amount of gas consumed in the hub. In such circumstances, MOS payments are made to participants for providing a service to park gas on a pipeline or to loan gas from a pipeline to the hub.¹²

Figures 2.1 and 2.2 show daily prices, demand, offers and bids. Figures 2.3 and 2.4 show gas scheduled and allocated on pipelines to supply the hub, indicating the location and relative quantity of gas offers across pipelines and also the amount of MOS allocated for each pipeline.

Figure 2.1: SYD STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	10.00	10.50	11.82	10.20	11.82	11.25	11.93
Ex ante quantity (TJ)	211	232	230	233	227	223	205
Ex post price (\$/GJ)	10.00	10.85	11.02	10.00	11.49	10.75	11.93
Ex post quantity (TJ)	216	237	220	226	223	213	207

Figure 2.2: SYD daily hub offers and bids in price bands (\$/GJ)

¹¹ The main driver of the amount of gas scheduled on a gas day is the 'price-taker' bid, which is forecast hub demand that cannot respond to price and which must be delivered, regardless of the price.

¹² MOS service payments involve a payment for a MOS increase service when the actual quantity delivered exceeds final gas nominations for delivery to a hub, and a payment for a MOS decrease service when the actual quantity delivered is less than final nominations. As well as a MOS 'service' payment, as shown in figure 2.4, MOS providers are paid for or pay for the quantity of MOS sold into the market or bought from the market (MOS 'commodity' payments/charges).

Figure 2.3: SYD net scheduled and allocated gas hub supply (excluding MOS)

Figure 2.3 shows the daily scheduled and allocated quantities sorted by facility for Sydney this week. For a more detailed description of this figure, please refer to the user guide.

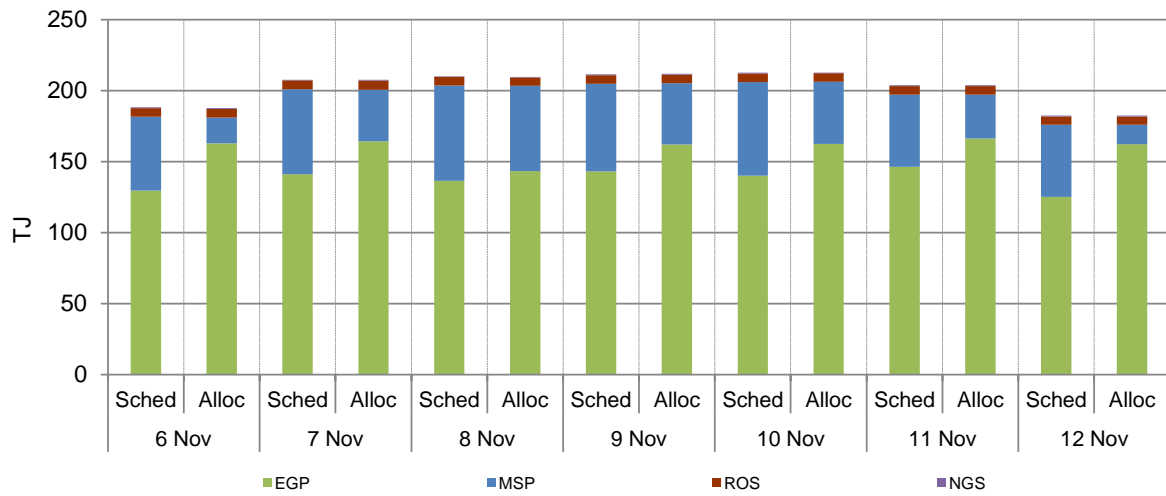

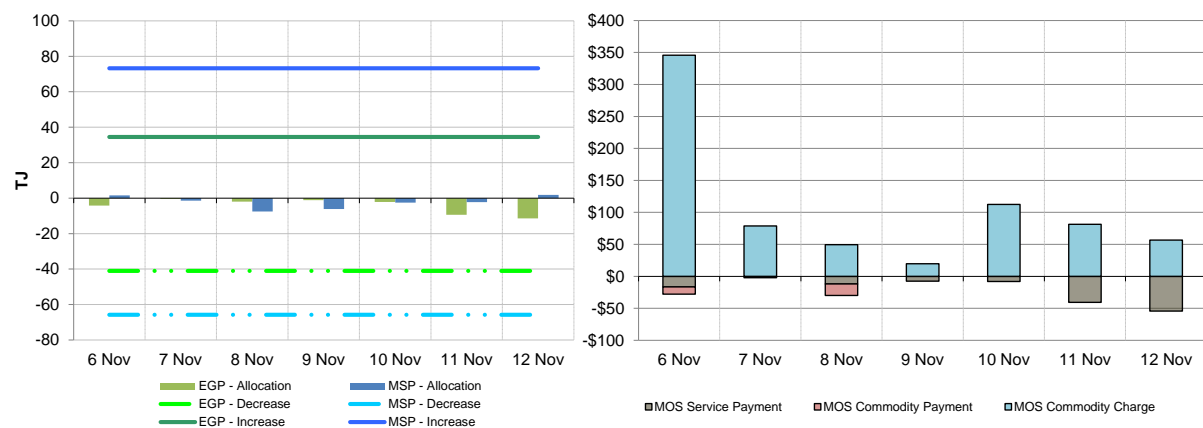

Figure 2.4: SYD MOS allocations (TJ), service payments and commodity payments/charges (\$000)¹³

¹³ The commodity cost of MOS illustrated on the right of the figure represents the commodity quantity at the D+2 ex ante price. Commodity payments and charges for a given gas day relate to quantities traded two days earlier. That is, the commodity cost for services provided on Sunday will appear in the chart for Tuesday, when the D+2 price is set. In contrast, service payments are shown alongside the day they occurred.

3. Adelaide STTM

The Adelaide STTM hub functions in the same way as the Sydney STTM hub. The same data that was presented for the Sydney hub is presented for the Adelaide hub in the figures below.

Figure 3.1: ADL STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	16.99	14.49	12.59	11.81	11.67	10.64	9.50
Ex ante quantity (TJ)	44	46	45	47	42	39	38
Ex post price (\$/GJ)	15.02	13.75	12.25	9.10	11.29	10.64	9.15
Ex post quantity (TJ)	37	41	38	36	40	36	37

Figure 3.2: ADL daily hub offers and bids in price bands (\$/GJ)

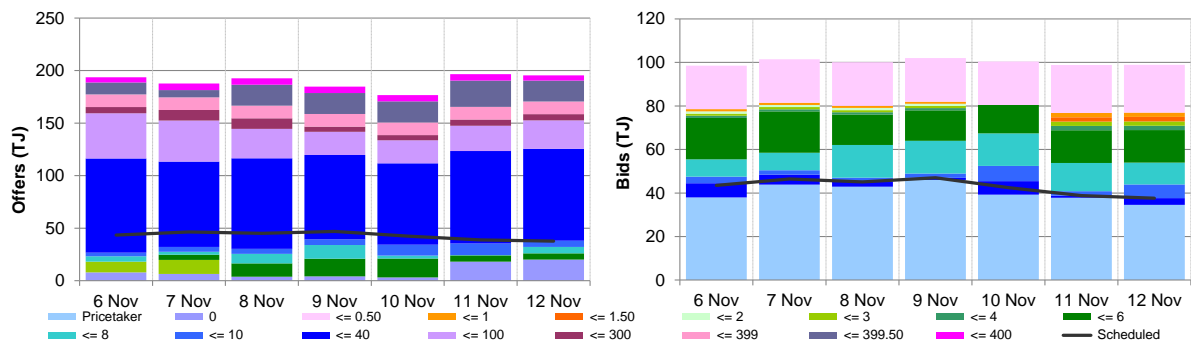

Figure 3.3: ADL net scheduled and allocated gas hub supply (excluding MOS)

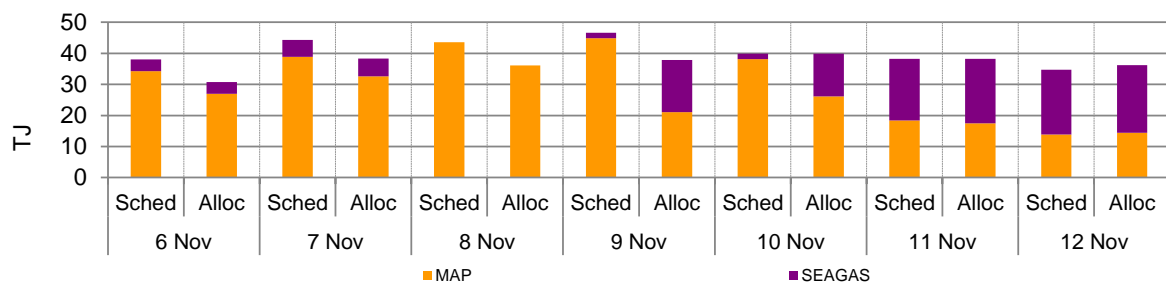

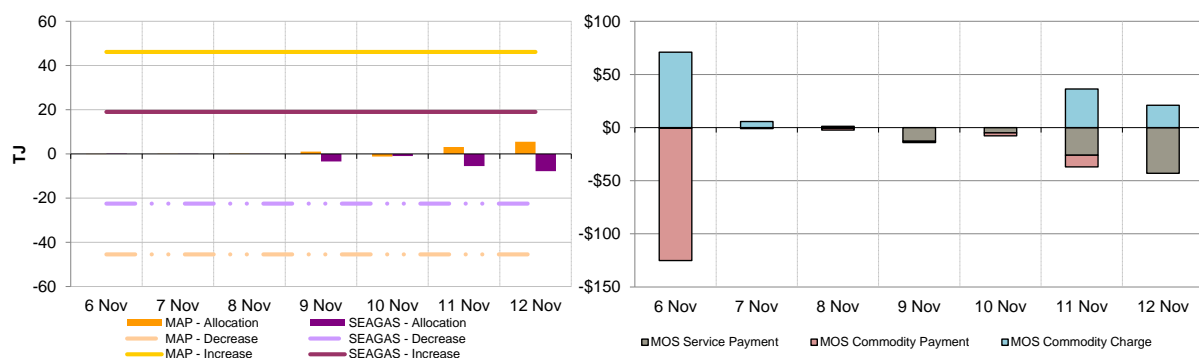

Figure 3.4: ADL MOS allocations (TJ), service payments and commodity payments/charges (\$000)

4. Brisbane STTM

The Brisbane STTM hub functions in the same way as the Sydney STTM hub. The same data that was presented for the Sydney hub is presented for the Brisbane hub in the figures below.

Figure 4.1: BRI STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	15.10	14.99	11.51	11.91	11.50	11.50	11.99
Ex ante quantity (TJ)	89	107	119	123	122	116	90
Ex post price (\$/GJ)	15.01	16.90	12.31	11.51	11.10	11.50	12.03
Ex post quantity (TJ)	86	115	126	122	120	115	91

Figure 4.2: BRI daily hub offers bids in price bands (\$/GJ)

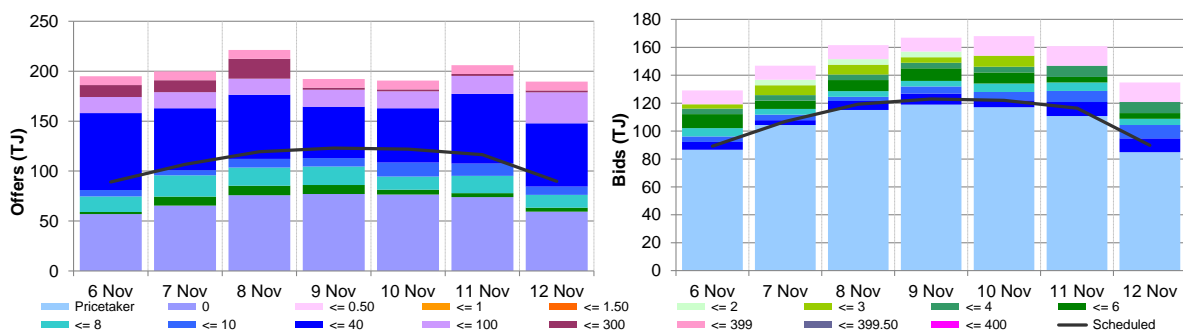

Figure 4.3: BRI net scheduled and allocated gas hub supply (excluding MOS)

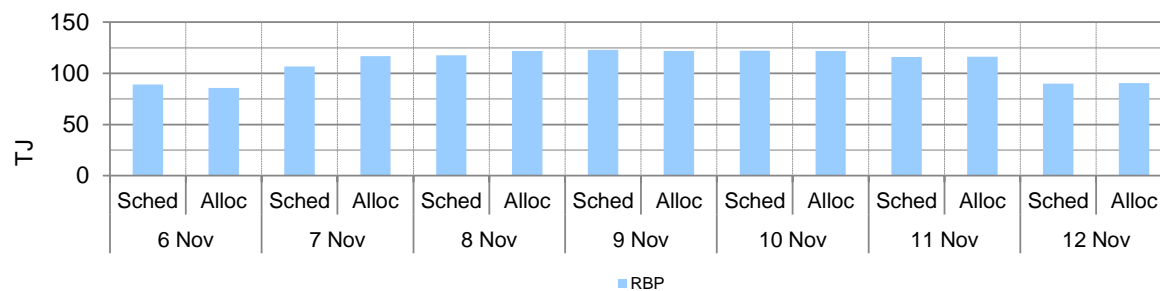

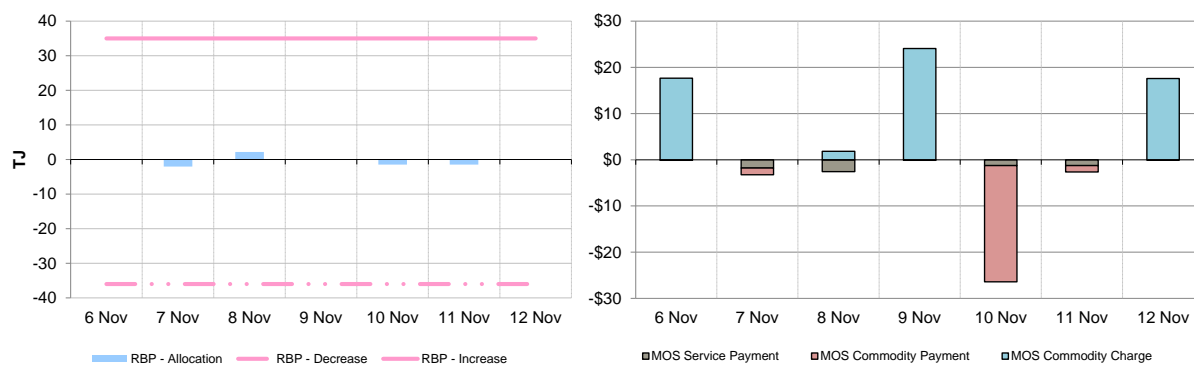

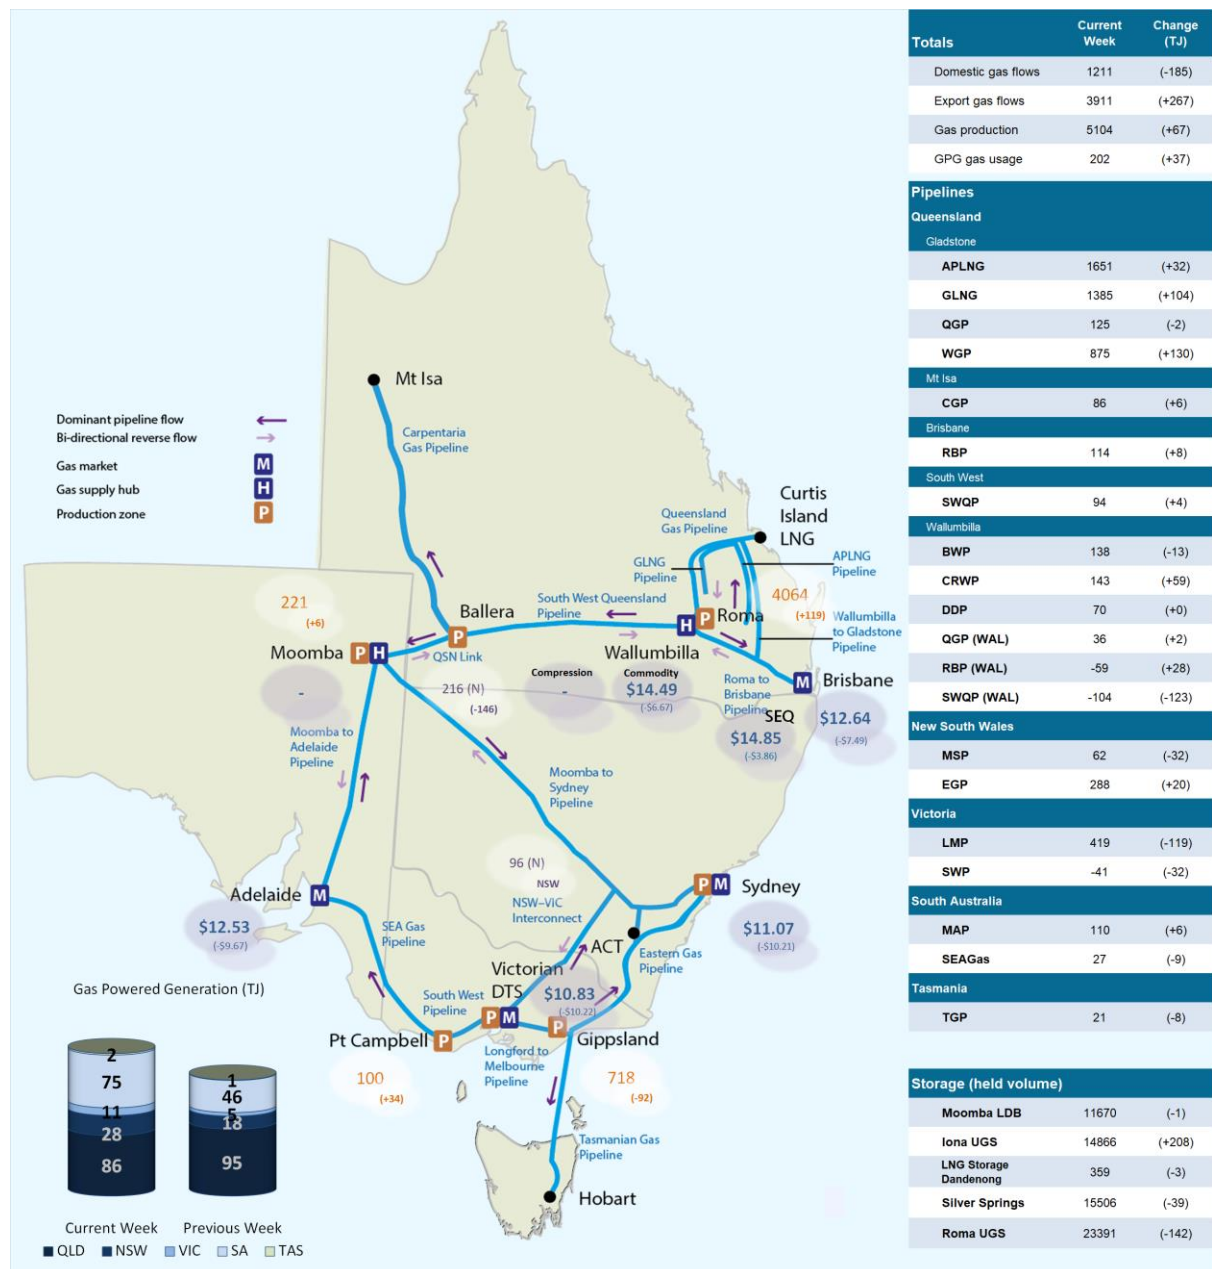

Figure 4.4: BRI MOS allocations (TJ), service payments and commodity payments/charges (\$000)

5. National Gas Bulletin Board

Figure 5.1 shows average daily actual flows for the current week¹⁴ from the Bulletin Board (changes from the previous week's average are shown in brackets). Average daily prices¹⁵ are provided for gas markets and gas supply hubs. Average daily quantities are provided for gas powered generation for each region.

Figure 5.1: Gas market data (\$/GJ, TJ/day); Bulletin Board flows (TJ/day)¹⁶

¹⁴ Domestic gas flows are calculated as the total of: SA = MAP + SEAGAS; VIC = SWP + LMP + (flows towards Victoria on the 'NSW-VIC interconnect'); NSW/ACT = EGP + MSP; TAS = TGP; QLD (Brisbane) = RBP; QLD (Mt Isa) = CGP; and QLD (Gladstone) = QGP.

Export gas flows are calculated as the total of: the APLNG pipeline; the GLNG pipeline; and the Wallumbilla to Gladstone pipeline.

GPG volumes may include gas usage that does not show up on Bulletin Board pipeline flows.

¹⁵ GSH supply is the average daily volume of gas 'traded', while price is a volume weighted average. Optional hub services (for compression and redirection) are shown separately from commodity trades.

¹⁶ Net flows are shown for Bulletin Board facilities, as outlined in the [user guide](#).

6. Gas Supply Hub

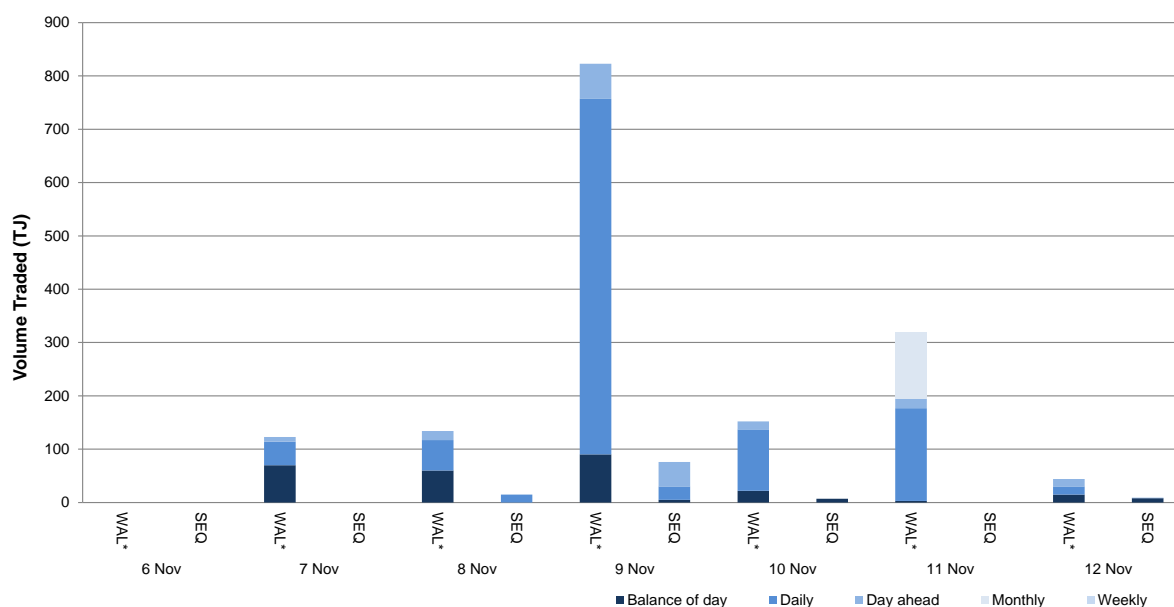

The gas supply hub was established at Wallumbilla in March 2014 to facilitate the voluntary trading of gas between participants, with products listed for sale and purchase at delivery points on three major connecting pipelines. There are separate products for each trading location and delivery period (daily, day-ahead, balance-of-day, weekly and monthly products).¹⁷

The Moomba hub commenced operation from June 2016 to further facilitate trading on the MAP and MSP, with trading between the two hubs on the SWQP via a spread product (representing the price differential between the hubs). From October 2016, the addition of a Wallumbilla Compression Product was introduced to facilitate the supply hub's transition from three different trading locations into one. From March 2017, Wallumbilla transitioned into an optional hub services model, replacing the three trading locations (QGP, SWQP and RBP) with a single product at Wallumbilla (WAL) and an in-pipe RBP trading location at South East Queensland (SEQ). On 28 January 2021, trading locations at Wilton (Sydney) and Culcairn (Victoria) were introduced.

This week there were 126 trades for 1702 TJ of gas at a volume weighted price of \$14.51/GJ. These consisted of 107 trades at WAL (1595 TJ at \$14.49/GJ) and 19 trades at SEQ (107 TJ at \$14.85/GJ). There were 11 spread trades this week between SEQ and WAL.

Figure 6.1 shows the quantity of gas traded by product type for each trading day on pipeline trading locations in the Wallumbilla and Moomba Gas Supply Hubs.¹⁸

Figure 6.1: GSH traded quantities

¹⁷ Additional information on trading locations and available products is detailed in the [user guide](#).

¹⁸ Non-netted (off-market) trades, allowing the selection of specific delivery point at a trading location, are included with other Wallumbilla trades (WAL*). Non-netted trades at Moomba are shown separately (MOO) from MAP and MSP.

7. Day Ahead Auction

The DAA is a centralised auction platform providing the release of contracted but un-nominated transportation capacity on designated pipelines and compression facilities across eastern Australia. The auction enables transportation facility users to procure residual capacity on a day-ahead basis after nomination cut-off, with a zero reserve price and compressor fuel provided.

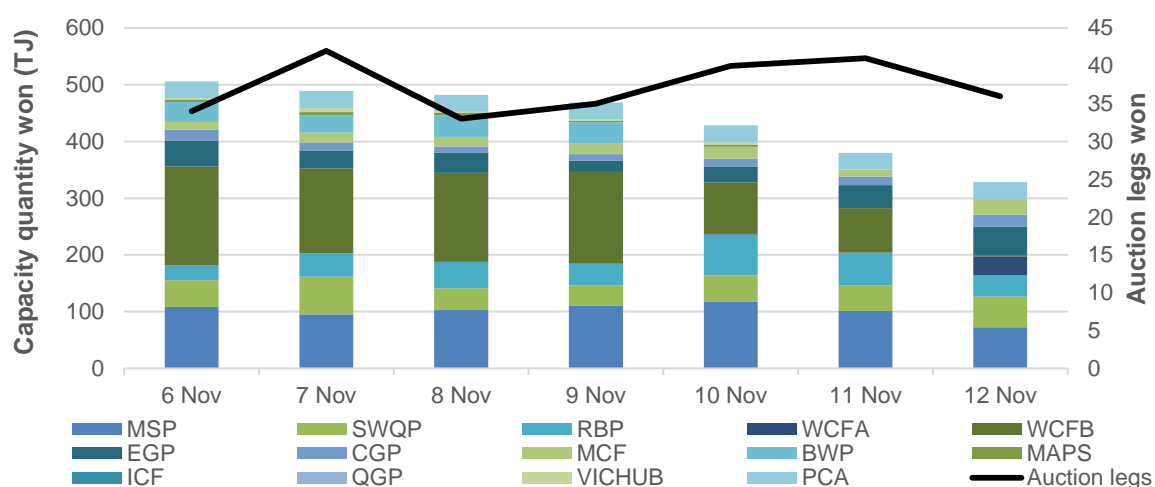

Participants may bid in to the DAA in order to procure the following services:

- park services;
- forward haul pipeline services with products offered in both directions on bi-directional pipelines;
- interruptible backhaul services; and
- stand-alone compression services.

This week, 15 participants took part in the DAA, winning 3083 TJ of capacity across 12 different facilities.

Figure 7.1 shows the quantities of gas and auction legs won through the DAA by gas date, with gas deliverable up to the level of capacity procured. Auction legs reflect each individual facility transaction.¹⁹

Figure 7.1: DAA traded quantities (TJ) and auction legs won

Australian Energy Regulator
December 2022
