**Response to Powercor Revised Proposal 2021-2026: Request to upgrade Tyrendarra, Strathdownie Cape Bridgewater and Gorae West to three-phase power**

The purpose of this letter is to express support for upgrading single phase power to three phase infrastructure in the Tyrendarra area of South West Victoria. To achieve our regions' goals of renewable energy and water sustainability leadership, as well as to maintain and enhance our position as a world class tourism destination and Victoria's largest food and fibre producer, we need infrastructure that supports innovation and business growth.

*Total Dairy Service is a major supplier of milking and grain processing equipment to South West Victorian farmers. Single phase electricity prohibits farmers from being able to cool large volumes of freshly harvested milk to industry standards, little own harvest the milk in an efficient cost-effective way to begin with. Processing of grain for animal fodder onsite is the most economical way to enhance milk production, lamb and beef fattening for economical farming performance and this process is almost impossible with single phase power.*

This investment has been called for by members of our community over a period spanning six years, and we are pleased to see it recommended in Infrastructure Victoria's Draft 30-year Infrastructure Strategy. Upgrading less than 100kms of single phase line supplying 1,130 Tyrendarra, Strathdownie, Cape Bridgewater and Gorae West customers directly is essential to capitalise on the Great South Coast's competitive advantages for economic growth and to unlock downstream economic and social value.

Business beyond the 1000-plus directly benefiting from the upgrade will be more resilient to economic shocks such as the pandemic and climate change events. If delivered, the upgrade will allow businesses and individuals to unlock new industry growth opportunities and improve macro-economic outcomes by increasing access to jobs and upskilling, and provide infrastructure that enables investment to reduce the cost of energy long-term. In the same vein, the community, sporting and education users of this network will have an enhanced capacity to deliver positive social outcomes.

We recognise this infrastructure is vital to further improve our natural resource stewardship as food, forestry and aquaculture producers, as well as to drive whole-of-region prosperity through the benefits accrued to affiliated industries such as tourism, where food plays a key role, and the preservation of our natural environment.

The 2019-2020 Victorian Food and Fibre Export Performance Report showed that Victoria delivered a record \$14.5 billion in exports and is well on target to reach its target of \$20 billion food and fibre exports by 2030. A positive milestone for farmers and Victoria that produces over a quarter of Australia's food and fibre exports, with most of this production generated within the Great South Coast. This result and growth projection demonstrates the strength of our region, however it is contingent on the infrastructure being in place to enable investment, diversification and innovation.

We consider it is important to re-evaluate the role of population density as a deciding factor in determining the value of investments in power infrastructure upgrades. This model appears to place regional Victoria at a considerable disadvantage, which is disappointing considering regional Victoria has been acknowledged as critical in maintaining Victoria's economic resilience and food supply chain integrity during the pandemic. We encourage you to work with local stakeholders to review this process to ensure fairness for all Victorians.

We urge you to empower Victoria's Great South Coast businesses, residents and wider community to invest, build resilience and sustainability, and take advantage of opportunities to strengthen supply chains and local manufacturing.

Yours sincerely,

Bevan Walker
