# **Annual Regulatory Information Notice 2015**

#### Table of contents

1.	Introduction	
	Preparation process	
2.	Compliance with AER requirements	2
2.1	Compliance with Schedule 1 of the Notice	
2.2	Compliance with Schedule 2 of the Notice	16
2.3	Compliance with the appendices of the Notice	17
Ap	pendices	
Арр	pendix A – Annual Financial RIN Excel Template	
Арр	pendix B – Annual Non-Financial RIN Excel Template	
Арр	pendix C – Basis of preparation	

Appendix D – UED Statutory Accounts

Appendix E – Reconciliation of the RIN to the Statutory Accounts

Appendix F – Accounting policies and principles

Appendix G – Explanation of material differences

Appendix H – Demand Management Incentive Scheme Report 2015

Appendix I – Statutory declaration

Appendix J – Audit reports

Appendix K – Charts

Appendix L – Confidentiality templates

#### 1. Introduction

United Energy is required to respond to the Annual Regulatory Information Notice (RIN), issued on 6 August 2014 under Division 4 of Part 3 of the *National Electricity Law* (NEL).

The Notice requires United Energy to provide, prepare and maintain the information in the manner and form specified in the Notice issued on 6 August 2014. The AER requires the information for the performance or exercise of a function or power conferred on it under the NEL or the *National Electricity Rules* (NER).

The Excel templates in which the information is provided, were issued as final by the AER on the 6 August 2014.

The information contained in the templates relates to the 2015 calendar year only.

#### 1.1 Preparation process

The following diagram provides a high-level summary of UE's approach to preparing the 2015 Annual RIN.

Stage 1	Stage 2	Stage 3	Stage 4	Stage 5		Stage 6	
Allocation of	Data	Internal	External	CEO, Audit Risk	>	Submission	
responsibilities for	collection	review	audit	Committee and		to the AER	
data collection	and collation			Board approval			

United Energy's response is audited in accordance with Appendix E of the Notice. The audit report and information provided by the AER is verified by statutory declaration.

#### 2. Compliance with AER requirements

#### 2.1 Compliance with Schedule 1 of the Notice

The table below outlines how United Energy has complied with the requirements of Schedule 1 of the Notice.

Cla	use detail	United Energy response
1.	Regulatory accounting statements and non-financial information	
	1.1. Provide:	Appendix A – Annual Financial RIN Excel Template
a)	the Regulatory Accounting Statements, being the information required in the worksheets in the Microsoft Excel workbook attached at Appendix B, as amended by the AER on 6 August 2014;	Appendix B – Annual Non-Financial RIN Excel Template
b)	the non-financial information required in the worksheets in the Microsoft Excel workbook attached at Appendix C, as amended by the AER on 6 August 2014;	
c)	a Microsoft Excel workbook that reconciles and explains all adjustments between the Statutory Accounts and the Regulatory Accounting Statements. United Energy must separately list each adjustment to the Statutory Accounts made to derive the Regulatory Accounting Statements, and for each adjustment made:  i. specify the amount of the adjustment  ii. describe the nature and basis of each adjustment	Appendix E – Reconciliation of the RIN to the Statutory Accounts
d)	a Basis of Preparation demonstrating how United Energy has complied with the Notice, in accordance with this Notice and the Principles and Requirements at Appendix A.	Appendix C – Basis of preparation
е)	the Regulatory Accounting Principles and Policies and the Capitalisation Policy for the Relevant Regulatory Year.	Appendix F2 – Cost Allocation Methodology (CAM) and Capitalisation Policy
f)	a statement of the policy for determining the allocation of overheads in accordance with the approved Cost Allocation Method for the relevant Regulatory year.	In accordance with the CAM

Cla	use detail	United Energy response
1.2	Identify all changes between the Regulatory Accounting Principles and Policies provided in the response to paragraphs 1.1(e). For each change identified:	Not applicable – no differences
a)	explain the nature of and the reasons for the change;	
b)	quantify the effect of the change on the Regulatory Accounting Statements for the current Relevant Regulatory Year.	
1.3	Identify all changes between the statements of the policy for determining the allocation of overheads in accordance with the approved <i>Cost Allocation</i> Method provided in the response to paragraphs 1.1(f). For each change identified:	Not applicable – no differences
a)	explain the nature of and the reasons for the change;	
b)	quantify the effect of the change on the Regulatory Accounting Statements for the current Relevant Regulatory Year.	
1.4	Identify material difference (where the difference is greater than or equal to 10 per cent) between the amount provided for in the 2011-15 Distribution Determination for the following items:	Appendix G – Explanation of material differences
a)	total actual revenue and total forecast revenue;	
b)	total actual operating expenditure and total forecast operating expenditure;	
c)	total actual maintenance expenditure and total forecast maintenance expenditure;	
d)	total actual capital expenditure and total forecast capital expenditure; and	
е)	total actual energy sales and total forecast energy sales.	
1.5	Explain the reasons underlying the changes in expected operational activities or drivers that caused each material difference identified in the response to paragraph 1.4.	Appendix G – Explanation of material differences
1.6	Identify each material differences (where the difference is equal to or greater than 10 per cent) between the target performance measure specified in the service target performance incentive scheme and actual performance reported in the response paragraph 1.1(b).	Appendix G – Explanation of material differences

Clause detail	United Energy response
1.7 Explain the reasons underlying the changes that caused each material difference identified in the response to paragraph 1.6.	Appendix G – Explanation of material differences
<ul> <li>1.8 Where it is not possible to provide the information in Schedule 1 as required by the Notice, provide:</li> <li>a) an estimate, using best endeavours to generate the most appropriate estimate; and</li> <li>b) the basis for this estimate, explaining why it is the most appropriate estimate; or</li> <li>c) if it is not possible to provide an estimate, explain why the information as required by this notice has not been provided, and why an estimate is not able to be derived.</li> </ul>	Appendix A – Annual Financial RIN Excel Template Appendix B – Annual Non-Financial RIN Excel Template Appendix C – Basis of preparation
2. Compliance     2.1 Explain the procedures and processes used by United Energy to ensure that the distribution services have been classified as determined in the 2011-15 Distribution Determination.	UE has classified distribution services in accordance with the CAM and Capitalisation Policy approved by the AER in line with the 2011-15 Distribution Determination.
2.2 Explain the procedures and processes used by United Energy to ensure that the negotiated service criteria, as set out in the 2011-15 Distribution Determination, have been applied.	Negotiated service criteria have been applied in accordance with the CAM and Capitalisation Policy approved by the AER in line with the 2011-15 Distribution Determination.
2.3 Describe the process United Energy has in place to identify negative change events under clause 6.6.1(f) of the NER and the materiality threshold applied to these events.	Each business area holds responsibility for identifying negative change events under clause 6.6.1(f) of the NER. The respective General Manager formally attests to compliance with 6.6.1 (f) of the NER during the RIN reporting period.  The materiality threshold applied is 1 per cent of 1 per cent of the smoothed forecast revenue specified in the final decision for the applicable regulatory year(s), pro rata for the applicable event period.

Clause detail	United Energy response					
3. Cost allocation to regulated distribution business						
<ul> <li>3.1 Identify each Item in the Regulatory Accounting Statements that is:</li> <li>a) not allocated on a directly attributable basis but is allocated on a causation basis to the distribution business; or</li> <li>b) not allocated on a directly attributable basis and cannot be allocated on a causation basis to the distribution business.</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.					
<ul> <li>3.2 For each Item identified in the response to paragraphs 3.1(a):</li> <li>a) state the amount of the item that has been allocated;</li> <li>b) explain the method of allocation and reasons for choosing that method; and</li> <li>c) state the numeric amount of the allocator(s) used.</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.					
<ul> <li>3.3 For each Item identified in the response to paragraphs 3.1(b):</li> <li>a) state its amount;</li> <li>b) state whether it was material;</li> <li>c) explain the method of allocation and reasons for choosing that method; and</li> <li>d) explain the reason(s) why it cannot be allocated on a causation basis.</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.					
4. Cost allocation to service segments						
<ul> <li>4.1 Identify each item in the Regulatory Accounting Statements that is:</li> <li>a) Not allocated on a directly attributable basis but is allocated on a causation basis from the distribution business to a service segment; and</li> <li>b) Not allocated on a directly attributable basis and cannot be allocated on a causation basis from the distribution business to a service segment.</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.					

Clause detail	United Energy response
<ul> <li>4.2 For each Item identified in the response to paragraphs 3.1(a):</li> <li>a) state the amount of the item that has been allocated;</li> <li>b) explain the method of allocation and reasons for choosing that method; and</li> <li>c) state the numeric amount of the allocator(s) used.</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.
<ul> <li>4.3 For each Item identified in the response to paragraphs 3.1(b):</li> <li>a) state its amount;</li> <li>b) state whether it was material;</li> <li>c) explain the method of allocation and reasons for choosing that method; and</li> <li>d) (explain the reason(s) why it cannot be allocated on a causation basis.</li> <li>5. Related Party Transactions</li> </ul>	All costs have been directly allocated. Refer to Appendix F – Cost allocation to regulated distribution business and cost allocation to service segments.
5.1 Identify each Related Party to which a transaction has been conducted	Appendix A – Tab 20
5.2 Identify each transaction relating to the provision of standard control services, alternative control services, AMI or negotiated distribution services between United Energy and a Related party, where the transaction amount is greater than five per cent of the relevant total expenditure or revenue category. Relevant categories are standard control revenues, alternative control revenues, AMI revenues, negotiated distribution services revenues, standard control capex, alternative control capex, AMI capex, standard control operation expenditure, standard control maintenance expenditure, alternative control maintenance expenditure, AMI operations expenditure, AMI maintenance expenditure and negotiated distribution services expenditure.	Appendix A – Annual Financial RIN Excel Template – Tab 20
<ul><li>5.3 For each transaction identified in the response to paragraph 5.2:</li><li>a) State the name of the Related Party;</li></ul>	Appendix A – Annual Financial RIN Excel Template – Tab 20
b) Identify any other parties involved;	

Cla	use detail	United Energy response
c)	Explain the nature and purpose of the transaction, including the good(s) or service(s) provided by the Related Party;	
d)	State the actual costs incurred by the Related Party in providing good(s) or service(s), not including any profit margin or management fee incurred by <i>United Energy;</i>	
e)	Explain how the actual costs of the good(s) or service(s) incurred was determined;	
f)	Explain how the actual costs of the good(s) or service(s) incurred is reflected in the Regulatory Accounting Statements;	
g)	Identify the Asset Category, Maintenance Cost category or Operating cost category to which the actual costs) is allocated; and	
h)	Explain the basis upon which the actual costs of the good(s) or service(s) were allocated, as identified in the response to paragraph (f), and state the quantum of any allocator applied.	
6. C	Capitalisation policy	
6.1	Identify all changes between the Capitalisation Policies provided in the response to paragraph 1.1 (e).	Not applicable – No changes to the capitalisation policy
6.2	For each change identified in the response to paragraph 6.1:	
	a) state, if any, the financial impact of the change;	
	b) state the reasons for the change;	
	c) explain the effect of the change, if any, on the actual operating expenditure, actual maintenance expenditure and actual capital expenditure incurred, in comparison to the forecast operating expenditure, forecast maintenance expenditure and forecast capital expenditure determined in the 2011-15 Distribution Determination during the Relevant Regulatory year.	
7. 0	Demand Management Incentive Allowance	
7.1	Identify each demand management project or program for which United Energy seeks approval.	Appendix H – Demand Management Incentive Scheme Report – 2015
7.2 a)	For each demand management project or program identified in the response to paragraph 7.1: explain:	Appendix H – Demand Management Incentive Scheme Report – 2015

Clause	detail	United Energy response
i.	how it complies with the Demand Management Incentive Allowance criteria set out at section 3.1.3 of the demand management incentive scheme;	
ii.	its nature and scope;	
iii.	its aims and expectations;	
iv.	the process by which it was selected, including its business case and consideration of any alternatives;	
v.	how it was/is to be implemented;	
vi.	its implementation costs; and	
vii.	any identifiable benefits that have arisen from it, including any off peak or peak demand reductions	
b) co	nfirm that its associated costs are not:	Appendix H – Demand Management Incentive Scheme Report – 2015
i.	recoverable under any other jurisdictional incentive scheme;	
ii.	recoverable under any other Commonwealth or State Government scheme	
iii.	included in the forecast capital or operating expenditure approved in the 2011–15 Distribution Determination or recoverable under any other incentive scheme in that determination; and	
rea for	plain any assumptions and/or estimates used in the calculation of forgone revenue, demonstrating the sonableness of those assumptions and/or estimates in calculating forgone revenue, including the reasons United Energy's decision to adjust or not to adjust for other factors and the basis for any such ustments.	Appendix H – Demand Management Incentive Scheme Report – 2015
	te the total amount of the Demand Management Incentive Allowance spent in the Relevant Regulatory Year, dexplain how it was calculated.	Appendix H – Demand Management Incentive Scheme Report – 2015
8. Adva	nced Metering Infrastructure	
	scribe each efficiency improvement made to United Energy's operations directly or indirectly arising from associated with the roll out of the Advanced Metering Infrastructure.	Delivering Alternative Control Services at lower cost to consumers and in a more timely manner:

Clause detail	United Energy response
<ul><li>8.2 For each efficiency improvement identified in the response to paragraph 8.1:</li><li>a) Explain how it arises from or is associated with the roll out of the Advanced Metering Infrastructure; and</li><li>b) If quantifiable, state its amount.</li></ul>	More than 50,000 connections and disconnections were completed remotely in 2015 using the contactor in the AMI meter. Charges paid by customers for these services have been reduced by more than \$30 for each transaction, delivering aggregate savings to customers to date of over \$1.5 million for this activity alone;
	<ul> <li>More than 2,500 unnecessary truck visits to customers' premises have been avoided in 2015 by utilising the AMI meter to remotely confirm supply status using the ping functionality. The savings to these customers range from \$51 to \$115 per truck visit – where the higher amount applies to truck visits outside normal business hours;</li> </ul>
	<ul> <li>More than 5,000 remote meter reconfigurations in 2015 facilitated data collection of net solar energy exported to our network. Avoided site visits to undertake a meter exchange to a bi-directional meter resulted in customer savings of over \$80 for each transaction;</li> </ul>
	<ul> <li>More than 5,0 special meter reads were undertaken remotely in 2015 resulting in customer savings of more than \$10 per transaction; and</li> </ul>
	The collection of data remotely allows customers to be billed on actual data and avoids estimated bills and associated customer enquiries and complaints.
	<ul> <li>Managing the network smarter and safer:         <ul> <li>Neutral integrity testing can be undertaken largely remotely avoiding site visits and manual testing at around 65,000 premises pa and saving \$26m pa (included on our EDPR submission)</li> </ul> </li> </ul>
	Enhanced monitoring of supply to life support customers can be undertaken during storm events using a on demand supply status check via a regular ping to the AMI meter;

Clause detail	United Energy response
	Faults can be identified remotely, to avoid wasted truck visits and restore supply more quickly;
	<ul> <li>Improved voltage data (use of severe over or under voltage data) provides us with a better understanding of equipment failure risks and assessment of damage claims (potential fatalities have bend averted);</li> </ul>
	Improved power quality data and Engineering Analytics to assess transformer peak load and the likely requirement for transformer upgrades facilitates more efficient use of existing capacity and more efficient investment;
	Calculation of dynamic cyclic ratings for distribution transformers enables us to achieve greater use of the spare capacity in the network;
	<ul> <li>Rebalancing of over loaded phases enables us to improve network utilisation on peak demand days, and reduce the need for network augmentation;</li> </ul>
	Use of end of day interval data to enhance load switching enables us to better manage expected high demand days in high network risk areas; and
	Improved identification of theft and stolen meters – estimated at \$1m pa together with criminal charges being laid.
	Targeted asset replacement based on condition rather than bulk replacements
	Reduced risks of a fire start and electrical shocks to customers
	<ul> <li>Customers have better access to energy consumption data and a broader range of pricing options:</li> <li>Over 7% of our residential customers have made use of interval data and have taken up flexible network tariffs;</li> </ul>

Clause detail	United Energy response
	<ul> <li>Access to new demand tariff was made available in 2015</li> <li>More than 18,000 customers are accessing detailed information on their electricity consumption via our web portal; and more recently third party energy agents are seeking access to customer data (with their consent) in order to provide customers with improved pricing options;</li> <li>More than 3,000 customers have taken up the use of In Home Displays to better understand their energy usage and appliance consumption;</li> <li>UE is also undertaking a number of trials – Summer Demand, Supply Capacity Limiting and Battery Storage to assist with peak demand reduction in constrained areas of the network.</li> </ul>
9. Safety and bushfire related expenditure	
9.1 For each safety and bushfire related expenditure, specify and define the relevant asset category to which it relates.	Appendix A – Annual Financial RIN Excel Template – Tab 22
<ul> <li>9.2 Identify each material (greater than or equal to 10%) difference, in relation to the asset categories specified in the response to paragraph 9.1, between:</li> <li>a) actual and forecast volumes;</li> <li>b) actual and forecast expenditure; and</li> <li>c) actual and forecast unit costs.</li> </ul>	Appendix A – Annual Financial RIN Excel Template – Tab 22
9.3 Provide reasons for each material (greater than or equal to 10%) difference identified in the response to paragraph 9.2.	Appendix A – Annual Financial RIN Excel Template – Tab 22

Clause	detail	United Energy response
	ovide reasons for any difference between the actual volumes submitted as part of the Electrical Safety nagement Scheme to Energy Safe Victoria and that in the Regulatory Accounting Statements.	Appendix A – Annual Financial RIN Excel Template – Tab 22
10. Spo	nsorship and marketing	
	ovide the following information for all advertising/marketing expenditure allocated to the distribution siness:	Not applicable – there were no expenditure amounts greater than five per cent of the advertising / marketing expenditure allocated to the distribution business.
a)	For expenditure greater than five per cent of the advertising / marketing expenditure allocated to the distribution business:	distribution business.
i.	Beneficiary	
ii.	Amount	
iii.	Purpose	
iv.	Proportion of the total advertising / marketing expenditure allocated to the <i>distribution business</i> related to:	
	1) safety or safety awareness	
	2) Managing consumer demand	
	3) Promoting distribution business brand	
	4) Other	
٧.	Description of the activities undertaken by the beneficiary, supported by the expenditure.	
b)	For all advertising / marketing expenditure allocated to the <i>distribution business</i> not reported under 10.1(a), provide:	The advertising and marketing expenditure reported represents the proportion of staff costs incurred to develop communications relating to
i.	list of beneficiaries	safety and safety awareness for project activities.
ii.	total amount	
iii.	proportion of the expenditure related to:	
	1) safety or safety awareness	
	2) Managing consumer demand	

Clause detail	United Energy response
Promoting <i>distribution business</i> brand     Other	
10.2 For each expenditure item identified in response to paragraph 10.1(a), identify the expenditure item in the statutory accounts from which it is derived.	Not applicable
11. Charts	
<ul><li>11.1 Provide a chart that sets out:</li><li>a) the group corporate structure of which <i>United Energy</i> is a part; and</li><li>b) the organisational structure of <i>United Energy</i>.</li></ul>	Appendix K – Charts
12. Audit Reports	
<ul> <li>12.1 Provide a Regulatory Audit Report in the form of:</li> <li>c) a Special Purpose Financial Report in accordance with the requirements set out at Appendix E; and</li> <li>d) an Audit Report (for non-financial information) in accordance with the requirements set out at Appendix E.</li> </ul>	Appendix J – Audit reports
12.2 Provide all reports from the Auditor to United Energy's management regarding the audit review and / or auditors' opinions or assessment.	Appendix J – Audit reports
13. Confidential information	
<ul> <li>13.1 If United Energy makes a claim for confidentiality over any information provided in accordance with this Notice, United Energy must:         <ul> <li>a) comply with the requirements of AER's Confidentiality Guideline, as if it extended and applied to responses in this Notice;</li> </ul> </li> </ul>	Appendix L – Confidentiality template

Clause detail	United Energy response
<ul> <li>b) provide, in addition to a confidential version of any information, a version of the information that may be published by the AER.</li> </ul>	
13.2 Confirm in writing that <i>United Energy</i> consents to the AER publically disclosing (including on the AER website) all information provided in accordance with this Notice, except the confidential version of information the subject of a confidentiality claim under paragraph 13.1.	Refer to Annual RIN submission transmittal email

#### 2.2 Compliance with Schedule 2 of the Notice

United Energy confirms that it prepares and maintains all information in accordance with Schedule 2 of the Notice.

#### 2.3 Compliance with the appendices of the Notice

The table below outlines how United Energy has complied with the requirements of Schedule 1 of the Notice.

Appendix	Details	United Energy response
Α	Principles and requirements	All information is in accordance with the principles and requirements outlined in Appendix A.
В	Regulatory accounting statement templates	Appendix A – Annual Financial RIN Excel Template
С	Non-financial information templates	Appendix B – Annual Non-Financial RIN Excel Template
D	Statutory declaration	Appendix I – Statutory declaration
E	Audits	Appendix J – Audit reports
F	Activity areas – Cost categories for operating expenditure	Appendix C – Basis of preparation – Operating expenditure
G	Asset and capital and maintenance expenditure categories	N/A
Н	Statement of reasons	N/A

## **Appendix A: Annual Financial RIN Excel Template**

Note: Refer attached spreadsheet

## **Appendix B: Annual Non-Financial RIN Excel Template**

Note: Refer attached spreadsheet

#### 1. Overview

United Energy is required to prepare a Basis of Preparation document (this document) which must, for all information:

- a) demonstrate how the information provided is consistent with the requirements of the Regulatory Information Notice (RIN);
- b) explain the source from which United Energy obtained the information provided;
- c) explain the methodology United Energy applied to provide the required information, including any assumptions United Energy made;
- d) explain, in circumstances where United Energy cannot provide information:
  - 1) why it was not possible for *United Energy* to provide the information required;
  - 2) what steps *United Energy* is taking to ensure it can provide the information in the future;
  - 3) if an estimate has been provided, the basis of the estimate, including the approach used, assumptions made and reasons why the estimate is *United Energy's* best estimate.

In accordance with the requirements above, this appendix provides details to support the information provided by United Energy in the Microsoft Excel workbooks titled *'United Energy 2015 - Annual RIN - Financial Information'* and *'United Energy 2015 - Annual RIN - Non-Financial Information'*.

To satisfy the requirements of the Notice, the following information has been provided for each RIN table:

- · assessment of data quality;
- data source;
- classification as actual or estimated information, including appropriate justification if estimated;
- methodology and assumptions adopted to prepare the information; and
- any additional comments to assist users of the information to understand the basis of preparation.

The table below outlines the classifications used to assess data quality.

Table 1: Data quality and classifications

Colour coding	Availability of data from NSP's Primary System	Assumptions / methodology					
Green	Available and verifiable	Simple – no additional work or minor work around (e.g. data sourced from a secondary system)					
Light green	Available with some gaps	Moderate – estimate based on statistically significant sample size					
Yellow	Little or no data available	Complex – estimate based on formula, standard parameters or other source					

Colour coding	Availability of data from NSP's Primary System	Assumptions / methodology
Pink	Little or no data available	Subjective – based on significant estimates, judgements and assumptions
Black	N/A	Not applicable to relevant NSP

The table below provides the AER definitions for actual and estimated information.

Table 2: Definitions - 'Actual and 'estimated'

Term	Table Heading
Actual information	Information presented in response to the Notice whose presentation is Materially dependent on information recorded in United Energy's historical accounting records or other records used in the normal course of business, and whose presentation for the purposes of the Notice is not contingent on judgments and assumptions for which there are valid alternatives, which could lead to a Materially different presentation in the response to the Notice.
	'Accounting records' include trial balances, the general ledger, subsidiary accounting ledgers, journal entries and documentation to support journal entries. Actual financial information may include accounting estimates, such as accruals and provisions, and any adjustments made to the accounting records to populate United Energy's regulatory accounts and responses to the Notice. 'Records used in the normal course of business', for the purposes of non-financial information, includes asset registers, geographical information systems, outage analysis systems, and so on.
Estimated information	Information presented in response to the Notice whose presentation is not Materially dependent on information recorded in United Energy's historical accounting records or other records used in the normal course of business, and whose presentation for the purposes of the Notice is contingent on judgments and assumptions for which there are valid alternatives, which could lead to a Materially different presentation in the response to the Notice.

The estimated information is produced using the methodology detailed below. This methodology represents United Energy's best estimate as applied over prior reporting periods and sourced from United Energy's information systems, audited information (where applicable), internal management reports and subject matter expert professional judgement based on the nature of United Energy's operations. United Energy is unable to provide information with greater accuracy than that provided in its response.

Where estimates have been provided, United Energy is currently considering the feasibility of improvement opportunities to allow actual information to be provided in the future.

The following tables outline the basis of preparation of the information provided in the Microsoft Excel Workbook titled 'United Energy 2015 - Annual RIN – Financial Information'.

**Table 3: Annual Financial RIN details** 

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
1a	Income	-	-		F	SAP	Actual / Estimate	As per relevant Annual Financial RIN tabs.	Consolidation of data from tabs contained within the Annual Financial RIN.	-	-
2	Demand and Revenue	1	Standard Control Services Revenue - Current Year		F	Based on reported monthly energy. SAP Billing System extracts via SAP HANA. Additional non DUOS tariff Revenue has been sourced from SAP Financial Accounts	Actual		Sum up annual revenue grouped by each tariff, with adjustments for Revenue from SAP Financial Accounts.		
					NF	SAP Billing System via SAP HANA	Actual		Based on reported monthly energy. Sum annual energy (GWh) components grouped by each tariff.		
		2	Standard Control Revenue - Prior Year		F / NF	Annual RIN 2014	Actual		As per Annual RIN reported revenue for 2014.		
		3	AMI - Current Year		F / NF	SAP Financial accounts	Actual		Sum transactions based on SAP account extract for the following; - Meter data services - Meter Provision Charges		

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
									Individual breakdown to the tariff categories has been provided by the business.		
					NF	SAP Billing System	Actual		Sum transactions based on SAP account extract for the following;		
									- Meter data services - Meter Provision Charges		
									Individual breakdown to the tariff categories has been provided by the Finance MRO from the SAP billing systems and is based on categories used in regulatory submissions.		
		4	AMI - Prior Year		F	Annual RIN 2014	Actual		As per Annual RIN reported AMI revenue for 2014.		
					NF	Annual RIN 2014	Actual		As per Annual RIN reported AMI meter count for 2014.		
		5	Public Lighting - Current Year		F	SAP Financial accounts and GIS Report	Actual		Sum transactions based on SAP account extract for public lighting O&M. Individual breakdown into tariff category has been provided in the GIS monthly report and is based on categories used in regulatory submissions.		
					NF	GIS Report			Sum transactions based on SAP account extract for public lighting O&M Individual breakdown into tariff category has been provided in the GIS monthly report as the number of MRUs per the tariff category and is based on categories used

									Total		656,822.09				
									* SAP Financial Accounts have been 1, 3, 5 where applicable. Only the tol Table 7 in the Financial RIN.						
3a	Capex (T) - Total			Standard Control Service		Standard Control Service		F	SAP	Actual		Extracted a list of statutory capital additions from SAP and categorised it based on the SAP expenditure type field. The voltage has predominately been determined from the asset class the expenditure resides against on the fixed asset register.	(underground	er connections I elective) adjusted ocated to Other ontrol	
		2	Material Difference Explanation		NF	N/A	N/A		Analysed the makeup of the forecast and actual capital and compared the two.						

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
		3	Capex by Asset Class		F	SAP	Actual		Data generated as follows:  • 'Subtransmission' totals as per Table 1  • 'HV' and 'LV' totals as per Table 1  • 'SCADA/Network Control' total as per Table 1  • 'Non network - IT' total as per Table 1  • 'Non network - other' total as per Table 1  • 'Non network - other' total as per Table 1  • As there is no number reported in 'Metering - Non AMI' total as per Table 1 this is zero  • 'AMI' total as per Table 4  • 'Public Lighting - Total Additions' total as per Table 4  • 'Other Alternative Control - Total Additions' total as per Table 4  • 'Negotiated Services' total on Table 4 of this schedule  • Unregulated' total as per Table 4	UE does not capitalise any interest charges or equity raising costs directly to capital expenditure so the total for this category is zero	
		4	Other Capex		F	SAP Service provider costs	Actual		Extracted a list of statutory capital additions from SAP and categorised based on the SAP expenditure type field. For fields relating to Other - fee based services, Other - quoted services and Unregulated SAP data pertaining to ACS costs and revenue billed, including external service providers' unit costs per invoices applied against ACS service orders was used.		
		5	Customer		F	SAP	Actual		Data download from the United		

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
			Contributions by Asset Class						Energy general ledger includes four general ledger accounts: 60400 (Customer Contributions – General), 60401 (Customer Contributions - P/L), 60402 (Customer contributions - In Kind) and 60403 (Customer Contributions – Quoted). The data was split by 'Material type' enabling the revenue to be allocated to the appropriate Customer Contribution by Asset Class.		
		6	Disposals by asset class		F	SAP Fixed Asset retirement report	Actual		Extracted a list of statutory retirements with proceeds and categorised it based on the SAP asset class field. SCADA disposals relate to funds received from a legal dispute which occurred in CY2015.	None	Proceeds from the sale of assets has been reported
3b	Capex (M) - Total Margins	1	Standard Control Service		F	SAP	Actual / Estimate		Reinforcement Extracted a list of related parties' statutory capital additions from SAP and determined the value of capital related to margin and categorised it based on the SAP expenditure type field. New customer connection As above Reliability and quality maintained Extracted a list of statutory capital additions from SAP and categorised based on the SAP expenditure type field.	Reinforcement The voltage split has been determined by using the actual total, allocated on the basis of the voltage split reported on schedule 3a. Capex (T).  New customer connection Assumed that none of the capital without a project number allocated to Other Alternative Control had a related party margin.  Reliability and quality maintained The voltage split has been determined by using the actual total, allocated on the basis of the voltage split reported on schedule	

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
										3a. Capex (T)	
		2	Material Difference Explanation		NF	N/A	N/A		Analysed the makeup of the forecast and actual capital and compared the two.		
		3	Capex by Asset Class		F	SAP	Actual		Data generated as follows:  'Subtransmission' totals on Table 1 of this schedule  'HV' and 'LV' totals on Table 1 of this schedule  'SCADA/Network Control' total on Table 1 of this schedule  As there is no figure reported in 'Non network - IT' total on Table 1 it is zero  'Non network - other' total on Table 1 of this schedule  As there is no figure reported in 'Metering - Non AMI' total on Table 1 this is zero  As there is no figure reported in 'AMI' total on Table 4 this is zero  'Public Lighting - Total Additions' total on Table 4 of this schedule  'Other Alternative Control - Total Additions' total on Table 4 of this schedule  As there is no figure reported in the 'Negotiated Services' total on Table 4 this is zero. As there is no figure reported in the 'Unregulated' total on Table 4 this is zero	UE does not capitalise any interest charges or equity raising costs directly to capital expenditure so the total for this category is zero	
		4	Other Capex		F	SAP Service provider costs	Actual		Extracted a list of related parties' statutory capital additions from SAP and determined the value of capital related to margin and		

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
									categorised it based on the SAP expenditure type field. For fields relating to Other - fee based services and Other - quoted services SAP data pertaining to ACS costs and revenue billed, including external service providers' unit costs per invoices applied against ACS service orders was used. There were no quoted services provided by related parties as such the number is zero. For data relating to Negotiated services and Unregulated extracted a list of statutory capital additions from SAP and categorised it based on the SAP expenditure type field. There were no capex costs relating to negotiated services and unregulated services and both fields in the table are zero.		
		5	Customer Contributions by Asset Class		F	SAP	Actual		All customer contributions are directly received by UE with no related party margin so all actual fields in this table are zero.		
		6	Disposals by asset class		F	SAP	Actual		All proceeds received on the sale of fixed assets are either directly received by UE or received with no related party margin so all actual fields in this table are zero.		Proceeds from the sale of assets have been reported.
5	Capex Tax	1	Tax Standard Lives and Capex Additions - Standard		F	SAP	Actual / Estimate	Multiple tax lives are used in this category, depending on the nature of the capital	Capex additions are actual. Data generated as follows: • Schedule 3a. Capex(T), Table 1, column 'Subtransmission' and SAP • Schedule 3a. Capex(T), Table 1,		

Tab	Table Name	Table	Table Title	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
			Control Services				expenditure.	columns 'HV' and 'LV' and SAP – Distribution system assets  • As there is Neutral screen services reported in Schedule 3a. Capex(T), Table 3 this is zero  • As there is no Distribution Transformer Upgrades reported in Schedule 3a. Capex (T), Table 3, this is zero. '  • Schedule 3a. Capex(T), Table 1, row 'SCADA/Network Control' & SAP  • Schedule 3a. Capex(T), Table 1, row 'Non network general - IT' & SAP  • Schedule 3a. Capex(T), Table 1, row 'Non network general - Other' & SAP  • As there is no Equity raising costs reported in Schedule 3a. Capex (T), Table 3, this is zero.  • As there is no metering reported in Schedule 3a. Capex(T), table 1, this is zero  • As there is no public lighting reported in Schedule 3a. Capex(T), table 1, this is zero The tax standard lives have been determined as a weighted average from an analysis of the actual tax rates used on capital allocated to this category and are subject to change.		
		2	Standard Control Services - Excl Metering	F	SAP	Actual / Estimate	Multiple tax lives are used in this category, depending on the nature of the capital expenditure.	Capex additions are actual. Data generated as follows:  • Schedule 3a. Capex(T), Table 1, rows 'Demand Related'  • Schedule 3a. Capex(T), Table 1, row 'Reliability & quality maintained'

			Table 1								
21	АМІ	1	Standard Control Asset Base - Metering		F	SAP	Actual		Data extracted from SAP as per AER definitions.		
		2a	Number of meters installed		F	CIS+ SAP	Actual and estimate	Adds & Alts service orders has no clear detail of meter type. So we require estimation of meter types. This is only a small portion of installed volumes.	Accumulation and MRIM meters Based on CIS+ data AMI meters Total 2015 installs counted as sum of below: • ZMRO, ZRNC Service orders in SAP • Net AMI transferred to SAP (this is a negative number as some of these meters counted in ZMRO service are part of Type 6 to 5 conversion) • ZRAA service orders where meter replacements were done. (CIS Adds & Alts service orders ignored as majority of orders done in SAP for 2015). Meter classification has been based on the same ratio as installed volumes obtained from the SAP-IQ09 report.	As ZRAA service orders do not completely describe the type of meter, the total AMI numbers (129,190) have had their meter types based on the Installed report.	
		2b	Cumulative number of meters		NF	CIS+ SAP	Actual		Accumulation and MRIM meters Based on CIS+ and SAP data. Migration occurred during from CIS+ and SAP. AMI meters Based on SAP installed meter report		
		3	AMI meter		NF	SAP	Actual /	The MRO program	Abolishment's	AMI meter for AMI meter	

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
			reconciliation				Estimate	is in completion stage. Issues have emerged in the transition from CIS to SAP which has meant that estimates are required	Calculated as difference between closing number of meters and sum of opening number of meters and installs less AMI meter for AMI meter replacements.  AMI meter for AMI replacements  Based on SAP reports	replacements' number is tracked in SAP for AMI installations. CIS+ replacements are estimated as zero as they are not tracked separately for meter replacements.	
		4	Number of meter read quantity – end of year		NF	CIS+ SAP	Actual		Accumulation and MRIM meters Based on CIS+ and SAP data. Migration occurred during from CIS+ and SAP. AMI meters Based on SAP installed meter report		
22	Safety and Bushfire	1	Asset groups: Definitions, Cost-Allocation Basis and Methodology		NF	Spreadsheet of the agreed program with ESV.	Actual		This table is completed based on the agreed programs with Energy Safe Victoria (ESV). Country Fire Authority (CFA) determined the demarcation of bushfire risk areas and the corresponding bushfire risk rating. Programs that pertained to UE's assets located in bushfire risk areas were categorised as bushfire related. All other programs were ESMS, ESL or non-ESL related. The allocation of cost to asset group was based on the definition in the Electricity Distribution Price Review (EDPR) which is requested by the Regulatory Team.		
		2	Bushfire Related		NF	ESV Annual Safety report EDPR 2011-	Actual		The safety and bushfire related programs, actual units and reasons for variance are provided		Categorisation of each program (completed in Table

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
			Expenditure (Volumes)			2015 submission			in the ESV Annual Safety Report. Forecast volumes changes may have occurred post submission to ESV. AER expected volumes were obtained from the 2011-2015 EDPR submission.		1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'Bushfire' shall have data entered in Table 2. All other lines shall be entered as zero or N/A.
		3	Safety Related Other - ESL, Non ESL and ESMS (Volumes)		NF	ESV Annual Safety report EDPR 2011- 2015 submission	Actual		The safety and bushfire related programs, actual units and reasons for variance are provided in the ESV Annual Safety Report. Forecast volume changes may have occurred post submission to ESV. AER expected volumes were obtained from the 2011-2015 EDPR submission.		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'ESL', 'ESMS' or 'Non-ESL' shall have data entered in Table 3. All other lines shall be entered as zero or N/A.
		4	Bushfire Related Expenditure (\$ Nominal - Excluding Margins and Overheads)		F	SAP EDPR 2011- 2015 Submission	Actual		AER expected expenditure for each program was obtained from UE General Manager of Asset Management, based on the AER's final determination for years 2011 – 2015.  Actual CY2015 expenditure has been recorded in SAP and has been extracted, filtered and sorted using MAT codes into categories required by the RIN.		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'Bushfire' shall have data entered in Table 2. All other

											lines shall be entered as zero or N/A.
		5	Safety Related Other - ESL, Non ESL and ESMS (\$ Nominal - Excluding Margins and Overheads)		F	SAP EDPR 2011- 2015 Submission	Actual		AER expected expenditure for each program was obtained from UE General Manager of Asset Management, based on the AER's final determination for years 2011 – 2015.  Actual CY2015 expenditure has been recorded in SAP and has been extracted, filtered and sorted using MAT codes into categories required by the RIN.  Due to RIN categories being a component of particular MAT code, the following allocations have been made to the following MAT code categories  - HV Xarms replacement - 12% Installation of 'P' Type Brackets and 88% Replacement of crossarms - based on age and condition  - Pole Replacement- Low Voltage  - 5% Identification and removal of public lighting switch wire and 95% Replacement of poles - based on age and condition  - LV Xarms replacement - 5% Identification and removal of public lighting switch wire and 95% Replacement of crossarms - based on age and condition		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'ESL', 'ESMS' or 'Non-ESL' shall have data entered in Table 3. All other lines shall be entered as zero or N/A.
		6	Bushfire Related Expenditure (\$		NF	SAP EDPR 2011- 2015	Actual		Expenditure on Bushfire Related programs has been recorded in SAP and has been extracted,		Categorisation of each program (completed in Table

Tab Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
		Nominal - Margins and Overheads)			Submission			filtered and sorted using MAT codes into categories required by the RIN. The SAP data records actual margins and overheads.  No expected expenditure was provided in 2010 as part of the 2011-2015 EDPR submission and hence, this column shall be entered as zero.		1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'Bushfire' shall have data entered in Table 2. All other lines shall be entered as zero or N/A.
	7	Safety Related Other - ESL, Non ESL and ESMS (\$ Nominal - Margins and Overheads)		NF	SAP EDPR 2011- 2015 Submission	Actual		Expenditure on Safety Related programs has been recorded in SAP and has been extracted, filtered and sorted using MAT codes into categories required by the RIN. The SAP data records actual margins and overheads.  No expected expenditure was provided in 2010 as part of the 2011-2015 EDPR submission and hence, this column shall be entered as zero.  Due to RIN categories being a component of particular MAT code, the following allocations have been made to the following MAT code categories  - HV Xarms replacement - 12% Installation of 'P' Type Brackets and 88% Replacement of crossarms - based on age and condition  - Pole Replacement- Low Voltage  - 5% Identification and removal of public lighting switch wire and 95% Replacement of poles -		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'ESL', 'ESMS' or 'Non-ESL' shall have data entered in Table 3. All other lines shall be entered as zero or N/A.

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
									based on age and condition - LV Xarms replacement - 5% Identification and removal of public lighting switch wire and 95% Replacement of crossarms - based on age and condition		
		8	Bushfire Related Expenditure (\$ unit cost)		F	SAP EDPR 2011- 2015 Submission	Actual		Expenditure on Bushfire Related programs has been recorded in SAP and has been extracted, filtered and sorted using MAT codes into categories required by the RIN. Actual unit costs are calculated as the total expenditure for each program in CY2015 and divided by the total volumes.  Expected unit costs are calculated as the net expenditure for each program in CY2015 and divided by the expected total volumes		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'Bushfire' shall have data entered in Table 2. All other lines shall be entered as zero or N/A.
		9	Safety Related Other - ESL, Non ESL and ESMS (\$ unit cost)		NF	SAP EDPR 2011- 2015 Submission	Actual		Expenditure on Bushfire Related programs has been recorded in SAP and has been extracted, filtered and sorted using MAT codes into categories required by the RIN. Actual unit costs are calculated as the total expenditure for each program in CY2015 and divided by the total volumes.  Expected unit costs are calculated as the net expenditure for each program in CY2015 and divided by the expected total volumes		Categorisation of each program (completed in Table 1) shall be used to determine whether data for each program will be entered into Table 2; only programs categorised as 'ESL', 'ESMS' or 'Non-ESL' shall have data entered in Table 3. All other lines shall be entered as zero or N/A.

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
		10	Safety Improvement Outcomes Reported to ESV (Volumes)		NF	ESV Annual Safety report EDPR 2011- 2015 Submission	Actual		The table was populated based on the ESV annual report t to ESV in January 2016. The Safety Improvement Programme Outcomes column was populated with AER expected volumes from 2010 (submitted as part of the 2011-2015 EDPR submission)		
		11	Reconciliation of Safety Improvement Outcomes reported to ESV and AER (Volumes)		NF				There should be no variance between the safety improvement outcomes reported to ESV and AER as AER defers to ESV safety requirements.  The ESV submission is lodged prior to the RIN, any differences reflect changes to data made after the ESV submission		
		12	Bushfire- Related Expenditure - Approved Under Pass- Through Applications (Volumes)						UE has proactively managed bushfire risks by including bushfire related programs in the core programs listed in Table 1.		
		13	Bushfire- Related Expenditure - Approved Under Pass- Through Applications (\$ Nominal - Excluding Margins and Overheads)						UE has proactively managed bushfire risks by including bushfire related programs in the core programs listed in Table 1.		1.

			Interruption Frequency Index)			was sourced from the Distribution Management System Database.			adjusted for temporary switching arrangements. MAIFI performance is calculated in accordance with AER definitions. These events are then filtered further for excluded events and MED. MED and excluded events are determined in accordance with AER definitions.		
		4	Distribution Customer Numbers		NF	The customer numbers are extracted from our GIS data base system.	Actual		Customer numbers are extracted from our GIS system for the start and the end of the reporting period.		
1b	STPIS Customer Performance	1	Telephone Answering		NF	Aegis Daily Report (raw) – Faults Desk	Actual		Number of calls received and number of calls answered within 30 seconds is extracted from the Aegis Daily Report (raw) – Faults Desk and used to populate the "Total" column. This report is then filtered to remove MED and populate the "Total – after removing excluded events" column.		
		2	New Connections		NF	Aegis Connections Monthly Report – Number of connections not provided on or before agreed date.	Actual		New Connections figure extracted from the Connections Monthly Report generated by the GIS Database. Number of connections not provided on or before agreed date – sum of number of GSL payments for connections based on SAP data.		
		3	Streetlight Repair		NF	SAP Financial accounts DMS public	Actual		Calculated as average of streetlights held over 12 months as per SAP as per AER		

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
						lighting report			definitions Figures relating to street light repairs and GSL payments extracted from the DMS Public Lighting Report as per AER definitions		
1c	STPIS Daily Performance	1	Daily Performance Data (Unplanned)		NF	From 31 December 2014 to 31 December 2015, the data was sourced from the Distribution Management System Database.	Actual		Raw data is downloaded from the Distribution Management Database. The data is "cleansed" to remove duplications and adjusted for temporary switching arrangements. MAIFI performance is calculated in accordance with AER definitions. These events are then filtered further for excluded events.		
		1	Daily Performance Data (Unplanned)- Customer Service		NF	Aegis Daily Report (raw) - Faults Desk only	Actual		Data is extracted from Aegis Daily Report, as per AER definition.		
1e	STPIS Exclusions	1	Exclusions		NF	From 31 December 2014 to 31 December 2015, the data was sourced from the Distribution Management System Database.	Actual		Raw data is downloaded from the Distribution Management Database. The data is "cleansed" to remove duplications and adjusted for temporary switching arrangements. These events are then filtered further to include only excluded unplanned events. The event category column is filled in manually in accordance with the definitions in the AER's STPIS document.  MED and excluded events are determined in accordance with		The "Duration of interruption (unplanned mins)" is not applicable as supply to customers is progressively restored.

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
									AER definitions.		
1f	STPIS - GSL	1	Guaranteed Service Levels - Jurisdictional GSL Scheme		F	Service Desk Appointments (provided by Skilltech), Connections Appointments are listed in the Connections Aegis reports.	Estimate	AEGIS Reported data found to be inaccurate; review of data is not possible in timeframe for RIN. Estimate utilised for RIN on Connections Data.	GSL payments for missed appointments were taken directly from SAP. As they were reported separately.  To determine the breakdown of GSL payments for the remaining types (connections, reliability of supply and faulty streetlights), the proportion of each payment type as per the Aegis reports and DMS operational reports were applied to the SAP GSL payments total less payments for missed appointments.  The totals for each GSL payment type were then further broken down into each subcategory (e.g. 1-4 day delay or 5+ day delay for connections) by using the same proportions as the relevant Aegis report / DMS operational report.  To determine the number of each type of payment, the dollar figures were divided by the average value of GSL payments for each subcategory determined from the relevant Aegis report / DMS operational report.	The proportions of GSL payment types in DMS and Aegis systems are the same as the proportions of GSL payment types in SAP, with the exception of GSL payments for missed appointments, which are reported separately.	
		2	Guaranteed Service Levels – AER GSL Scheme		NF	Appointments and connections Aegis Service Desk Appointments Aegis Connections	Actual		Appointments UE makes appointments for the following: Service Desk Appointments made with Skilltech to conduct: • Meter investigations • Meter Faults • Re-energisations		

Tab	Table Name	Table	Table Title	Fin / Non-fin		Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
					Monthly Report Streetlight data SAP (number of streetlights) DMS (streetlights out during period, number of business days to repair, not repaired by fix by date)			New Connections Appointments made with ZNX and Tenix:  • Adds/Alts  • Abolishments  • Solar connections  Connections As per AER definition – Data from Aegis report.  Streetlights  • Number of streetlights - Average number of streetlights as per SAP  • Streetlights out during period - as per DMS  • Not repaired by 'fixed by date' – Number of GSL payments plus DMS operational data for streetlights not repaired within 7 working days  • Streetlights not repaired within 2 business days – Number of GSL payments  • Number of business days to repair – as per DMS  Planned interruptions  As per DMS data for planned outages.		
2	Customer service	1	Quality of supply	NF	Web Reporter of ION Enterprise - UE Database	Actual		PQ analysers are installed at every zone substation and at the end of the longest feeder of every zone substation and collect voltage variation data. Web Reporter of ION Enterprise has been used to define, generate, and manage comprehensive reports, based on information extracted from the meters and contained in the UE Database.		

Tab	Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
									Note: The first six rows of the RIN - Quality Supply Table 1 cannot be completed due to a lack of measurement capability for such events.		
		2	Complaints - Technical Quality of Supply		NF	Claims Database (1/1/2015 - 14/12/2015), UE SAP CRM (15/12/2015- 31/12/2015)			The number of complaints classified by customer resolution agents as relating to quality of supply complaints (recorded by UE as 'Regulatory Category 1'). The complaints sub-categories (recorded by UE as 'Regulatory Category 2') and likely causes (recorded by UE as 'Regulatory Category 3') for quality of supply complaints recorded in the UE system are the same as those requested by the AER. Therefore, data has been directly extracted from the system in the relevant categories.		
		3	Customer Service		NF	Aegis Connections Monthly Report Aegis Daily Report (raw) - Faults Desk only Aegis Monthly Report (Faults tab) (Refer to Tab 1f details for streetlight data)	Actual		Timely provision of services A specific date is not agreed with customers; therefore, this number represents the number of connections not made within the agreed period.  Streetlight data As per Tab 1f – STPIS GLS data Call centre performance  • Calls to call centre fault line – total all months (Jan – Dec) for Total number of calls offered to the automated switchboard  • Calls to fault line answered within 30 seconds – the time to answer a call is measured from when the call enters the		

Tab Table Name	Table	Table Title	Data quality	Fin / Non-fin	Data source	Actual / Estimate	Justification (if estimated)	Methodology (Actual & Estimated)	Assumptions (Actual & Estimated)	Additional Comments
								telephone system of the call centre (including that time when it may be ringing unanswered by any response) and the caller speaks with a human operator, but excluding the time that the caller is connected to an automated interactive service that provides substantive information. This measure does not apply to:  (a) calls to payment lines and automated interactive services (b) calls abandoned by the customer within 30 seconds of the call being queued for response by a human operator (where the time in which a telephone call is abandoned is not measured, then an estimate of the number of calls abandoned within 30 seconds will be determined by taking 20 per cent of all calls abandoned).  Number excludes Major Event Days.  Calls to fault line (average waiting time before call answered) – average of all months (Jan - Dec) for average speed of answer, including Self-Serve  Calls abandoned (percentage) – YTD average for abandon calls over 30 seconds  Call centre (number of overload events) – total all months (Jan – Dec) for Number of Overload Events

									methodology detailed within these UE produced documents. For this particular RIN, document UE PR 2302 was referenced. UE have no 'long rural' or CBD feeder classification and information is therefore not provided. Calculations are completed in accordance with AER definitions. The average distribution customer numbers used in calculations is taken from RIN 1a Table 4.

# Appendix D: UED Annual Financial Report – Financial year ended 31 December 2015

Note: See attached

## United Energy Distribution Pty Ltd ABN 70 064 651 029

Annual Financial Report for the year ended 31 December 2015

#### Directors' report

Your directors present their report on the consolidated entity (referred to hereafter as the Group) consisting of United Energy Distribution Pty Ltd and the entities it controlled at the end of, or during, the year ended 31 December 2015.

#### Directors

Mr Peter Lowe

Chairman and Non-Executive Director

Mr David Bartholomew Non-Executive Director

Mr Jason Conroy Non-Executive Director

Mr Geoffrey Nicholson Non-Executive Director

Ms Joanne Pearson

Alternate Director (alternate to Mr Geoffrey Nicholson)

Mr Nicholas Kuys

Alternate Director (alternate to Mr David Bartholomew & Mr Jason Conroy)

#### **Principal activities**

During the period the principal continuing activities of the Group consisted of distributing electricity from Victoria's transmission network to the premises of residential, commercial and industrial electricity users which is enabled via the ongoing construction, augmentation and maintenance of its electricity network in Victoria, Australia.

#### **Dividends**

No dividends were declared or paid during the year ended 31 December 2015 (2014: nil).

#### Review of operations

The review of operations covers the year from 1 January 2015 to 31 December 2015.

The profit from ordinary activities after income tax amounted to \$85,217k (2014: \$904k).

Consolidated revenue for the period was \$679,230k (2014: \$624,232k). Of this figure, electricity distribution revenue amounted to \$535,391k (2014: \$499,181k). The network distributed 7,632 GWh (2014: 7,856 GWh) of electricity during the year.

As at 31 December 2015, the Group has a net current asset deficiency of \$259m. The main driver is the reclassification of US\$200m (A\$274.4m) in debt from a non-current to a current liability as the debt matures in April 2016. A new facility with maturities of 7 and 10 years was entered into in order to replace this facility. Despite the net current asset deficiency, the 12 months cash flow forecast shows that UED can continue to generate positive operating cash flows and/or has sufficient appropriate debt and equity capital in place to enable operations to continue as a going concern.

#### Matters subsequent to the end of the financial year

No matter or circumstance has arisen since 31 December 2015 that has significantly affected, or may significantly affect:

- (a) the Group's operations in future financial years, or
- (b) the results of those operations in future financial years, or
- (c) the Group's state of affairs in future financial years.

#### Likely developments and expected results of operations

The consolidated entity will continue its policy of providing safe and reliable electricity distribution services.

At the date of this report, there are no likely developments in the operations of the consolidated entity that, in the opinion of the directors, are likely to significantly impact the consolidated entity in the future.

United Energy Distribution Pty Ltd Directors' report 31 December 2015 (continued)

#### Environmental regulation

The consolidated entity's operations are subject to significant environmental regulation under the Environmental Protection Act 1970 (Vic). The consolidated entity embraces environmental management principles using compliance with ISO 14001 for proactive planning, sustainable development and self assessment for continuous improvement. The consolidated entity did not receive any notification from the Environmental Protection Agency (EPA) for violation of the Act for the current or previous period and up to the date of signing this report in 2016.

#### Auditor's independence declaration

A copy of the auditor's independence declaration as required under section 307C of the *Corporations Act 2001* is set out on page 3.

#### Rounding of amounts

The company is of a kind referred to in Class Order 98/100, issued by the Australian Securities and Investments Commission, relating to the 'rounding off' of amounts in the directors' report. Amounts in the directors' report have been rounded off in accordance with that Class Order to the nearest thousand dollars, or in certain cases, to the nearest dollar.

Mr Peter Lowe Director

#### 1 Summary of significant accounting policies

The principal accounting policies adopted in the preparation of these consolidated financial statements are set out below. These policies have been consistently applied to all the periods presented, unless otherwise stated in Note 1 (x). The financial statements are for the consolidated entity consisting of United Energy Distribution Pty Ltd and its subsidiaries.

#### (a) Financial reporting framework

The Company is not a reporting entity because in the opinion of the directors, it is unlikely that users of the financial report exist who are unable to command the preparation of reports tailored so as to satisfy specifically all of their information needs. Accordingly, this 'special purpose financial report' has been prepared to satisfy the directors' regulatory reporting requirements.

The financial report has been prepared in accordance with the basis of accounting and disclosure requirements specified by all Accounting Standards and Interpretations, except the disclosure requirements of the pronouncements listed below.

Accounting Standards include Australian equivalents to International Financial Reporting Standards ('AIFRS').

AASB 7: Financial Instruments: Disclosures

AASB 8: Segment Reporting

AASB 9 (2014): Financial Instruments (applied from 1 July 2015)

AASB 12: Disclosure of Interests in Other Entities

AASB 13: Fair Value Measurement

AASB 102: Inventories

AASB 112: Income Taxes

AASB 116: Property, Plant and Equipment

AASB 117: Leases

AASB 119: Employee Benefits

AASB 124: Related Party Disclosures

AASB 132: Financial Instruments: Presentation

AASB 136: Impairment of Assets

AASB 137: Provisions, Contingent Liabilities and Contingent Assets

AASB 138: Intangible Assets

AASB 139: Financial Instruments: Recognition and Measurement (applied to 30 June 2015)

#### (b) Basis of preparation

As at 31 December 2015, the Group has a net current asset deficiency of \$259m. The main driver is the reclassification of US\$200m (A\$274.4m) in debt from a non-current to a current liability as the debt matures in April 2016. A new facility with maturities of 7 and 10 years was entered into in order to replace this facility. Despite the net current asset deficiency, the 12 months cash flow forecast shows that UED can continue to generate positive operating cash flows and/or has sufficient appropriate debt and equity capital in place to enable operations to continue as a going concern.

#### (i) Historical cost convention

These financial statements have been prepared under the historical cost convention, as modified by the revaluation of available-for-sale financial assets, financial assets and liabilities (including derivative instruments) at fair value through profit or loss, certain classes of property, plant and equipment and investment property.

#### (ii) Critical accounting estimates

The preparation of financial statements requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying the Group's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the financial statements, are disclosed in note 3.

#### 1 Summary of significant accounting policies (continued)

#### (b) Basis of preparation (continued)

#### (ii) Critical accounting estimates (continued)

The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstance, the results of which form the basis of making the judgments. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised, if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

Judgments made by management in the application of the Group's accounting policies that have significant effects on the financial statements and estimates with a significant risk of material adjustments in the next year are disclosed, where applicable, in the relevant notes to the financial statements.

Accounting policies are selected and applied in a manner which ensures that the resulting financial information satisfies the concepts of relevance and reliability, thereby ensuring that the substance of the underlying transactions or other events are reported.

#### (c) Principles of consolidation

#### (i) Subsidiaries

The consolidated financial statements incorporate the assets and liabilities of all subsidiaries of United Energy Distribution Pty Ltd ('company' or 'parent entity') as at 31 December 2015 and the results of all subsidiaries for the period then ended. United Energy Distribution Pty Ltd and its subsidiaries together are referred to in this financial report as the Group or the consolidated entity.

Controlled entities are all entities (including special purpose entities) over which the Group has the power to govern the financial and operating policies, generally accompanying a shareholding of more than one-half of the voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the Group controls another entity.

Subsidiaries are fully consolidated from the date on which control is transferred to the Group. They are de-consolidated from the date that control ceases.

Intercompany transactions, balances and unrealised gains on transactions between Group companies are eliminated. Unrealised losses are also eliminated unless the transaction provides evidence of the impairment of the asset transferred. Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the Group.

The effect of all transactions between entities in the consolidated entity are eliminated in full.

#### (d) Foreign currency translation

#### (i) Functional and presentation currency

Items included in the financial statements of each of the Group's entities are measured using the currency of the primary economic environment in which the entity operates ('the functional currency'). The consolidated financial statements are presented in Australian dollars, which is United Energy Distribution Pty Ltd's functional and presentation currency.

#### (ii) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in profit or loss, except when they are deferred in equity as qualifying cash flow hedges and qualifying net investment hedges or are attributable to part of the net investment in a foreign operation.

#### 1 Summary of significant accounting policies (continued)

#### (d) Foreign currency translation (continued)

#### (iii) Specific commitments: hedging

Hedging is undertaken in order to avoid or minimise possible adverse financial effects of movements in exchange rates.

Borrowings that are denominated in foreign currencies that are fully hedged have been converted to Australian currency, using rates of exchange ruling at the end of the financial year, and the related hedge asset or liability is calculated using the hedge rates.

#### (e) Revenue recognition

Revenue is measured at the fair value of the consideration received or receivable. Amounts disclosed as revenue are net of returns, trade allowances, rebates and amounts collected on behalf of third parties.

Revenue is recognised for the major business activities as follows:

#### (i) Electricity distribution revenue

Distribution of electricity revenue earned from the use of the distribution network is recognised when electricity and related services are provided. Accrued distribution of electricity revenue is determined having regard to the period since a customer's last billing date and the customer's previous consumption patterns. Distribution of electricity revenue includes the cost of transmission services charged by the transmission companies, which is passed on to the customers.

#### (ii) Customer contributions

Non-refundable contributions and in kind assets received from customers towards the cost of extending or modifying the electricity distribution network, whether on existing or new assets, are recognised as revenue and an asset once control is gained of the contribution or asset.

#### (iii) Meter revenue

Meter revenue is recovered under a Cost Recovery Order in Council. The revenue is recorded as it is earned from energy consumed.

#### (iv) Interest revenue

Interest revenue is recognised to the extent that it is probable that the economic benefits will flow to the Group and the revenue can be reliably measured. Interest income is brought to account on an accruals basis using the effective interest method.

#### (v) Other revenue

Other revenue is brought to account as it is earned and is recognised when the goods and services are provided.

#### (f) Finance costs

Finance costs include interest and ancillary costs incurred in connection with arrangements of borrowings.

Finance costs are expensed during the period in which they are incurred. Borrowing costs incurred for the construction of any qualifying asset are not capitalised during the period of time that is required to complete and prepare the asset for its intended use or sale.

Long term borrowings are initially recognised at fair value, net of finance costs incurred. The differences between the proceeds (net of finance costs) and the redemption value is recognised in the income statement over the period of the borrowings using the effective interest rate.

#### 1 Summary of significant accounting policies (continued)

#### (g) Income tax

Income tax on the profit or loss for the year comprises current and deferred tax. Income tax is recognised in the income statement except to the extent that it relates to items recognised directly in equity, in which case it is recognised in equity.

Current income tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at the balance date, and any adjustment to tax payable in respect of previous years. Deferred tax is provided using the balance sheet liability method, providing for temporary differences between carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The following temporary differences are not provided for: goodwill not deductible for tax purposes; the initial recognition of assets and liabilities that affect neither accounting nor taxable profit, and differences relating to investments in subsidiaries to the extent that they will probably not reverse in the foreseeable future. The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of assets and liabilities using tax rates enacted or substantially enacted at the balance date.

A deferred tax asset is recognised only to the extent that it is probable that future tax profits will be available against which the asset can be utilised. Deferred tax assets are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

#### (i) Tax consolidation

United Energy Distribution Holdings Pty Ltd is the head company in a tax consolidated group comprising it and its Australian wholly-owned subsidiaries of which United Energy Distribution Pty Ltd is a member. The implementation date for this tax consolidated group was 23 July 2003.

Current tax expense/benefit, deferred tax liabilities and deferred tax assets arising from temporary differences of the members of the tax consolidated group are recognised in the separate financial statements of the members of the tax consolidated group using the "group allocation" approach by reference to the carrying amounts at the tax consolidated group level and their tax values as applicable under the tax consolidation legislation.

Any current tax liabilities (or assets) and deferred tax assets arising from unused tax losses of the subsidiary is assumed by the head entity in the tax consolidated group and are recognised as amounts payable/(receivable) to/(from) other entities in the tax consolidated group in conjunction with any tax funding agreement amounts (refer below).

The tax consolidated group has entered into a tax funding agreement that requires the wholly owned subsidiary to make contributions to the head entity for current tax assets and liabilities arising from external transactions occurring after the implementation of tax consolidation. The contribution is recorded as an intercompany receivable/payable.

Under the tax funding agreement, the contributions are calculated on a "group allocation basis" so that the contributions are equivalent to the tax balances generated by external transactions entered into by the wholly owned subsidiary. The contributions are payable as set out in the agreement and reflect the timing of the head entity's obligations to make payments for tax liabilities to the relevant tax authorities. The assets and liabilities arising under tax funding agreements are recognised as intercompany assets and liabilities with a consequential adjustment to income tax expense/revenue.

#### 1 Summary of significant accounting policies (continued)

#### (h) Impairment of assets

#### (i) Financial assets

A financial asset is considered to be impaired if objective evidence indicates that one or more events have had a negative effect on the estimated future cash flows of that asset.

An impairment loss in respect of a financial asset measured at amortised cost is calculated as the difference between its carrying amount, and the present value of the estimated future cash flows discounted at the original effective interest rate.

An impairment loss in respect of an available-for-sale financial asset is calculated by reference to its current fair

Individually significant financial assets are tested for impairment on an individual basis. The remaining financial assets are assessed collectively in groups that share similar credit risk characteristics.

All impairment losses are recognised in profit or loss. Any cumulative loss in respect of an available-for-sale financial asset recognised previously in equity is transferred to profit or loss.

An impairment loss is reversed if the reversal can be related objectively to an event occurring after the impairment loss was recognised. For financial assets measured at amortised cost and available-for-sale financial assets that are debt securities, the reversal is recognised in profit or loss. For available-for-sale financial assets that are equity securities, the reversal is recognised directly in equity.

#### (ii) Non-financial assets

The carrying amounts of the consolidated entity's non-financial assets, other than inventories and deferred tax assets, are reviewed annually to determine whether there is any indication of impairment. If any such indication exists, the asset's recoverable amount is estimated.

For assets that have an indefinite useful life, the recoverable amount is estimated annually. An impairment loss is recognised whenever the carrying amount of an asset or its cash generating unit exceeds its recoverable amount. Impairment losses are recognised in the income statement. Impairment losses recognised in respect of cash generating units are allocated to reduce the carrying amount of assets in the cash generating unit (group of units) on a pro rata basis.

The recoverable amount of an asset or cash generating unit is the greater of their fair value less costs to sell and value in use. In assessing value in use, the assets of the consolidated entity are assessed as one class of assets in their entirety.

The estimated future cash flows are discounted to their present value using a pre tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. For an asset that does not generate largely independent cash inflows the recoverable amount is determined for the cash generating unit to which the asset belongs.

An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation, if no impairment loss has been recognised.

#### (i) Cash and cash equivalents

For the purpose of presentation in the consolidated statement of cash flows, cash and cash equivalents includes cash on hand, deposits held at call with financial institutions, other short-term, highly liquid investments with original maturities of three months or less that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value, and bank overdrafts. Bank overdrafts are shown within borrowings in current liabilities in the consolidated balance sheet.

#### 1 Summary of significant accounting policies (continued)

#### (j) Trade receivables

Trade receivables are recognised initially at fair value and subsequently measured at amortised cost using the effective interest method, less provision for impairment. Trade receivables are generally due for settlement within 30 days. They are presented as current assets unless collection is not expected for more than 12 months after the reporting date.

Collectability of trade debtors is reviewed on an ongoing basis. Debts which are known to be uncollectable are written off. A provision is raised for any doubtful accounts. A provision for impairment of trade receivables is established when there is objective evidence that the Group will not be able to collect all amounts due according to the original terms of the receivables. The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the original effective interest rate. Cash flows relating to short-term receivables are not discounted if the effect of discounting is immaterial. The amount of the provision is recognised in the income statement in other expenses.

#### (k) Inventories

Transformers and meters are stated at the lower of cost and net realisable value. Cost is measured at actual cost and provision is made for obsolescence where applicable.

#### (I) Derivatives and hedging activities

Derivatives are initially recognised at fair value on the date a derivative contract is entered into and are subsequently remeasured to their fair value at the end of each reporting period. The accounting for subsequent changes in fair value depends on whether the derivative is designated as a hedging instrument, and if so, the nature of the item being hedged. The Group designates certain derivatives as either:

- hedges of the fair value of recognised assets or liabilities or a firm commitment (fair value hedges)
- hedges of a particular risk associated with the cash flows of recognised assets and liabilities and highly probable forecast transactions (cash flow hedges), or
- hedges of a net investment in a foreign operation (net investment hedges).

The Group documents at the inception of the hedging transaction the relationship between hedging instruments and hedged items, as well as its risk management objective and strategy for undertaking various hedge transactions. The Group also documents its assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions have been and will continue to be highly effective in offsetting changes in fair values or cash flows of hedged items.

The fair values of various derivative financial instruments used for hedging purposes are disclosed in note 10. Movements in the hedging reserve in shareholder's equity are shown in note 22. The full fair value of a hedging derivative is classified as a non-current asset or liability when the remaining maturity of the hedged item is more than 12 months; it is classified as a current asset or liability when the remaining maturity of the hedged item is less than 12 months. Trading derivatives are classified as a current asset or liability.

#### (i) Fair value hedge

Changes in the fair value of derivatives that are designated and qualify as fair value hedges are recorded in profit or loss, together with any changes in the fair value of the hedged asset or liability that are attributable to the hedged risk. The gain or loss relating to the effective portion of interest rate swaps hedging fixed rate borrowings is recognised in profit or loss within finance costs, together with changes in the fair value of the hedged fixed rate borrowings attributable to interest rate risk. The gain or loss relating to the ineffective portion is recognised in profit or loss within other income or other expenses.

If the hedge no longer meets the criteria for hedge accounting, the adjustment to the carrying amount of a hedged item for which the effective interest method is used is amortised to profit or loss over the period to maturity using a recalculated effective interest rate.

#### 1 Summary of significant accounting policies (continued)

#### (I) Derivatives and hedging activities (continued)

#### (ii) Cash flow hedge

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges is recognised in other comprehensive income and accumulated in reserves in equity. The gain or loss relating to the ineffective portion is recognised immediately in profit or loss within other income or other expenses.

Amounts accumulated in equity are reclassified to profit or loss in the periods when the hedged item affects profit or loss (for instance when the forecast sale that is hedged takes place). The gain or loss relating to the effective portion of interest rate swaps hedging variable rate borrowings is recognised in profit or loss within 'finance costs'. The gain or loss relating to the effective portion of forward foreign exchange contracts hedging export sales is recognised in profit or loss within 'sales'. However, when the forecast transaction that is hedged results in the recognition of a non-financial asset (for example, inventory or fixed assets) the gains and losses previously deferred in equity are reclassified from equity and included in the initial measurement of the cost of the asset. The deferred amounts are ultimately recognised in profit or loss as cost of goods sold in the case of inventory, or as depreciation or impairment in the case of fixed assets.

When a hedging instrument expires or is sold or terminated, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in equity and is recognised when the forecast transaction is ultimately recognised in profit or loss. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is immediately reclassified to profit or loss.

#### (m) Property, plant and equipment

Land and buildings are shown at fair value, less subsequent depreciation for buildings. Any accumulated depreciation at the date of revaluation is eliminated against the gross carrying amount of the asset and the net amount is restated to the revalued amount of the asset. All other property, plant and equipment is stated at historical cost less depreciation. Historical cost includes expenditure that is directly attributable to the acquisition of the items. Cost may also include transfers from equity of any gains or losses on qualifying cash flow hedges of foreign currency purchases of property, plant and equipment.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. The carrying amount of any component accounted for as a separate asset is derecognised when replaced. All other repairs and maintenance are charged to profit or loss during the reporting period in which they are incurred.

Land is not depreciated. Depreciation on other assets is calculated using the straight-line method to allocate their cost or revalued amounts, net of their residual values, over their estimated useful lives or, in the case of leasehold improvements and certain leased plant and equipment, the shorter lease term as follows:

- Buildings	10 - 40 years
- Plant and equipment	15 - 50 years
- Vehicles	5 - 10 years
- Office equipment	3 - 15 years
- Furniture, fixtures and fittings	1 - 12 vears

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at the end of each reporting period.

An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount (note 1(h)).

Gains and losses on disposals are determined by comparing proceeds with carrying amount. These are included in profit or loss. When revalued assets are sold, it is Group policy to transfer any amounts included in other reserves in respect of those assets to retained earnings.

#### 1 Summary of significant accounting policies (continued)

#### (n) Intangible assets

#### (i) Distribution licences

The consolidated entity has a licence that entitles it to distribute electricity within its region. The licence has been brought to account having regard to the expected future net cash flows derived from holding the licence. No amortisation is provided, since in the opinion of the directors, the life of the licence is of such duration, and the residual value would be such that the amortisation charge, if any, would not be material. To support the ongoing carrying value of this asset, nothing has occurred to suggest the terms and conditions of the issuance of the licence have not been complied with. The value of this licence is reviewed annually.

#### (ii) Software licences

When the software is not an integral part of the related hardware, it is treated as an intangible asset. All software licences are recorded at cost and amortised on a straight line basis over their useful lives, which range from 4 to 5 years.

#### (o) Trade and other payables

These amounts represent liabilities for goods and services provided to the Group prior to the end of financial year which are unpaid. The amounts are unsecured and are usually paid within 30 days of recognition. Trade and other payables are presented as current liabilities unless payment is not due within 12 months from the reporting date. They are recognised initially at their fair value and subsequently measured at amortised cost using the effective interest method.

#### (p) Customer deposits

Customer deposits are recognised as liabilities and represent either refundable deposits that are received in advance as finance on capital projects or advances from customers held as security over future electricity usage.

#### (q) Interest bearing liabilities

Borrowings are initially recognised at fair value, net of transaction costs incurred. Borrowings are subsequently measured at amortised cost. Any difference between the proceeds (net of transaction costs) and the redemption amount is recognised in profit or loss over the period of the borrowings using the effective interest method. Fees paid on the establishment of loan facilities are recognised as transaction costs of the loan to the extent that it is probable that some or all of the facility will be drawn down. In this case, the fee is deferred until the draw down occurs. To the extent there is no evidence that it is probable that some or all of the facility will be drawn down, the fee is capitalised as a prepayment for liquidity services and amortised over the period of the facility to which it relates.

Preference shares, which are mandatorily redeemable on a specific date, are classified as liabilities. The dividends on these preference shares are recognised in profit or loss as finance costs.

Borrowings are removed from the balance sheet when the obligation specified in the contract is discharged, cancelled or expired. The difference between the carrying amount of a financial liability that has been extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in profit or loss as other income or finance costs.

Where the terms of a financial liability are renegotiated and the entity issues equity instruments to a creditor to extinguish all or part of the liability (debt for equity swap), a gain or loss is recognised in profit or loss, which is measured as the difference between the carrying amount of the financial liability and the fair value of the equity instruments issued.

Borrowings are classified as current liabilities unless the Group has an unconditional right to defer settlement of the liability for at least 12 months after the reporting period.

#### 1 Summary of significant accounting policies (continued)

#### (r) Provisions

Provisions for legal and other claims are recognised when the Group has a present obligation (legal or constructive) as a result of past event, it is probable that the Group will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation. Provisions are not recognised for future operating losses.

The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation at the reporting date, taking into account the risks and uncertainties surrounding the obligation. Where a provision is measured using the cashflows estimated to settle the present obligation, its carrying amount is the present value of those cashflows.

#### (i) Environmental provision

Provision has been made in the financial statements for environmental management costs to ensure compliance with environmental management principles using ISO 14001 and The Environment Protection Act 1970 of Victoria.

#### (s) Employee benefits

#### (i) Wages and salaries, annual leave and sick leave

Liabilities for wages and salaries, including non-monetary benefits, annual leave and accumulating sick leave expected to be settled within 12 months of the reporting date are measured at the amounts expected to be paid when the liabilities are settled. Liabilities for non-accumulating sick leave are recognised when the leave is taken and measured at the rates paid or payable.

#### (ii) Long service leave

The liability for long service leave expected to be settled in twelve months of the balance date is recognised in the provision for employee benefits and is measured in accordance with (i) above. The liability for long service leave is recognised in the provision for employee benefits and measured as the present value of expected future payments to be made in respect of services provided by employees up to the reporting date. Consideration is given to expected future wage and salary levels, experience of employee departures and periods of service. Expected future payments are discounted using market yields at the reporting date on national government bonds with terms to maturity and currency that match, as closely as possible, the estimated future cash outflows.

The annual leave, long service leave and any outstanding wages and salaries entitlements are grouped together as employee benefits in the accounts. These benefits are also analysed between current and non-current depending on when they are due and payable.

#### (t) Contributed equity

Contributed equity is recorded at consideration received. The costs of issuing securities are charged against contributed equity. The terms and conditions of various classes of equities affecting income or capital entitlements are detailed in note 21.

#### (u) Goods and Services Tax (GST)

Revenues, expenses and assets are recognised net of the amount of associated GST, unless the GST incurred is not recoverable from the taxation authority. In this case it is recognised as part of the cost of acquisition of the asset or as part of the expense.

Receivables and payables are stated inclusive of the amount of GST receivable or payable. The net amount of GST recoverable from, or payable to, the taxation authority is included with other receivables or payables in the consolidated balance sheet.

#### 1 Summary of significant accounting policies (continued)

#### (u) Goods and Services Tax (GST) (continued)

Cash flows are presented on a gross basis. The GST components of cash flows arising from investing or financing activities which are recoverable from, or payable to the taxation authority, are presented as operating cash flows.

#### (v) Rounding of amounts

The company is of a kind referred to in Class Order 98/100, issued by the Australian Securities and Investments Commission, relating to the 'rounding off' of amounts in the financial statements. Amounts in the financial statements have been rounded off in accordance with that Class Order to the nearest thousand dollars, or in certain cases, the nearest dollar.

#### (w) Comparative figures

When required by Accounting standards, comparative figures have been adjusted to conform to changes in presentation for the current financial period.

#### (x) New accounting standards and interpretations

The Group applied several mandatory amendments for the first time in fiscal 2015. However they do not impact the annual consolidated financial statements of the Group. The nature of each new amendment is outlined below.

AASB 2012-3 Offsetting Financial Assets and Financial Liabilities adds application guidance to AASB 132 Financial Instruments: Presentation to address inconsistencies identified in applying some of the offsetting criteria of AASB 132, including clarifying the meaning of "currently has a legally enforceable right of set-off" and that some gross settlement systems may be considered equivalent to net settlement. The Group does not offset Financial Assets and Financial Liabilities.

AASB 2013-3 Amendments to AASB 136 - Recoverable Amount Disclosures for Non-Financial Assets amends the disclosure requirements in AASB 136 Impairment of Assets. The amendments include the requirement to disclose additional information about the fair value measurement when the recoverable amount of impaired assets is based on fair value less costs of disposal.

In addition to the mandatory amendments, AASB 9 Financial Instruments is required to be mandatorily applied from 1 January 2017, however the Group has assessed the impact of early adoption and has adopted it from 1 July 2015.

Changes to classification and measurement of financial assets and financial liabilities

AASB 9 introduced new classification and measurement models for financial instruments. Held to Maturity (HTM)
and Available for Sale (AFS) asset categories have been removed. For financial instruments, there are only two
models, amortised cost and fair value. On adoption of AASB 9 financial assets have been classified as
subsequently measured at either amortised cost or fair value, depending on the assets' contractual cash flow
characteristics. There were no changes in classification or measurement of financial liabilities. There was no
impact on the statement of comprehensive income or the statement of changes in equity on adoption of AASB 9
in relation to classification and measurement of financial assets and financial liabilities.

#### Changes to hedge accounting

AASB 9 introduced new hedge accounting requirements. AASB 9 aligns hedge accounting more closely with common risk management practices. Hedge ineffectiveness will continue to be recognised in profit or loss. The company is still required to prepare contemporaneous documentation; however, the information to be documented under AASB 9 differs.

#### 1 Summary of significant accounting policies (continued)

#### (x) New accounting standards and interpretations (continued)

The following summarises the key changes:

risk components that are separately identifiable and reliably measurable will be eligible as hedged items, including non-financial items;

effectiveness measurement testing is required only on a prospective basis and new hedge effectiveness criteria includes the existence of an economic relationship between the hedged item and the hedging instrument; certain requirements must be met for discontinuing a hedge relationship; and hedging of groups of net positions is permitted subject to certain criteria.

The accounting and presentation requirements for hedge accounting remain largely unchanged; however, additional disclosures are required under the new standard.

AASB 9 has expanded the range of eligible hedged items, to include aggregated exposures (a combination of exposures), where derivatives may be a hedging instrument as well as part of a hedged item. This has resulted in the de-designation of certain existing hedge relationships and re-designation from 1 July 2015 without any change to the underlying economic objective of the hedging. This did not result in any market transactions.

Under AASB 9, certain costs of hedging, including foreign currency basis spreads, are excluded from the designation of a financial instrument as a hedging instrument, and accounted for as a cost of hedging. The cumulative change in fair value of the foreign currency basis spreads is recognised in the hedge reserve temporarily, and subsequently recognised in the income statement over the life of the hedge relationship.

New accounting standards issued but not yet effective

AASB15 Revenue From Contracts with Customers includes requirements to recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for these goods or services. The Group is currently assessing the impact of adopting this standard. The application date of this standard for the Group is 1 July 2018.

#### 2 Financial risk management

#### (a) Market risk

(i) Foreign exchange risk

Foreign exchange risk arises when future commercial transactions and recognised assets and liabilities are denominated in a currency that is not the entity's functional currency.

The Group operates within Australia and is only exposed to foreign exchange risk arising from currency exposures to the US dollar on borrowings and equipment purchases.

Cross currency swaps are used to manage foreign exchange risk associated with the US dollar borrowings.

The Group's risk management policy is to hedge 100% of all foreign exchange transactions for the life of the transaction.

#### 2 Financial risk management (continued)

#### (b) Interest rate risk

As the Group has no significant interest-bearing assets, the Group's income and operating cash flows are not materially exposed to changes in market interest rates although revenues are linked to CPI. The Group does not hedge revenues but structures a portion of its interest rate hedging to take this into account.

The Group's interest-rate risk arises from long-term borrowings. Borrowings issued at variable rates expose the Group to cash flow interest-rate risk. Group policy is to fix the rates for between 80% and 100% of its borrowings within the regulatory period.

The Group manages its cash flow interest-rate risk by using floating-to-fixed interest rate swaps. Borrowings issued at fixed rates expose the Group to fair value interest-rate risk. Such interest rate swaps have the economic effect of converting borrowings from floating rates to fixed rates. Generally, the Group raises long-term borrowings at floating rates and swaps them into fixed rates that are lower than those available if the Group borrowed them at fixed rates directly.

Under the interest-rate swaps, the Group agrees with other parties to exchange, at specified intervals (mainly quarterly), the difference between fixed contract rates and floating-rate interest amounts calculated by reference to the agreed notional principal amounts.

#### (c) Credit risk

The Group has no significant concentrations of credit risk. The Group has policies in place to ensure that sales of products and services are made to customers with an appropriate credit history. Derivative counterparties and cash transactions are limited to high credit quality financial institutions. The Group has policies that limit the amount of credit exposure to any one financial institution.

#### (d) Liquidity risk

Prudent liquidity risk management implies maintaining sufficient cash, the availability of funding through an adequate amount of committed credit facilities and the ability to close-out market positions. Due to the dynamic nature of the underlying businesses, the Group aims at maintaining flexibility in funding by keeping committed credit lines available.

#### 3 Critical accounting estimates and judgements

Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that may have a financial impact on the entity and that are believed to be reasonable under the circumstances.

#### (a) Critical accounting estimates and assumptions

The Group makes estimates and assumptions concerning the future. The resulting accounting estimates will, by definition, seldom equal the related actual results. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below.

#### 3 Critical accounting estimates and judgements (continued)

#### (a) Critical accounting estimates and assumptions (continued)

#### (i) Impairment of assets

Goodwill and intangible assets that have an indefinite useful life are not subject to amortisation and are tested annually for impairment, or more frequently if events or changes in circumstances indicate that they might be impaired. Other assets are tested for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value-in-use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash inflows which are largely independent of the cash inflows from other assets or groups of assets (cash-generating units). Non-financial assets other than goodwill that suffered an impairment are reviewed for possible reversal of the impairment at the end of each reporting period.

#### (ii) Provisions

The Group calculates the carrying amount of provisions under AASB 137 based on a variety of available information, much of which is based on estimates of the likely outflow of economic benefits.

#### (iii) Meter revenue

Meter revenue is recovered under a Cost Recovery Order in Council. The revenue is recorded as it is earned from energy consumed.

#### (iv) Income taxes

The Group applies the criteria stated in AASB 112 with regards to the calculation and recognition of deferred tax assets and liabilities. The application of the AASB 112 criteria involves the exercise of judgment surrounding the calculation of accounting and tax bases for the Group's assets and liabilities. Furthermore, the potential reversal of temporary differences also requires the use of estimates of future profitability, availability of taxable profits/losses on both revenue and capital account and potential future changes in accounting and tax bases.

In particular, the expectation of the availability of future taxable profits against which deferred tax assets arising in respect of revenue losses is subject to estimation and judgment.

#### (b) Critical judgements in applying the entity's accounting policies

At balance date the Group had not made any significant judgements in applying accounting policies that it considers critical to the Group's results.

(Decrease) increase in deferred tax liabilities (note 19)	34,789 30,488	21,803 14,836

#### (b) Tax consolidation legislation

Effective 23 July 2003, for the purposes of income taxation, United Energy Distribution Holdings Pty Ltd and its 100% Australian owned subsidiaries, of which United Energy Distribution Pty Ltd is a member, formed a tax consolidated group. Members of the tax consolidated group entered into a tax sharing and tax funding arrangement in order to allocate income tax expense to the wholly-owned subsidiaries on a pro-rata basis. These arrangements have been updated to reflect UIG Interpretations 1052. In addition, the agreement provides for the allocation of income tax liabilities between the entities should the head entity default on its tax payment obligations. At the balance date, the possibility of default is remote. The head entity of the tax consolidated group is United Energy Distribution Holdings Pty Ltd.

#### 7 Current assets - Cash and cash equivalents

	Consolida 31 December 2015 \$'000	
Cash at bank and in hand Other cash and cash equivalents	28,295 219	22,162 46

#### (a) Employee related provisions

A provision has been created to reflect contributions required to be paid to UE & Multinet Pty Ltd if United Energy withdraws from the current cost sharing agreement.

#### (b) Environmental provision

Provision has been made in the financial statements for environmental management costs to ensure compliance with environmental management principles using ISO 14001 and *The Environment Protection Act 1970 (Vic)*.

A comprehensive review of the contaminated land risk management project was performed in the year and has resulted in the reduction of the provisions that have been allocated to respond to inherent environmental liabilities on the network.

The hedge reserve is used to record gains or losses on a hedging instrument in a cash flow hedge that are recognised directly in equity.

#### (b) Retained earnings

Movements in retained earnings were as follows:

	Consolida 31 December 2015 \$'000	•
Balance 1 January	598,773	597,869
Net profit for the period	85,217	904
Balance 31 December	683,990	598,773

#### 23 Remuneration of auditors

During the period the following fees were paid or payable for services provided by the auditor of the parent entity, its related practices and non-related audit firms:

#### (a) Ernst & Young

	Consolidate Year en	•
	2015 \$	2014 \$
Audit and other assurance services Audit and review of financial statements Other assurance services	124,400	122,000
Audit of regulatory returns Other services	341,700 16,300 358,000	441,800 10,500 452,300
Total remuneration for audit and other assurance services	482,400	574,300

#### 24 Contingencies

The Group is subject to claims and other matters in the ordinary course of business. To the extent these matters are not provided in the financial report, the matters represent contingencies at 31 December 2015.

The Group had no material contingent liabilities or assets at 31 December 2015 (2014: nil).

#### 25 Investments in associates

Investments in associates are accounted for in the consolidated financial report using the equity method of accounting and are carried at cost by the parent entity. Information relating to the associates is set out below.

	Compan	Company's share of:		
	2015 %	2014 %		
UE & Multinet Pty Ltd	50	50		

#### 26 Investments in controlled entities

The consolidated financial statements incorporate the assets, liabilities and results of the following controlled entities in accordance with the accounting policy described in note 3:

Name of entity	Country of incorporation	Class of shares	Equity 1	holding
•	·		2015	2014
			%	%
UEIP Pty Ltd	Australia	Ordinary	100	100
United Energy Finance Pty Ltd	Australia	Ordinary	100	100
Utilities Consulting Services Pty Ltd	Australia	Ordinary	100	100
United Energy Finance Trust	Australia	Units	100	100

### 27 Reconciliation of profit after income tax to net cash inflow from operating activities

	Consolidated entity Year ended	
	31 December 2015 \$'000	31 December 2014 \$'000
Profit for the period	85,217	904
Depreciation and amortisation	141,462	134,650
Net (gain) loss on sale of non-current assets	4,193	2,146
Customer contribution in kind	(6,808)	(7,503)
Discount on loan	151	152
Change in operating assets and liabilities:		
(Increase) in trade debtors and bills of exchange	50,932	(20,743)
(Increase) in inventories	(278)	(2,599)
(Increase) decrease in deferred tax assets	(4,301)	4,618
(Decrease) increase in trade creditors	1,888	(2,549)
(Decrease) increase in deferred tax liabilities	34,789	27,871
(Decrease) increase in other provisions	(198)	1,346
(Decrease) increase in derivative financial instruments	(44,919)	7,692
Net cash inflow (outflow) from operating activities	262,128	145,985

United Energy Distribution Pty Ltd Directors' declaration 31 December 2015

#### In the directors' opinion:

- (a) the financial statements and notes set out on pages 4 to 38 are in accordance with the accounting policies described in Note 1 to the financial statements, including:
  - (i) complying with Accounting Standards and other mandatory professional reporting requirements, to the extent described in Note 1 to the financial statements, and
  - (ii) present fairly, the consolidated entity's financial position as at 31 December 2015 and its financial performance and cash flows for the year ended on that date, and
- (b) there are reasonable grounds to believe that the company will be able to pay its debts as and when they become due and payable.

This declaration is made in accordance with a resolution of directors.

Mr Peter Lowe Director

Melbourne

Ernst & Young 8 Exhibition Street Melbourne VIC 3000 Australia GPO Box 67 Melbourne VIC 3001 Tel: +61 3 9288 8000 Fax: +61 3 8650 7777 ey.com/au

### Independent auditor's report to the directors of United Energy Distribution Pty Ltd

We have audited the accompanying special purpose financial report of United Energy Distribution Pty Ltd ("the Licensee"), which comprises the statement of financial position as at 31 December 2015, and the income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows for the year ended on that date, a summary of significant accounting policies, other explanatory notes and the directors' declaration.

#### Directors' Responsibility for the Financial Report

The directors of the Licensee are responsible for the preparation of the financial report and have determined that the basis of preparation described in Note 1 to the financial report is appropriate to meet the Regulatory Information Requirements of the Australian Energy Regulator ("AER") and is appropriate to meet the needs of the directors. The directors are also responsible for such controls as they determine are necessary to enable the preparation of the financial report that is free from material misstatement, whether due to fraud or error.

#### Auditor's Responsibility

Our responsibility is to express an opinion on the financial report based on our audit. We conducted our audit in accordance with Australian Auditing Standards. Those standards require that we comply with relevant ethical requirements relating to audit engagements and plan and perform the audit to obtain reasonable assurance about whether the financial report is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial report. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial report, whether due to fraud or error. In making those risk assessments, we consider internal controls relevant to the entity's preparation of the financial report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal controls. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the financial report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

#### Independence

In conducting our audit we have complied with the independence requirements of the Australian professional accounting bodies.

#### Opinion

In our opinion the financial report of United Energy Distribution Pty Ltd as of and for the year ended 31 December 2015 has been prepared, in all material respects, in accordance with the accounting policies described in Note 1 to the financial statements and the Regulatory Accounting Information Requirements of the AER.

#### Basis of Accounting

Without modifying our opinion, we draw attention to Note 1 to the financial report and which describes the basis of accounting. The financial report is prepared to assist United Energy Distribution Pty Ltd to meet the requirements of United Energy Distribution Pty Ltd Regulatory Information Notice issued by the AER. As a result the financial statements may not be suitable for another purpose. Our report is intended solely for United Energy Distribution Pty Ltd and the AER and should not be distributed to parties other than United Energy Distribution Pty Ltd or the AER.

### 1 Purpose

The purpose of the Fixed Asset Procedure paper is to establish principles by which United Energy accounts for items of Property, Plant & Equipment and selected Intangible assets in its General Ledger to ensure fixed asset information is accurately reflected in generating financial and management reports.

### 2 Executive Summary

This procedure provides an overview of the capitalisation principles for United Energy. This procedure has considered accounting, tax, regulatory and business considerations in assessing whether an asset should be capitalised.

This procedure sets out high level procedures which will enable the fixed asset registers to accurately record, update, extract and report on fixed asset information in the general ledger for financial and management reporting, tax, legal and regulatory.

#### 3 Definitions

For purposes of this procedure, unless otherwise stated, the following definitions shall apply:

Australian Accounting Standards Board
The total depreciation taken for an asset since it was placed in service. Also known as life-to-date depreciation and depreciation reserve
Amortisation is the systematic allocation of the cost of an intangible asset over its useful life
Australian Energy Regulator
A resource controlled by an entity as a result of past transactions and from which future economic benefits are expected to flow to the entity. The common understanding of an asset is that it is an item (tangible or intangible) that is considered to have an enduring value
Either tangible, intangible or in kind
The Board of United Energy Distribution Holding Pty Ltd and all of its subsidiaries, known as UE Group (UE)
Shows the financial information regarding the expenditure, depreciation and treatment of the asset within the Fixed Asset module.
Expenditure incurred on capitalised assets
Assets recorded on a fixed asset register that depreciate or amortise where applicable and have a useful life of more than one year

Capital Project	A project to build or purchase one or more depreciable or amortisable fixed assets
CEO	Chief Executive Officer
CFO	Chief Financial Officer
CIRB	Capital Investment Review Board
Consumable	Spares and spare parts that are consumables are inventory that are used up/issued/sold or incorporated in other items during construction, maintenance or repair work. They can be in use over more than one period.
Depreciate	To spread the cost of an asset over its useful life. Depreciation expense is charged for the asset each period. The total depreciation taken for an asset is stored in the accumulated depreciation account
DOA	Delegation of Authority
Expenditure	This represents costs incurred by United Energy in the operation of the business
Expensed	Expenditure incurred is included as operational expenditure attributing to the statement of income position for the period (i.e. profit and loss). It is also referred to as 'opex' expenditure.
Fixed Asset	An asset owned by the business recorded on the SAP Fixed Asset Register
Future economic benefit	Is synonymous with the notion of service potential. The future economic benefit embodied in an asset is the potential to contribute, directly or indirectly for a period greater than one year, to the flow of cash and cash equivalents to United Energy
Intangible Asset	An intangible asset is an identifiable asset without physical substance
ITEF	Information Technology Executive Forum
MG	Multinet Group Holding Pty Ltd and all its subsidiaries
Opex expenditure	Refer 'Expensed' definition

IS	Information Systems			
IT	Information Technology			
OMSA	Operational and Management Service Agreement. An agreement between UE and their Service Providers covering multiple issues.			
SAP	Software used by UE to record and manage it business processes including the general ledger			
Period	The time period of 12 months			
Procurement policy	This is the policy that provides guidelines and controls for purchasing in UE & MG			
PP&E	Property, plant and equipment are tangible items that:			
	(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and			
	(b) are expected to be used during more than one period			
PM Module	Plant Maintenance Module of SAP. This module contains operational information on selected network assets.			
Service potential	The total future service capacity of an asset. It is normally determined by reference to the operating capacity and economic life of an asset.			
Spare	An item or finished product that is classified as property, plant or equipment and is not installed or in use. E.g. a spare circuit breaker			
Spare part	A (replaceable) component or sub-assembly of an item of property, plant or equipment that is not installed or in use. E.g. Capacitor can			
Tangible Asset	Tangible assets are items of PP&E that:			
	(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and			
	(b) are expected to be used during more than one period			
UE	United Energy Distribution Holdings Pty Ltd and all of its subsidiaries			
Useful life	The period over which an asset is expected to be available for use by an entity			
WBS	Work Breakdown Structure is a SAP term used to identify expenses and capital purchases			

WIP	Work In Progress represents capitalised expenditure on assets that are either not completed, not installed, not available or not ready for use

### 4 Scope

The procedure is intended to set out guiding principles United Energy should apply when evaluating whether expenditure should be capitalised or expensed. The procedure identifies types of assets and covers high level classifications of assets and sets out the significant events that may occur in a fixed asset register during the life of an asset.

The procedure does not represent a full set of instructions for capitalising an asset but rather a set of guidelines for assessment. Disclosures are not detailed in this procedure document.

The procedure does not cover intangible assets that are not recorded in the SAP Fixed Asset module such as goodwill, licences etc.

This procedure does not address:

- Impairment as outlined in AASB136 Impairment of Assets. This is addressed in policy COR-057-POL
- The justification and approval of expenditure as this is covered in other policies, primarily the procurement policy, PRO-004-POL
- Insurance of assets as this is covered in insurance policy UE-MGH CI 001
- Leased Assets as outlined in AASB 117 Leases
- Customer Contributions
- Inventories as outlined in AASB 102 Inventories
- Non Current Assets held for sale and Discontinued Operations AASB 5

#### 5 Procedure

### 5.1 Types of Fixed Assets

An asset is a resource controlled by an entity as a result of past transactions and from which future economic benefits are expected to flow to the entity<sup>1</sup>. The common understanding of an asset is that it is an item (tangible or intangible) that is considered to have an enduring value. **To be recognised as an asset it has to have a useful life of more than one year and a measurable value.** 

Fixed assets on the SAP fixed asset register are categorised as either tangible or intangible assets.

#### 5.1.1 Tangible Fixed Assets:

Where a fixed asset is categorised as tangible, it is classified on the balance sheet as part of Property, Plant & Equipment and subject to the Australian Accounting Standards Board Standard 116 Property, Plant and Equipment (AASB 116) requirements.

Property, plant and equipment are tangible items that:

- a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and
- b) are expected to be used during more than one period.2

A tangible asset is a physical asset i.e. it can be physically seen and touched. Examples include land, buildings, network assets, plant, equipment, motor vehicles, office furniture etc.

#### 5.1.2 Intangible Fixed Assets:

Where a fixed asset is categorised as intangible, it is classified on the balance sheet as part of Intangible Assets and subject to the Australian Accounting Standards Board Standard 138 Intangible Assets (AASB 138) requirements.

An intangible asset is an identifiable asset without physical substance.3

An example of an intangible asset on the fixed asset register is software. There can be other intangible assets such as goodwill and licences however these are outside the scope of this procedure.

Refer to the 'Intangible Expenditure' section of this procedure for more detail.

#### 5.1.3 In Kind Assets:

<sup>&</sup>lt;sup>1</sup> AASB 138, paragraph 8

<sup>&</sup>lt;sup>2</sup> AASB 116, paragraph 6

<sup>3</sup> Based on the definition in AASB 138, paragraph 8

An in-kind asset is an asset or a portion of an asset that is gifted to UE by a customer. The asset arises where a customer elects to build an asset instead of UE building the asset. Ownership of the asset to UE is handed over on completion. The customer's contribution towards the asset is called an 'in-kind' contribution.

The value of United Energy's network assets is increased by the estimate of the value of the 'in-kind' portion of the asset and offset with the recognition of revenue for 'in-kind contributions'. This is similar to a donation with the distinguishing factor being the customer is required to gift the assets to the distribution company according to the current regulatory regime. An in-kind asset is also a type of tangible asset.

### 5.2 What's the difference between "expensed" and "capitalised"?

**Expensed** This means that the expenditure incurred is included as operational expenditure attributing to the statement of income position for the period (i.e. profit and loss). It is also referred to as 'opex' expenditure.

**Capitalised** This means that the expenditure is recognised as an asset in the balance sheet and is depreciated or amortised over the life of the asset which must be greater than one year. It is also referred to as 'capex' expenditure.

### 5.3 Identifying Expenditure to be Capitalised

United Energy have no dollar amount threshold for expenditure to be considered of a capex or opex nature. A common misconception is that the business has a capital threshold of \$300, \$500 or \$1,000 below which all expenditure is considered to be opex in nature. This is incorrect. All expenditure must be considered against the statements contained in this procedure for a decision on whether the expenditure is classified as capex or opex.

Decisions to either capitalise or expense expenditure incurred in relation to the acquisition or construction of assets is largely a matter of professional judgement. This view is reiterated in the accounting standards, which offer guidance to help professionals make these decisions but provide few examples of costs that must be treated as either capital or expense.

If after reading this procedure, further guidance is required, contact the Fixed Asset Accountant.

#### Recognition Criteria:

There are different criteria for recognising tangible and intangible assets.

#### Tangible:

The cost of an item of property, plant and equipment shall be recognised as an asset if, and only if, a) It is probable that the future economic benefits associated with the item will flow to the entity; and

b)	The	cost	of ti	he i	tem	can	be	measured	reliablv⁴.
----	-----	------	-------	------	-----	-----	----	----------	------------

Intangible:

<sup>&</sup>lt;sup>4</sup> AASB 116, paragraph 7

The recognition of an item as an intangible asset requires an entity to demonstrate that the item meets:

- (a) The definition of an intangible asset
  - i. Identifiable i.e. it is separable or arises from contractual or other legal rights
  - ii. The entity has control over the asset
  - iii. Future economic benefits must flow from the asset e.g. revenue from the sale of goods or services, cost savings or other benefits resulting from the use of the asset by the entity and
- (b) The cost of the item can be measured reliably<sup>5</sup>.

For the elimination of doubt, probable future economic benefits means the asset is expected to be used during more than one period, i.e. greater than one year.

It is worth noting that expenditure is capitalised until an item of property, plant and equipment is in the location and condition necessary for it to be capable of operating in the manner intended by management. This will need to be assessed on an asset by asset basis as management intentions may change on completion of an asset. Refer to the 'Exception' under 'Information Services Expenditure Classification' section of this procedure for an example.

This means allowable expenditure can be accumulated as capital up to the time the asset is installed and ready for use, after which, certain expenditure must then be expensed.

#### Allowable Expenditure for Capitalisation under the Accounting Standards i.e. Capex:

AASB 116 para 11	Items of property and equipment may be acquired for safety and environment reasons. Such acquisitions although possibly not directly increasing the future economic benefits of any existing item of PP&E may be necessary for an entity to obtain a future economic benefit from its other assets. For instance, the expenditure of upgrading plant and equipment to meet more stringent environmental regulations could be capitalised on the basis that the business could not operate the assets and derive an income without first meeting the regulations and incurring the expenditure.	
AASB 116 para 13	Partial replacement of an asset can be capitalised where this contributes to future economic benefits of the asset in that they either:  • Extend the useful life of an asset  • Improve its output  • Reduce the operating cost of the asset.  The carrying amount of the parts that are replaced needs to be identified and retired. Repairs and maintenance costs are excluded from being capitalised, refer to 'Disallowable Expenditure for Capitalisation under Accounting Standards' in this procedure.	
AASB 116 para 14 Costs incurred in performing regular major inspections for faults regardless of whether of the existing assets are replaced. Any remaining carrying amount of the cost of preinspection must first be derecognised.		
AASB 116 para 16 (a)	The purchase price of an item of PP&E, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates.	
AASB 116 para 16(b)	Any costs directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management.	

<sup>&</sup>lt;sup>5</sup> AASB 138, paragraph 11 to 24

<sup>&</sup>lt;sup>6</sup> AASB 116, paragraph 20

AASB 116 para 16(c)	The initial estimate of the costs of dismarking and removing the item and restoring the site
0.3.157	on which it is located, the obligation for which an entity incurs either:
	when the item is acquired; or
	as a consequence of having used the item during a particular period.
	Note: These costs may arise under a legal or constructive obligation per AASB 137
	Provisions, Contingent Liabilities and Contingent Assets, paragraph 14 (a).
AASB 116 para	decis of employee beliefite (as defined in 18 teb 116 Employee Belleting allowing
17(a)	from the construction or acquisition of the item of property, plant and equipment.
AASB 116 para 17(b)	Costs of site preparation.
AASB 116 para 17(c)	Initial delivery and handling costs.
AASB 116 para 17(d)	Installation and assembly costs.
AASB 116 para	Cost of testing whether the asset is functioning properly, after deducting the net proceeds
17(e)	from selling any items produced while bringing the asset to that location and condition
	(such as samples produced when testing equipment).
AASB 116 para 17 (f)	
AASB 116 para 49	Depreciation of pre-existing assets employed in the production of a new asset (i.e.
	depreciation expense directly attributable to equipment used in the construction of network asset).
AASB 116 para 22	The cost of a self-constructed asset is determined using the same principles as for an acquired asset.
	This means a self-constructed asset's cost includes direct material, direct labour, any costs
	directly attributable to bringing the asset to the location and condition necessary for it to be
	capable of operating in the manner intended by management and an appropriate proportion
	of any directly attributable production overheads.
AASB 123 (12)	Interest (or borrowing costs) associated with funds borrowed expressly for the purpose of
	obtaining a qualifying assets. A qualifying asset is defined in AASB 123 para 5 as 'An
	asset that necessarily takes a substantial period of time to get ready for its intended use or
	sale'.
UIG 1031 para 7	GST that is not recoverable from the tax authorities.

In addition to the above expenditure may be capitalised where it has been incurred to remove an asset and replace it with another asset and this expenditure is incidental, difficult to separate from the overall expenditure and also incurred to install the replacement asset, E.g. if a pole is being replaced, the labour cost incurred to remove the old pole before the replacement pole can be installed may be capitalised. If expenditure is incurred to remove an existing asset without installing a new asset then this expenditure must be expensed as it has no future economic benefit.

All expenditure to be capitalised is subject to the "measurement at recognition" criteria as per AASB 116 paragraph 15 & AASB 138 paragraphs 18 to 24 which requires all capitalised expenditure to be measured at its cost.

#### Disallowable Expenditure for Capitalisation under the Accounting Standards

AASB 116 para 12  The costs of day-to-day servicing of the asset. This may include labour a consumables and the cost of small parts. The purpose of these expenditures is of described as 'repairs and maintenance'. Expenditure that does not increase the level economic benefits that flow from the use of an asset in future periods must be treated expense when incurred.				
AASB 19(a)	116	para	Costs of opening a new facility.	
AASB 19(b)	i   Occident of introducing a flow product of screece (including costs of advertising an			
AASB 19(c)	116	para	Costs of conducting business in a new location or with a new class of customer.	

AASB 116 para 19(c), AASB 138 para 15 and AASB 138 para 67(c)  Costs of staff training. An entity may have a team of skilled staff and metal identify incremental staff skills leading to future economic benefits from entity may also expect that the staff will continue to make their skills are entity. However, an entity usually has insufficient control over the expect that the staff of skilled staff and from training for meet the definition of an intangible asset.	
AASB 116 para 19(d)	Administration and other general overhead costs.
AASB 116 para 20(c) Costs of relocating or reorganising part or all of an entity's operations. This mean relocation costs of moving an existing physical asset from one location to another costs of para 20(c) be capitalised.	
AASB 116 para 20	Costs are excluded from capital once the asset is in the location and condition necessary to be capable of operating in the manner intended by management.
AASB 116 para 21 Incidental income or expense generated by the asset prior to it being capable of used for its intended purposes.	
AASB 116 para 22 The cost of abnormal amounts of wasted material, labour or other resources self-constructing an asset.	
UIG 1031 para 6	GST that is recoverable from the tax authorities.
AASB 116 para 48 Depreciation expense, unless it is included in the carrying amount of another AASB 116 para 49.	
AASB 138 para 97 Amortisation of intangible assets unless AASB 138 or another accoun permits or requires it to be included in the carrying amount of an asset.	

### 5.4 Capital Expenditure Financial and Procurement Controls

Capital Expenditure has various types of categories as outlined in the sections above. This section outlines the framework of documents that establish the procurement and financial controls over the capital expenditure within the UE business for each category of capital.

Some non network projects are also governed by individual steering committees.

#### 5.4.1 Capital Expenditure Procurement Controls

There are a number of documents that create a procurement capital expenditure control framework. Each document contains specific controls within the capital expenditure process. The documents (other than this procedure) include:

- Procurement Policy Provides Guidelines and controls for all expenditure procurement
- Procurement Manual Provides procedural approach for purchasing
- Delegation of Authority Policy Establishes purchasing authority
- Accounts Payable Policy Provides overview of controls over payments for all expenditure

#### 5.4.2 Capital Expenditure Financial Controls

There are a number of documents that establish the financial controls for capital expenditure. Each document contains specific controls within the capital expenditure process. The documents (other than this procedure) include:

- Investment Management Procedure Controls capital allocation in SAP
- Annual Budgeting Policy Controls the total allowed expenditure for the financial year

Creating the Intelligent Utility

- Forecasting Policy Provides controls over expected capital expenditure for the forecast period to compare against the approved budget.
- CIRB Charter Review of capital expenditure especially capital expenditure greater than \$1m and any capital expenditure that may impact UE's risk profile (this is discussed further below).

IT Project Financial Management Process

#### 5.4.3 CIRB Sub Categories and OMSA Capital Expenditure Controls

The CIRB will review and endorse business cases in excess of \$1M that fall within its Charter. The categories of UE capital expenditure are shown below.

Capex Category	Definition		
Standing Capex	This relates to expenditure as detailed in the OMSA where there are prescribed rates with corresponding thresholds. This expenditure is incorporated into the annual capital expenditure budget. This is approved prior to the start of the financial year by the GM – Electricity Networks and General Manager Service Delivery.		
Individual Capex Projects	This relates to capital expenditure on individual projects and is governed via a tiered process.  • Small - less than \$20k  • Medium - between \$20k and \$100k		
	<ul> <li>Large - greater than \$100k</li> <li># Refer to the Delegation of Authority Policy for approval thresholds.</li> </ul>		
Customer Initiated Capital (CIC)	This relates to projects initiated by customers, the expenditure for which governed by a tiered process under the OMSA.  • Small - less than \$50k  • Medium - between \$50k and \$200k  • Large - greater than \$200k  # Refer to the Delegation of Authority Policy for approval thresholds. The CIRB will review any offer that is greater than \$1M and either has major network implications or is a non-standard Customer Contribution (not accordance with Guideline 14 of the Electricity Industry guideline).		
Non - Network Distribution	This relates to any capital expenditure not directly related to the network. For example building a new fence at Burwood depot, service provider fleet purchases etc.		

#### 5.4.4 Non CIRB Direct Capital Expenditure Controls

This category of capital Expenditure is governed by budget that are allocated each financial year.

Capex Category	Definition	
Non Network Other	Non Network Other includes work on non network assets paid directly by UE. It includes	
	<ul> <li>In house fleet purchases, accommodation fitout and</li> <li>Miscellaneous non network capital expenditure.</li> </ul>	

#### 5.4.5 IT Executive Forum Capital Expenditure Controls

This category of IT capital Expenditure is governed by budget that are allocated each financial year. Refer to the Delegation of Authority Policy for approval tiers.

Capex Category	Definition	
IT Executive Forum	<ul> <li>All projects over \$500k have a business case approved by the Head of Information Technology and the relevant delegate under the DOA policy.</li> </ul>	

ITEF endorses expenditure above \$500k. ITEF is the IT equivalent of the CIRB and consists primarily of Executive membership.

#### 5.5 Capital Work in Progress

At any time, United Energy is involved in the construction of capital projects. Expenditure incurred in relation to these projects is recorded in one and/or two Work in Progress (WIP) general ledger accounts, tangible and intangible WIP. The expenditure is recorded against capital projects in SAP (via the use of a WBS), until the asset(s) under the project are in the location and condition necessary for them to be capable of operating in the manner intended by management i.e. physically complete.

As tangible assets are required to be classified in the balance sheet as part of PP&E and intangible asset are required to be classified in the balance sheet as an intangible, it is necessary for all capital projects to be established in SAP with separate WBS projects for their tangible and intangible components. This requirement is most commonly required for IS projects where hardware is purchased and software is either purchased and/or developed in-house. It is therefore necessary to also assign the correct tangible or intangible WBS element to all expenditure under the project.

A project is considered complete when the asset(s) are in the location and condition necessary for them to be capable of operating in the manner intended by management. When a project is complete, the value of capital accumulated in WIP must be transferred to final, depreciating or amortising assets in a timely manner.

There may be projects where there is a difference between physical completion and financial completion of a project.

<u>Physical completion</u> means the asset(s) are in the location and condition necessary for them to be capable of operating in the manner intended by management. For intangible projects, this means the software has gone live and is production i.e. the 'go-live' date.

<u>Financial completion</u> means the project is physically complete and also all expected expenditure incurred on the project has been charged to the project.

There can be significant time differences on major and even minor projects between physical and financial completeness. It is not uncommon for differences of 9-12 months.

Projects must be cleared from WIP:

- (a) When the project is first considered to be physically complete
- (b) Then each month thereafter when further expenditure has been incurred on the physically complete project.

When the last costs have been incurred on the project, the final transfer from WIP should be processed and the capital project closed.

It is the responsibility of IT, service providers and other departments within UE to review WIP. The Management Accountant of each area must provide the Fixed Asset Accountant evidence of the review on a three monthly basis via email, completed within four weeks of each quarter end. The UE WIP KPI should be referenced to form the basis of the review.

The Fixed Asset Accountant is responsible for reporting non-compliance with this procedure to their Manager.

#### 5.6 Intangible Expenditure

Intangible project expenditure can be capitalised where they meet the definition and recognition criteria for a tangible asset under AASB 116 *Property, Plant and Equipment* or for an intangible asset under AASB 138 *Intangible Assets*. Information Technology hardware is a tangible asset, falling under AASB 116 while software and deferred expenditure is considered an intangible asset, falling under AASB 138.

Computer software for a computer-controlled machine tool that cannot operate without that specific software is an integral part of the related hardware and is treated as PP&E. The same applies to the operating system of a computer. When the software is not an integral part of the related hardware, computer software is treated as an intangible asset.<sup>7</sup> This is usually referred to as application software.

The ability to capitalise intangible expenditure under AASB 138 is a two step process.8

The first step is for the expenditure to meet the identifiability criterion<sup>9</sup>.

- (a) [the item] is separable, i.e. is capable of being separated or divided from the entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, identifiable asset or liability, regardless of whether the entity intends to do so; or
- (b) [the item] arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.

The second step is for the expenditure to meet the recognition criteria 10:

- (a) it is probable that the expected future economic benefits that are attributable to the asset will flow to the entity; and
- (b) the cost of the asset can be measured reliably.

#### 5.6.1 Internally Generated

<u>Internally generated</u> intangible assets must be classified into either a research phase or a development phase.

(a) Research is original and planned investigation undertaken with the prospect of gaining new scientific or technical knowledge and understanding.<sup>11</sup> In the research phase of an internal project, an entity cannot demonstrate that an intangible asset exists that will generate probable future economic benefits so the expenditure is expensed when it is incurred.<sup>12</sup> Examples of research activities are<sup>13</sup>:

<sup>&</sup>lt;sup>7</sup> AASB 138, paragraph 4

<sup>8</sup> AASB 138, paragraph 18

<sup>&</sup>lt;sup>9</sup> AASB 138, paragraph 12(a) & 12(b)

<sup>10</sup> AASB 138, paragraph 21 (a) & 21(b)

<sup>&</sup>lt;sup>11</sup> AASB 138, paragraph 8

<sup>12</sup> AASB 138, paragraphs 54 & 55

<sup>13</sup> AASB 138, paragraph 56

- i. activities aimed at obtaining new knowledge
- ii. the search for, evaluation and final selection of, applications of research findings or other knowledge
- iii. the search for alternatives for materials, devices, products, processes, systems or services; and
- iv. the formulation, design, evaluation and final selection of possible alternatives for new or improved materials, devices, products, processes, systems or services.

An example of the research phase would be activities completed prior to the development of a business case.

- (b) *Development* is the application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, devices, products, processes, systems or services before the start of commercial production or use.<sup>14</sup> In the development phase of an internal project, an entity can, in some instances, identify an intangible asset and demonstrate that the asset will generate probable future economic benefits. This is because the development phase of a project is further advanced than the research phase.<sup>15</sup> Examples of development activities are:<sup>16</sup>
  - i. the design, construction and testing of pre-production or pre-use prototypes and models
  - ii. the design of tools, jigs, moulds and dies involving new technology
  - iii. the design, construction and operation of a pilot plant that is not of a scale economically feasible for commercial production; and
  - iv. the design, construction and testing of a chosen alternative for new or improved materials, devices, products, processes, systems or services.

Expenditure relating to the development phase may be capitalised if the entity can demonstrate **all** of the following:<sup>17</sup>

- (a) the technical feasibility of completing the intangible asset so that it will be available for use or sale
- (b) its intention to complete the intangible asset and use or sell it
- (c) its ability to use or sell the intangible asset
- (d) how the intangible asset will generate probable future economic benefits. Among other things, the entity can demonstrate the existence of a market for the output of the intangible asset or the intangible asset itself or, if it is to be used internally, the usefulness of the intangible asset
- (e) the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and
- (f) its ability to measure reliably the expenditure attributable to the intangible asset during its development.

#### 5.6.2 Information Services Expenditure Classification

15 AASB 138, paragraph 58

<sup>14</sup> AASB 138, paragraph 8

<sup>&</sup>lt;sup>16</sup> AASB 138, paragraph 59

<sup>&</sup>lt;sup>17</sup> AASB 138, paragraph 57

The following are examples of Information Services expenditure reflecting scenarios where the expenditure may be either capitalised or expensed.

- Hardware maintenance support incurred at the same time as the initial capitalisation of the hardware. This support is typically for a period between twelve months and three years. United Energy capitalise the expenditure of this support against the asset as it is deemed to be necessarily incurred in bringing the asset into use.
- Hardware maintenance support incurred subsequent to the initial capitalisation of the hardware. This is typically support for a 12 month period. United Energy do not capitalise this expenditure. There are no future economic benefits to United Energy beyond a 12 month period so the expenditure cannot be considered to be capital in nature. Such expenditure may be initially classified in the balance sheet as a prepayment and recognised as an expense in the profit and loss over the 12 months of the maintenance period.
- Software maintenance support incurred at the same time as the initial purchase of the software. This support is typically for a period of 12 months. United Energy capitalise the expenditure of this support against the asset as it is deemed to be necessarily incurred in bringing the asset into use.
- Software maintenance support incurred subsequent to the initial capitalisation of the software. This
  is treated the same as hardware maintenance support incurred subsequent to the initial
  capitalisation of the hardware.
- Software licence fees. If the licence is for a 12 month period United Energy do not capitalise this expenditure. If the licence is for a period beyond 12 months it may be capitalised and amortised over the shorter of the period of the license or United Energy's useful life for software.

#### 5.6.2.1 Exception

The exception to the above is where expenditure that would otherwise not be allowed to be capitalised is necessarily incurred in bringing the asset into the condition necessary for use. Such expenditure ceases to be capitalised when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management.

This means that expenditure on items such as 12 month hardware and software maintenance may be capitalised up to the 'go-live' date of the project as part of the overall software asset(s) capitalised for the project. After the 'go-live' date any annual software maintenance cannot be capitalised and must be treated as outlined above.

#### 5.6.3 Information Services Cloud Expenditure

#### 5.6.3.1 Overview

Broadly, cloud services are computing services provided over the internet, and paid for as they are used.

In reality, solutions that utilise cloud services will often also include the creation of a capital asset as part of that solution.

 The solution may include an integration layer, so that the cloud services can interact with existing UE and MG systems. That integration layer is likely to be a capital asset.

Or the solution may utilise some cloud services, but include built or licensed software capital
assets of various kinds in addition to the cloud service.

So there will be components of the solution that need to be treated as Capex, and components that need to be treated as Opex.

#### 5.6.3.2 General

Components of a solution that are cloud based, and paid for on a 'pay as you go' basis, are treated as Opex.

Components of a solution that are built or licensed up front are treated as Capex, unless the period of the license is less than or equal to 12 months, in which case the expenditure is treated as Opex.

If a solution includes Capex components, the project to deliver the solution is a capital project and those components that are cloud based 'pay as you go' components are treated as Capex up until the go-live date.

- · Training is always Opex
- Relocating assets is always Opex
- If something is built or licensed as Capex, it needs to remain in the ownership of UE in order to stand as Capex
- The asset must provide future economic benefit for longer than 12 months to be classified as Capex
- If a project commences as a Capex project, but does not proceed, the expenditure should be reclassified to Opex
- Trials, pilots, proofs of concept and research expenditure, for the purpose of learning or evaluating, are always Opex.

#### 5.6.3.3 General Types of Cloud Services for deployment of software

wh	pe of Cloud Services on nich business software n be deployed	Component	Explanation
1.	Business Software on Infrastructure as a Service	Deploy/License your own applications	The applications on top of this platform are Capex, because UE build or license them as assets that have future economic benefit for more than 12 months.
		Deploy/License your own platforms	The platforms on top of this cloud are Capex, because UE build or license them as assets that have future economic benefit for more than 12 months.

Type of Cloud Services on which business software can be deployed	Component	Explanation
	Infrastructure as a Service (Cloud)  (Pay as you go alternative to purchasing hardware. Eg AWS storage service)	No data centre, instead the infrastructure is provided as a service.  The infrastructure as a service is Opex, but it can be capitalized as part of the above Capex project up until the go live date provided the expenditure incurred is incremental and is the result of developing/testing activities post the research phase.
2. Business Software on Platform as a Service	Deploy/License your own applications	The applications on top of this cloud are Capex, because UE build or license them as assets that have future economic benefit for more than 12 months.
	Platform as a Service (Cloud)  (Pay as you go alternative to purchasing tools and technology systems. E.g. database systems or development frameworks in the cloud.)	No data centre, instead the platforming is provided as a service.  The platform as a service is Opex, but it can be capitalized as part of the above Capex project up until the go live date provided the expenditure incurred is incremental and is the result of developing/testing activities post the research phase.
	Includes Infrastructure (Cloud)	No data centre, instead the infrastructure is provided as a service.  The infrastructure as a service is Opex, but it can be capitalized as part of the above Capex project up until the go live date provided the expenditure incurred is incremental and is the result of developing/testing activities post the research phase.

wh	pe of Cloud Services on nich business software n be deployed	Component	Explanation
3.	Business Software as a Service	Software as a Service*  (Pay as you go for applications. E.g. Procurement System, HRIS system, Gmail)  *This includes the platform and infrastructure	Everything including the business application is provided as a service.  The application as a service is Opex. However, it can be capitalized if it is implemented as part of a Capex project, up until the go live date, provided the expenditure incurred is for activities post the research phase.  Integration with existing UE systems might be required. If so, then the project to build an integration layer, so that the cloud software can integrate with existing UE systems, could be a Capex project, provided that UE build or license an asset that has future economic benefit for more than 12 months.

#### 5.7 Easements

#### 5.7.1 Easement definition

An easement is a right held by one entity to make specific, limited use of land owned by another entity. An easement is granted by the owner of the property for the convenience, or ease, of the person using the property.

Common easements include

- the right to pass across the property
- the right to construct and maintain a roadway across the property
- the right to construct a pipeline or a power line on or over the land.

Easements may be granted by government bodies, companies or individuals and may or may not be acquired for a fee.

#### 5.7.2 Easement expenditure classification

Irrespective of whether easements are compulsory acquired or by agreement, amounts paid are capitalised.

The amounts capitalised do not have a specific fixed asset class, and are capitalised as part of the relevant project.

Amounts will be classified as land on the fixed asset register where a clear title is secured.

#### 5.8 Overhead Allocation

Expenditure can only be capitalised to a project where the underlying asset is clearly identifiable. This means that any overhead expenditure may only be capitalised if it can be directly attributable to an underlying asset or a group of underlying assets. As a result of this, all capitalised overhead must be allocated to the individual capital project(s) to which it relates as opposed to accumulating all overhead into one capital project. If the overhead expenditure cannot be allocated to an appropriate individual project(s), the overhead expenditure must be expensed when incurred.

As an example the Capital Project Estimator labour time may be included as part of capitalised overhead attributable to a group of projects in any given month.

In some instances it may be deemed that a portion of an employee's labour cost may be directly attributable to a project(s). In these circumstances the capital portion of the project related expenditure may be capitalised to a group of projects in any given month.

#### 5.9 Allocation of Assets between Entities

One physical asset can only be owned by one company. In some cases the physical asset may only be a part, but the part must be a recognisable separate component. This means that with the exception of the below, there can be no percentage allocation of an individual tangible asset between United Energy and Multinet Gas or any other entity.

If a percentage allocation is required, the value for each individual tangible asset must still be 100% allocated to one entity but the apportionment can be achieved by assigning individual assets between the two entities. For example if two vehicles were purchased, with a 50% allocation to United Energy and a 50% allocation to Multinet Gas, United Energy should be charged with the value of one vehicle and Multinet Gas charged with the value of the other vehicle. This means United Energy would own 100% of one vehicle rather than owning 50% of two vehicles.

Where the development of the software is unique and for the sole benefit of only one business, no issue arises with regard to financial allocation of capital expenditure. Where the development of the software is for the benefit of multiple business, each business will receive an asset on the basis of either their financial contribution to the total project expenditure or based on their intended use of the software e.g. user based. The basis for the allocation should be detailed in the business case.

#### 5.9.1 Exception

Shared assets are allowed where there is an agreement covering separation<sup>18</sup>. E.g. assets subject to the Joint Business Agreement Term Sheet. Such assets include IT Services, IT Assets, IT Projects and accommodation fit-out capital expenditure.

\_

<sup>&</sup>lt;sup>18</sup> As per email from David Strang 24 December 2012 at 11:47am

#### 5.10 Spares

<u>In summary</u>, spares and spare parts may be transferred to PP&E from inventory where the underlying asset's original useful life is extended or improved and where such items are expected to be used for longer than one period.

Spares and spare parts are initially classified as property, plant and equipment where such items are expected to be used over more than one period and are a standalone item, however, this excludes parts and consumables used in day to day servicing of the asset.

If spares and spare parts do not meet this definition, such items are classified as inventory. Spares and spare parts are initially classified as inventory when they do not result in an extension of the useful life of an asset or significantly enhance its net value, or improve the asset beyond the asset's original condition/specification/modern day equivalent. These parts are normally expensed when consumed because when used in such a manner they would be considered repairs and maintenance.

Distribution transformers and meters are an exception to the above. These are initially held as inventory and upon installation are transferred to PP&E, where they are used as a component of or as a whole of a self-constructed asset. Once transferred to PP&E these are recognised as an expense during the useful life of the asset via depreciation.

Once classified as PP&E, when the asset becomes idle or is removed from the network from active use:

- The balance sheet classification does not change; and
- Depreciation does not cease unless the asset is fully depreciated.

Below are some examples of spares and spare parts and their classification when they are **initially** purchased:

Spare or spare part description	Classified as PP&E	Classified as Inventory	
Zone substation transformer	✓	×	
Circuit breaker (complete unit)	✓	×	
On-load tap changer	×	<b>✓</b>	
66kV Bushing (Transformer)	×	✓	
22kV Bushing	×	✓	
Current Transformer – Outdoor (e.g. 66kV Post Type)	✓	×	
Current Transformer – switchboard (Indoor Type)	×	<b>√</b>	
ACR / RCGS / RMU	✓	×	
Underground Cable	×	<b>✓</b>	
Any switchboard component that is not a cubicle or Circuit Breaker	×	✓	
Capacitor Can	×	✓	
Distribution Transformer	×	<b>✓</b>	
Meter	×	✓	

#### 5.11 Depreciation

Depreciation is the systematic allocation of the cost of a tangible asset over its useful life.

Land is not depreciated as it is assumed to last indefinitely.

Buildings, machinery, equipment, furniture, fixtures, computers, cars, and trucks are examples of assets that will **last for more than one year**, but will not last indefinitely. During each accounting period a portion of the cost of these assets is being used up. The portion being used up is reported as depreciation expense on the income statement. In effect depreciation is the transfer of a portion of the asset's cost from the balance sheet to the income statement during each year of the asset's life.

A fundamental accounting concept is the matching principle. This principle requires a business to match expenses with related income in order to report a company's profitability during a specified time interval. For tangible assets this is done by depreciation.

This principle requires that the asset's cost be allocated to depreciation expense over the life of the asset. In effect the cost of the asset is divided up with some of the cost being reported on each of the income statements issued during the life of the asset. By assigning a portion of the asset's cost to various income statements, the business is matching a portion of the asset's cost with each period in which the asset is used.

#### 5.12 Amortisation

Amortisation is the systematic allocation of the cost of an intangible asset over its useful life. In all other respects the explanation for amortisation is the same as the explanation for depreciation.

#### 5.13 Depreciation / Amortisation Start & Finish

Depreciation and amortisation of an asset should commence when an asset is available for use, that is, when it is in the location and condition necessary for it to be capable of operating in the manner intended by management. <sup>19</sup> Taking this date into account, **United Energy commences depreciation from the first day of the next month.** 

Depreciation for PP&E spares will commence from the first day of the next month that the spare is available for use. Although the spare may not be in the location and condition necessary (installed) for use (or may never be used) the spare should be depreciated over time due to the risk of obsolesce or technology change, reflecting general deterioration which means there is a decline in future economic benefit.

Depreciation and amortisation does not cease when an asset becomes idle or removed from active use, unless the asset is fully depreciated.

Depreciation and amortisation ceases at the earlier of the date that the asset is classified as held for sale and the date that the asset is retired, subject to materiality.<sup>20</sup>

Creating the Intelligent Utility

<sup>19</sup> AASB 116, paragraph 55

<sup>&</sup>lt;sup>20</sup> AASB 116, paragraph 55 & AASB 138 paragraph 97

The amount of depreciation or amortisation charged against an asset in the month of disposal is based on the asset value date used on the asset retirement:

Asset value date used	Amount of depreciation or amortisation charge in the month of disposal	
Between the 1st and the 15th day of the month	None	
From the 16th day to the end of the month	A full month	

#### 5.14 Method of Depreciation and Amortisation

For tangible assets a variety of depreciation methods can be used to allocate the depreciable amount of an asset on a systematic basis over its useful life. These methods include the straight-line method, the diminishing balance method and the units of production method. <sup>21</sup>

For intangible assets the amortisation method used shall reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity. If that pattern cannot be determined reliably, the straight-line method shall be used.<sup>22</sup>

United Energy always use a straight line method of depreciation and amortisation for accounting purposes.

Where an asset's useful life is changed during the life of the asset, depreciation or amortisation is then allocated using a straight line method based on the remaining life of the asset.

#### 5.15 Useful Life

Useful life is the period over which an asset is expected to be available for use by an entity<sup>23</sup>.

The estimation of the useful life of the asset is a matter of *judgement* based on the experience of the entity with similar assets.<sup>24</sup> The useful life should be determined taking into account the following factors:

Physical life	This requires an estimate of the period of time the asset is expected to be used. It is usually an outer limit of an asset's effective life.
Engineering information	An analysis of engineering information and manufacturer's specification. The life of a new asset may differ from that achieved in the past due to advances in technology, different materials, intensity of use and the level of repairs and maintenance.
Industry norm	The useful life used by other similar business for the same asset obtained via sources such as the internet, regulatory information or Australian Taxation Office useful lives

<sup>&</sup>lt;sup>21</sup> AASB 116, paragraph 62

<sup>22</sup> AASB 138, paragraph 97

<sup>23</sup> AASB 116, paragraph 6

<sup>&</sup>lt;sup>24</sup> AASB116, paragraph 57

Intensity of use	The intensity of use can have a direct impact on the asset's effective life.
Repairs and maintenance	The effective life of an asset may end when it is no longer economic to maintain it, even though it may be possible to do so.
Renewals	The estimate of when the asset will be wholly or substantially physically replaced.
Lease periods	Assets such as fixtures and fittings in leased premises should be depreciated over the shorter of their estimated useful life or the lease term.
Obsolescence	Can occur due to a number of factors including technical, regulatory or environmental

Normally the useful life adopted by an asset is the default useful life assigned against the fixed asset class the asset is held against in the fixed asset module of SAP.

The reason for the actual useful life adopted as the default useful life on an asset class must be documented and approved by the Fixed Asset Accountant's manager.

The useful life may differ from the default life for individual assets if, after taking into account the factors above, it is more appropriate to adopt a different useful life. Where a different useful life is adopted the reason for the useful life should be documented in the long text description field against the asset on the fixed asset register. The Fixed Asset Accountant is responsible for making such decisions. If the individual asset's life varies from the asset class default and the acquisition cost is:

- below \$200k no further authorisation is required for the use of the different useful life
- above \$200k the Fixed Asset Accountant should recommend the different useful life and is required to obtain authorisation from the Fixed Asset Accountant's manager.

In some cases it is appropriate to adopt a remaining life to an asset. For example IT disk drives fit within an enterprise storage box/frame. Upon purchase of a frame, the life assigned to the drives held within the frame should be the same as the life of the frame. If additional disk drives, held within the same frame, are added at a later date, the life to assign to the additional drive should be that of the remaining life of the frame. Where a remaining life is adopted no authorisation for the adoption of the remaining life is required.

Some assets are subject to continuous improvement such as SAP software enhancements. Where this occurs, such improvements may adopt a useful life from the time of the improvement implementation recorded in the fixed asset register in calendar year annual blocks, rather than adopting a remaining life from the initial implementation.

Land and Work In Progress assets are not depreciated or amortised.

#### 5.16 Retirement

Retiring an asset means removing it from United Energy's balance sheet i.e. derecognising the asset. This occurs upon disposal or when no future economic benefits are expected from its use or disposal.

Where an asset is no longer contributing future economic benefit to the business, the asset must be retired from the fixed asset register. This may be at a different time from the physical disposal of the asset for tangible assets. E.g. a motor vehicle will no longer be in use when it has been sent to auction but there may be a delay of weeks before the auction occurs, the proceeds from the auction are received and therefore before the retirement can be processed.

The most common type of retirement is the scrapping of a network asset (e.g. a pole) where no proceeds are received from its disposal. Other examples where an asset retirement is required include where assets are lost, stolen, damaged, sold, traded-in or removed from service with no intention to be reinstalled or written off as a result of an asset register review (refer Annex C).

Where an asset is removed from service and is cannibalised for spare parts, the asset is unlikely to contribute any material future economic benefit and so the asset should be retired.

Assets are not retired from the fixed asset register when their accounting written down value becomes zero. An asset that is fully depreciated and continues to be used in the business will be reported on the balance sheet at its cost along with its accumulated depreciation. No entry is required until the asset is disposed of through retirement, sale, etc.

The exception to this is for certain aged assets that are difficult to keep adequate inventory control over for accounting purposes. These are usually various low value assets grouped on the asset register under one asset number for each calendar year e.g. miscellaneous tools and equipment. For these assets no details are kept on the fixed asset register so it will be unknown when each individual asset making up the original value is physically disposed. An annual review of the fixed asset register to identify these fully written down assets should occur and these assets retired from the fixed asset register (refer Annex C).

#### 5.16.1 Sale

For an asset to be sold there must be proceeds. Where an asset can be sold, the amount of the proceeds requested from the purchaser of the asset should be determined taking into consideration the market value of the asset. The asking price must be inclusive of GST.

The accounting written down value is not the amount at which the asset should be sold. An asset can only be sold at the price that a buyer is prepared to pay for it. This may or may not be close to the accounting written down value.

All assets must be sold in an "as is condition" with no warranty/no guarantee/no support/buyer beware status.

In the absence of a readily available market value or the goods are not sold at arm's length then the sale must document the reasoning for the disposal price.

All sales must have a tax invoice or a recipient created tax invoice which states details of the asset. The Fixed Asset Accountant must be notified of the sale and provided with a copy of the tax invoice or the recipient created tax invoice.

Any expenses incurred in disposing of the asset should be deducted from the proceeds for the purposes of calculating the profit or loss on disposal of the asset.

Computers must have all licensed software and business information deleted before being sold or disposed. In the case of computers sold, the original operational software is to be re-installed on the machine. All trademarks or logos must be removed before handover of the asset to the buyer.

#### 5.16.2 Other Proceeds

The Fixed Asset Accountant must be notified of the receipt of any proceeds for any retirement.

#### 5.16.2.1 Scrap Proceeds

Under the Operational and Management Service Agreement (OMSA), any net proceeds received as a result of the disposal of United Energy assets belongs to United Energy. Net proceeds means the gross proceeds received less any costs incurred in disposing of the asset.

If the cost of disposal is greater than the gross proceeds, United Energy pay the Service Provider the difference. The difference is accounted for as opex expenditure.

Please refer to the procurement policy to appoint an approved seller for scrap material.

Generally there are two types of proceeds received:

- (a) Proceeds for the scrap metal value of many former miscellaneous network assets, accumulated into a skip for disposal. Once the skip is full, proceeds are received for the value of the scrap metal contained in the skip. As these proceeds are not for individually identifiable assets, the net proceeds will be accounted for as miscellaneous revenue
- (b) Proceeds for the scrap associated with the disposal of larger individually identifiable assets e.g. transformers in zone substations which contain metals and oil. In such cases the net proceeds received will be accounted for as proceeds received on the disposal of fixed assets.

All net proceeds are not to be accounted for as an offset against capital expenditure.

The AMI meter contracts allow scrap value to be kept by the contractors installing the AMI meters.

#### 5.16.2.2 Public Lighting Proceeds

Existing public lighting is being retrofitted with sustainable public lighting by some councils. In such cases the AER annually review the distributors compensation allowed for the early retirement of the existing public lights. The compensation allowed by the AER is the proceeds on the retirement of the fixed asset.

#### 5.16.3 Trade in

The Fixed Asset Accountant must be notified and provided with all support documentation when any asset(s) is traded in.

Any value attributed to an asset on trade in will constitute proceeds on disposal. An accounting journal will need to be processed which increases the value of the new asset.

The asset being traded in will be retired from the fixed asset register with the trade in value creating a profit or loss dependant on the written down value.

All trade in transactions must have a tax invoice or a recipient created tax invoice which states details of the asset. The asking price must be inclusive of GST.

#### 5.17 Authorisation of the retirement of an asset

Assets held in the fixed asset registers are retired by a number of different ways.

Refer Annex A which sets out the various processes applicable to retirement of the different classes of assets.

#### 5.18 Fixed Assets Registers

United Energy operates three fixed assets registers. These are:

- a) Accounting
- b) Federal Tax
- c) Regulatory

The accounting and tax fixed asset registers are held in SAP.

#### 5.18.1 Accounting Fixed Asset Register

Expenditure is capitalised in order to achieve agreed business outcomes. Assets lives are to be determined with regard to the expected effective life of the assets. Refer to the 'Useful life' section of this procedure. All assets are depreciated on a straight line basis.

#### 5.18.2 Tax Fixed Asset Register

All items are to be capitalised on the same basis as accounting with the following exceptions:

- a) Most historical fixed assets in United Energy are being depreciated using the diminishing value method of depreciation where allowed. For new fixed assets, if a straight line depreciation method is used the depreciation rate is based on the effective life. If a diminishing value method of depreciation is used, depreciation is based on the effective life, with a 200% uplift.
- b) Where legislation prescribes an effective life or a set depreciation method
- c) Feeder fixed assets replacing an existing asset will be claimed as a repair to the extent that it is not an improvement or functionally different to the asset being replaced. These assets must be expended and transferred from work-in-progress within the financial year otherwise they will be capitalised as additions to the tax fixed asset register
- d) The value of the In kind contribution for assets is initially added to the tax fixed asset register but is reversed out twice yearly in December and June. This means the value of in-kind assets are not added to the tax fixed asset register
- e) Certain assets may need to be allocated to certain classes for depreciation for example low value assets or assets which form part of a project pool relating to a specific project; and
- f) If it is not clear how an asset should be depreciated for tax purposes the asset should be referred to the Tax Manager.

#### 5.18.3 Regulatory Fixed Asset Register

All assets capitalised for accounting should be capitalised to the regulatory fixed assets register on a straight line basis except for the following:

- a) In kind assets are not capitalised
- b) Customer contributions reduce the value of the assets added
- c) The value removed from the regulatory fixed asset register for asset retirements is only the value of proceeds received from the sale of assets.

The regulatory fixed asset register is not held in SAP. The information captured for accounting purposes on additions and disposals is used to complete the Excel spread sheets used to determine the regulatory fixed asset values.

## 6 Related policies/standards/legislation

The following policies, procedures, guidelines and manuals relate to the Fixed Asset Procedure and can be read where they are specifically referred to within the Procedure:

# 7 Implementation and Compliance

- a) This Procedure will be implemented by Finance.
- b) Any non-compliance under this Procedure must be reported to the Head of Financial Accounting and Controls.

29 | Page

- c) There are a number of fixed asset controls in place to ensure the integrity of the fixed asset register. Refer Annex B.
- d) There are a number of controls which effectively monitor the fixed asset register on a monthly, half yearly, annual basis and other periodic basis. Refer Annex C.
- e) UE has the right to, at its absolute discretion, to alter or modify this procedure.

# 8 Document history

Version	Date	Amended By	Description of Changes
1	16-May-12		Original approved policy
2	30-April-14	Sue Edwards/Peter Ajani	Included procurement section  Altered quarterly WIP review requirements, Altered example of research phase, Altered allocation of assets between entities Inserted useful life treatment for assets that are continuously improved Updated related policies/standards table Annex A— Inserted new section for ZABL retirements & minor changes to other sections
3	31-Oct-15	Sue Edwards	Included easement section Totally revised spares section Included guidance on IT cloud expenditure Altered the tax fixed asset register section Included classification of operating verses application software expenditure Updated the Capital Expenditure Financial and Procurement Controls section Changed the title of the document from 'Policy' to 'Procedure'

#### Annex A: Retirement Authorisation Process

All retirements are subject to the DOA 003-POL Delegated Financial Authority Policy.

The following set outs the various retirement processes depending on the type or class of the asset.

#### Selected Network Assets using the SAP Settlement processes

Most assets retired are network assets. The retirement of these assets is generally processed in SAP via the use of the ZUSDM001 *Settlement Details* program used by Service Providers to settle capital jobs from work-in-progress to final, depreciating assets.

In the 'Tech Object ID' field the SAP Plant Maintenance equipment record(s) is input representing the network asset worked on under the capital job. Against each row an action of N (new), A (abolish) or I (improve) is required. A fixed asset retirement will be triggered when an action of 'A' is input and the ZUSDM013 Fixed Asset Write Offs from Settlement Screen Abolishments program is run by the Fixed Asset Accountant.

Settlement Informa	ion									ale:	
Work Order No											
WBS Element N	5										
Total Cost	0.00										
Settlement State	S										
Settlement No	The second	ETHIC									
								ALAST SPECIE			
									Delete Row	-3	Insert R
								THE RESERVE AND PARTY AND PERSONS ASSESSED.	manufacture with the said.		-
Item No Te	h Object ID	Description	Type Quantity	UOM	FXA	Sub No	FXA Class	Description	% Cost	N	A 1
Item No Te	h Object ID	Description	Type Quantity	MOU	FXA	Sub No	FXA Class	Description	% Cost	_	0 0

The program has been written to contain a warning if the accounting written down value of the asset being abolished is greater than \$50k.

The retirements processed via the ZUSDM013 program are reviewed for reasonableness by the Fixed Asset Accountant each month. Any material write off or assets retired that were recently capitalised and have a write off value greater than \$1k are queried. Any incorrect retirements identified will be reversed by the Fixed Asset Accountant.

No direct authorisation of these ZUSDM013 retirements is required.

#### Selected Network Assets using the SAP Abolishment processes

In addition to the above, there are instances of network assets being retired that are not processed as part of the SAP settlement process. An example is distribution transformers. These may be removed from the network due to an upgrade. The removed transformer is sent to Stores to be reviewed to determine if it can be reused. It is therefore the personnel working in Stores that makes the abolishment decision so the personnel responsible for the upgrade works never finds out the status of the removed transformer to input into the ZUSDM001 screen.

SAP transaction ZABL *Fixed Assets Write Offs from Settlement Screen Abolishments* is used in UE SAP to process a financial write off, with the input of just the plant maintenance equipment number or functional location.

No direct authorisation of these ZABL retirements is required.

#### Meters

Network meters are not retired via the ZUSDM001 program.

In the Asset Owner Finance meeting held on 21st December 2009 the decision was made that all non AMI meters would not be retired when they are removed from service. This was because they are being depreciated to a maximum of the date the meter installation program is expected to be complete so for ease of administration and because the remaining life is very short, no retirements would be processed. These fixed assets will be removed from the fixed asset register when the program is complete.

Details of AMI meter retirements is sourced from the SAP Plant Maintenance module where the meter records are held. The meters have already been removed from service for various reasons when the status of the Plant Maintenance record is updated to indicate the meter is no longer in service. These are high volume transactions for assets with relatively low individual value. The meters will be retired by the Fixed Asset Accountant based on the quantity of meters disposed for each meter type, by the year installed. No direct authorisation of these retirements is required.

#### **Public Lighting**

The public lights removed from service as a result of councils retrofitting their existing public lighting with sustainable public lighting will be removed from the fixed asset register on first-in-first-out (FIFO) basis with their proceeds. A FIFO basis is used because the actual ages of the lights being removed are unknown. Confirmation of the quantity of public lights changed over is required before the Fixed Asset Accountant can process the retirement. The quantity confirmation will be taken as authorisation for the fixed asset retirement to be processed.

#### **Retirements Arising From Fixed Asset Reviews**

Retirement of fixed assets identified from reviews of the fixed asset register, refer Annex C, are required to be authorised by the Fixed Asset Accountant's manager. A list of the assets recommended for write off containing both the accounting and federal tax original acquisition cost and current written down values must be included in the detail provided by the Fixed Asset Accountant.

#### **Motor vehicles**

The Fleet and Inventory Officer is responsible for authorising all motor vehicle related disposals except where controlled by a service provider.

The Service Providers follow a historical process where the annual budget process identifies vehicles which may be nominated by them to be disposed. This budget is approved by United Energy. Once the annual budget is approved, this is the authorisation for the Service Provider to dispose of a United Energy vehicle. The net proceeds from the sale of the vehicle belong to United Energy.

32 | Page

#### Information Technology

Information Technology (IT) hardware asset disposals would normally be identified by United Energy's 3<sup>rd</sup> party service provider. They would normally make a recommendation to United Energy for the replacement or disposal of an item.

The authorisation for the retirement of an IT hardware asset is required from the Service Delivery Manager who will make a business decision on whether to proceed with the replacement or disposal.

Where the decision is made for an item to be replaced or disposed, it is the responsibility of the Service Delivery Manager to ensure:

- a) All data has been erased from the hardware prior to disposal
- b) The Configuration Management Database (CMDB) has been updated; and
- c) The Fixed Asset Accountant has been notified of the disposal and supplied with sufficient information to ensure the item(s) disposed can be identified on the Fixed Asset Register and also informed of any proceeds attributable to the disposal.

The Fixed Asset Accountant is responsible for ensuring the assets are removed from the Fixed Asset Register after receiving written confirmation of the disposal from the Service Delivery Manager.

#### Other Assets

Any other asset not listed above requires the approval of the Fixed Asset Accountant's manager in order to be retired from the fixed asset register.

#### **Annex B: Fixed Asset Controls**

In SAP all network assets are capitalised to the SAP accounting fixed assets register. For Operational activities selected network assets are reflected in the plant maintenance equipment records. The SAP Plant Maintenance (PM) module contains hundreds of thousands of records for many, but not all, network assets. Each record in this module usually represents one physical network asset.

#### Controls for Allocation of Asset Class - Linked to PM Module

The PM module links into the fixed asset register to ensure that when the assets are recorded from an operation perspective the information flows into the fixed asset register with predefined business rules determining the correct allocation to asset classes and financial settlement.

To ensure capital is posted to the correct asset class a SAP program 347 Validate In Service Equipment, was implemented. Under this 347 enhancement, table ZUSDMTT004 – FXA Class Mapping Table – Equipment has been established to provide some business rules to ensure a valid fixed asset number, plant maintenance category, plant maintenance class and plant maintenance object type these are assigned to all 'In Service' and 'Out of Service' plant maintenance equipment.

Below are the columns in the table with a sample of three rows:

Eq. Cat	Description	Object Type	Description	Equipment Class	Asset Class	Description	FXA Class 1 to 1 R/ship (Ind)	Jah Sup Ohj	Active
5	Switchgear	SWITCH_DST	Switch Distribution	SWITCH	30142	Network Switchgear	х		х
Т	Transformers	DIST_TRANS	Distrib Transformer	TRANSFORMER DIST	30141	Network SubsTransf	x		х
z	Domestic (Zsub)	COOLING	Cooling	COOLING_SYSTEM	32000	Network Buildings	х		х

#### Controls for Allocation of Asset Class - Not in PM Module

Where an asset is not part of the PM module most assets are created manually by the Fixed Asset Accountant based on information obtained from relevant personnel. The asset numbers created are manually input on the settlement rule on the capital project and capital is transferred from work-in-progress to the final, deprecating asset(s) created. No additional check is completed on these assets as it is considered that the Fixed Asset Accountant will correctly exercise their professional judgement to ensure the assets are capitalised to the correct fixed asset class.

#### Stocktake

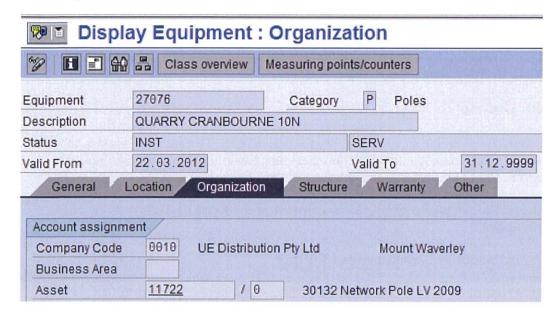

United Energy does not undertake periodical physical stocktakes of their tangible assets. For most of United Energy's tangible fixed assets this is impractical and would be extremely time consuming to complete. The risk of a material misstatement in the assets is low due to the nature of the assets being generally immobile and having very long lives.

An alternative to completing a physical stocktake and still obtaining some confirmation of the accuracy of the fixed asset records is to periodically reconcile the fixed asset records to sub systems that may exist for the different types of fixed assets.

The SAP Plant Maintenance (PM) module is used to link selected physical assets and the financial value for the assets.

Each record in the PM module usually represents one physical network asset. Each PM record has one field called the 'Asset' field which contains the fixed asset number which corresponds to the fixed asset register of SAP where the value of the asset is held.

Rolling reconciliations between these two modules should be completed on a cycle of 5 years.

## **Annex C: Monitoring Controls**

The following activities are completed periodically that is monthly, half year and yearly to ensure the accuracy of the fixed asset registers. This process identifies errors and anomalies in a timely manner designed to ensure reporting packs, half yearly and annual accounts reflect accurate fixed asset information. There are additional reviews for half year and annual reviews. There are other reviews undertaken at varying intervals to check various classes of assets.

#### **Monthly Reconciliation Control**

Each month the SAP fixed asset module is reconciled to the general ledger. The reconciliation is the responsibility of the Fixed Asset Accountant to complete in accordance with the reconciliation policy. Any material variances are required to be investigated and resolved in a timely manner.

The reconciliation is required to be reviewed by a separate member of the Finance Team, usually the Fixed Asset Accountant's manager.

#### **Monthly Depreciation & Amortisation Reasonableness Control**

Each month the Fixed Asset Accountant will compare the total accounting depreciation and amortisation charged to the profit or loss against the prior months' charge. An increase or decrease in the charge per month in excess of 5% will require further investigation and the explanation documented in the Excel file used to complete this control.

Such variances are usually caused by significant additions, disposals, significant assets finishing their useful life or a change in the useful life of an asset or class of assets.

#### **Half Yearly Depreciation & Amortisation Monitoring Control**

At six monthly intervals a review of all assets on the fixed asset register is completed to ensure all assets that should be being depreciated are actually being depreciated in the accounting fixed asset module. The review is the responsibility of the Fixed Asset Accountant to complete.

These assets are identified by running SAP report ZFAL – *Fixed Asset List* for all assets and downloading the report into Excel. The download is reviewed and the following assets are removed from the list in the order below:

- All land and work-in-progress assets
- All assets with a written down value of zero
- All assets with a depreciation charge in the current year
- · All assets with a depreciation start date of the next month from the date of the review

The remaining assets are assets with an accounting written down value greater than zero but have no depreciation charge in the current year when depreciation should be being charged.

A problem that exists within the fixed asset register is that new capital expenditure is allocated to very old existing assets. Typically this occurs against **underground cable** assets and **poles**. It can also occur on assets which have a depreciation charge of less than \$1 per year.

#### 1. Underground cable

The capitalisation of new capital to old assets is occurring mainly as a result of the replacement of terminations of high voltage underground cable, required only on paper cable. There is a special procedure that makes the termination of high voltage underground cable safe. The last five meters of the cable is filled with oil and over time this drains away making the cable unsafe. Where this occurs the last five meters of cable needs to be replaced, often at both ends.

A review is undertaken to specifically identify such assets. Once identified the assets are transferred from the non-depreciating asset to the current yearly grouped asset in the same asset class.

#### 2. Poles

The capitalisation of new capital to old assets is occurring mainly as a result of the replacement of pole top structures on the poles. A pole top structure would normally only be replaced where the pole is assessed to have a minimum of a 15 year remaining life.

A review is undertaken to identify these assets. Once identified the assets life is amended so the new capital will depreciate over the next 15 years, being the minimum remaining life.

#### **Annual Monitoring Control**

#### Review of useful life and method

On an annual basis, at the end of each annual reporting period, the Fixed Asset Accountant will reassess the depreciation method, useful life and residual values assigned to the fixed assets.

Typically this review is completed by the Fixed Asset Accountant emailing the appropriate personnel to confirm the current useful lives and written down value of the assets and receiving a written reply on their opinion of the reasonableness of the life and written down values.

#### Review of fully depreciated assets

Certain aged assets are not monitored due to the volume and value of the asset. These are usually various low value assets grouped on the asset register under one asset number for each calendar year e.g. Miscellaneous tools and equipment. For these assets minimal details are kept on the fixed asset register and there is no record of when the assets are physically disposed.

To address this issue, an annual review is undertaken by the Fixed Asset Accountant for these assets to identify fully written down assets. Once identified, these assets are reviewed and where appropriate these assets are retired from the fixed asset register, in accordance with the 'Retirement' section of this procedure.

Creating the Intelligent Utility

#### Other Annual Reviews

#### **Motor Vehicles**

Motor vehicle asset are by their nature very mobile and have a regular change over cycle. A reconciliation of the records on the fixed asset register to Service Provider records and United Energy's records should be completed on an annual basis.

#### Fixture and Fitting in Leased Premises

Fixture and fittings in leased premises should contain the date of the end of the lease term in the 'Last Inventory On' field on the fixed asset module of SAP. Some leases are written with options for lease extensions. The date recorded in the 'Last Inventory On' field should be the date of the next option. The fixed asset register records for these assets should be reviewed on no less than an annual basis.

#### Other Periodic Reviews

#### Three year Reviews

The following types of assets are a valuable asset to United Energy but are quite immaterial compared to the total value of all of United Energy's tangible fixed assets:

- Office equipment
- Mobile Telephones
- Laptops and Desktops
- Printers
- Office Furniture

These assets should be reviewed at least once every three years. Unless an individual physical asset has a written down value greater than \$50k, no stocktake of these items is required. For items with a written down value greater than \$50k, confirmation that they are still in use in the business should be obtained by the Fixed Asset Accountant from relevant personnel.

Information Technology hardware assets should be reviewed at least once every three years by sending a list of the relevant fixed assets on the Fixed Asset Register to appropriate personnel and requesting their confirmation that the assets are still in use.

#### **Five Year Reviews**

Building assets should be reviewed at least once every 5 years.

Reconciliations between Plant Maintenance Module and the Fixed Asset Register should be completed on a staggered rolling cycle of 5 years.

#### **Ten Years Reviews**

Land assets should be reconciled to the latest United Energy's land tax assessment notice at least once every ten years.

#### 1. Overview

UE is the licensed entity charged with carrying out the role of electricity distribution in accordance with all legal and regulatory requirements. The AER has made three final decisions that are relevant for the purposes of the Annual Financial RIN. These being:

- 2011 to 2015 Distribution determination
- 2011 to 2015 Public lighting determination
- 2012 to 2015 AMI Final Decision

These decisions provide the benchmarks against which actual expenditure is measured against, opening regulatory asset bases and depreciation allowances for the 2015 calendar year.

The information contained in the documents submitted to the AER was prepared is in line with United Energy's approved Cost Allocation Methodology.

The financial information has been reconciled with the relevant regulatory accounting statements and statutory accounts, and the principles underpinning the calculation of figures are in line with statutory accounting policies.

The remaining sections of this appendix provide details of United Energy's approach as follows:

- Section 2 Cost allocation approach
- Section 3 Cost Allocation Methodology
- Section 4 Capitalisation Policy

# 2. Cost allocation approach

The following table provides details of United Energy's cost allocation. All costs have been directly allocated.

Table 1: Operating expenditure - Allocation approach

#### 1 Introduction

United Energy Distribution (UED) is one of five electricity distribution network service providers operating under licence within the State of Victoria, with assets totalling approximately \$3.0 billion. UED's network provides services to some 630,000 end-use customers in Melbourne's southern and eastern suburbs, with its area of operation confined to geographically defined boundaries set out in the Distribution Licence. A map is provided below;

UED is ultimately owned 66 per cent by Diversified Utility and Energy Trust (DUET) and 34 per cent by SPI (Australia) Assets Pty Ltd (SPIAA). Refer section 5 for more details.

### 2 Cost Allocation Methodology

### a. Version History

Under clause 11.17.5 of the National Electricity Rules (Rules) UED is required to submit to the AER for approval a Cost Allocation Methodology (CAM) as part of its regulatory proposal. UED has chosen to submit a CAM to the AER for approval prior to its formal regulatory proposal so that the regulatory proposal can be submitted without any amendments required due to a change in the CAM.

This CAM is version 1.0.

The date of issue is the date of approval.

The date of commencement is 1 January 2011.

On approval UED will post this CAM on UED's website (www.unitedenergy.com.au)<sup>1</sup>.

\_

<sup>&</sup>lt;sup>1</sup> See clause 6.15.4(h) of the Rules

### 3 Nature Scope and Purpose of the document

The purpose of this document is to set out the Cost Allocation Method (CAM) to be adopted by UED for the purposes of allocating costs in accordance with the requirements of the NER from 1 January 2011<sup>2</sup>.

As required by clause 6.15.4(c) of the Rules and clause 3.1(b) of the Cost Allocation Guidelines for Victorian electricity distribution network service providers dated June 2008 (CAG), this CAM gives effect to and is consistent with the CAG.

### Specifically,

- Clause 2.2.1(a) the CAM contains detailed principles and policies to attribute costs directly to, or allocate costs between, different categories of distribution services to enable the AER to replicate reported outcomes and for the DNSP to demonstrate it is meeting the requirements of the CAG;
- Clause 2.2.1(b)(1) the CAM contains two tables, titled capital activities and maintenance activities, that describe the nature and characteristics of each cost item and which distribution service they are attributed to. The CAM separately describes UED's record keeping;
- Clause 2.2.1(b)(2) a list is provided of cost centres and how these shared costs are allocated to distribution services. The nature of the allocators and the reasons for the selection of those allocators is described, as is the treatment of those allocators that will change during the regulatory period. The allocators are appropriate as they are causal or, if non causal, the basis of allocation is described (and is consistent with clause 2.2.4);
- Clause 2.2.2 costs are attributed or allocated based on the substance of the underlying transaction or event
- Clause 2.2.5 the CAM is deigned to ensure there is no double counting of shared costs:
- Clause 2.2.6 the CAM is consistent with the distribution ring fencing guidelines;
- Clause 2.2.7 costs will not be re-allocated during the course of a regulatory control period;
- Clause 2.2.8 the CAM has regard to previous cost allocation in accordance with the ESC distribution pricing determination and allows effective comparison of historical and forecast cost allocation between the period to

.

<sup>&</sup>lt;sup>2</sup> See clause 1.4(b) and 5.1(b) of the CAG.

which the ESC distribution pricing determination applies and later regulatory control periods. There is an allocation of costs between operating expenditure and capital expenditure (as was relevant to the ESC distribution pricing determination) and between Direct Control Services (Standard and Alternative Control Services) and Negotiated Services (which accords with the allocation to Regulated by Price Cap and Excluded Services during the ESC distribution pricing determination period);

### Consistency with Cost Allocation Principles

Having met the requirements of the CAG, it follows that the CAM is consistent with the Cost Allocation Principles required by clause 6.15.2 of the NER. For completeness, however, we note that the CAM meets those principles as follows:

- Clause 6.15.2 (1) this CAM contains sufficient detailed principles and policies to allocate costs between different categories of distribution services to enable the AER to replicate reported outcomes;
- Clause 6.15.2 (2) costs have been allocated according to the substance of a transaction or event rather than its legal form;
- Clause 6.15.2 (3) costs have been allocated either directly attributed to the services or costs have allocated using an appropriate allocator;
- Clause 6.15.2 (4) cost allocations are clearly described in the CAM including reasons for using specific allocators;
- Clause 6.15.2 (5) costs are not allocated more than once
- Clause 6.15.2 (6) the principles, policies and approach used to allocate costs are consistent with the Distribution Ring-Fencing Guidelines;
- Clause 6.15.2 (7) costs allocated to a particular service will not be reallocated to another service during the course of a regulatory control period.

Requirements of clause 11.17.5(d)(3) of the Rules

Clause 11.17.5(d)(3) is also relevant as UED's proposed CAM differs from the method previously used by it.

In July 2003, UED entered into an Operating Services Agreement (OSA) with Jemena Asset Management (JAM6) under which Jemena provides to UED construction and maintenance services. These services relate to Regulated by Price Cap and Excluded Services and the fee paid by UED is fixed according to various provisions of the OSA.

UED allocates this fixed operating fee paid between Regulated by Price Cap and Excluded Services by using allocators derived from 2002. That year was the last full year of operation prior to the OSA and therefore applying the allocation from that year provides a positive correlation between the basis of allocation and the

services that the costs represent. It is an allocation methodology that has been accepted by UED's auditors and by the Essential Services Commission in the preparation of UED's Regulatory Accounts.

This allocation methodology will apply until 30 June 2011 after which the current OSA will not continue. From 1 July 2011, the policies and principles set out in the CAM will apply.

### **Mapping**

Current Description	Proposed description
Regulated by price cap	Standard Control
Excluded services	Alternative Control
Prescribed Services	AMI OIC
Other	Non regulated

### Comparison of historic cost allocation methodology compared to proposed CAM

Item (current)	Current methodology	%	Item (proposed)	Proposed methodology	%
Regulated by price cap	Costs are directly allocated where possible. Shared costs are allocated in accordance with the benchmark allowances in the 2001 EDPD	83%	Standard Control	Costs are directly allocated in accordance with the description provide in this CAM. Shared costs are allocated based on revenue.	81.0%
Excluded services	Costs are directly allocated where possible. Cost not directly allocated are based on 90% of revenue earned.	9%	Alternative Control	Costs are directly allocated in accordance with the description provide in this CAM. Shared costs are allocated based on revenue.	5.2%
Prescribed Services	Costs are directly allocated where possible. Shared costs are allocated in accordance with the benchmark allowances in the 2001 EDPD	7%	AMI OIC	Costs are directly allocated in accordance with the description provide in this CAM and the CROIC. Shared costs are allocated based on revenue.	13.8%
Other	Not applicable	0.0%	Non regulated	Not applicable	0.0%
		100.0%			100.0%

### 4 Accountabilities

The board of UED is responsible for ensuring the overall performance and governance of UED and its subsidiaries.

In order to assist the board in effectively discharging its powers and duties, it has delegated responsibility for the day-to-day operation and management of UED to the CEO, and the senior management team. The board retains the ultimate legal responsibility for the exercise of powers delegated to senior management. The CEO and senior management are required to report to the board on the exercise of these powers on an ongoing basis.

As described in section 5 of this CAM, UED has appointed Pacific Indian Energy Services (PIES) as its agent to perform management services for it. As its agent, PIES is responsible for providing the 'Services' set out in the Management Services Agreement to UED. In summary, these include (without limitation), developing the regulatory strategy for UED, and ensuring compliance by UED with all legal and regulatory matters. These services are provided pursuant to the delegation and under the authority of the board.

The CEO, CFO & Company Secretary, COO and other senior management (who are employed by PIES) are appointed as officers of UED pursuant to this agency arrangement. Specific responsibilities delegated to management are summarised in Section 5 of this CAM. The agency arrangement does not, at law, impact on their accountability as officers of UED, or on the board's legal obligations.

UED's detailed principles and policies for attributing costs to, or allocating costs between, different categories of distribution services that meet the requirements of clause 2.2 of the CAG is described in this CAM.

Responsibility for updating, maintaining and applying this CAM is with the Chief Financial Officer. The Chief Financial Officer is also responsible for internally monitoring and reporting on the application of this CAM.

In meeting these responsibilities, the Chief Financial Officer is accountable to the board of UED, as outlined above.

UED is committed to implementing this CAM.

### 5 Description of UED's corporate and operational structure

UED's organisational and operational structure has been developed so that it aligns with business strategy and stakeholder expectations.

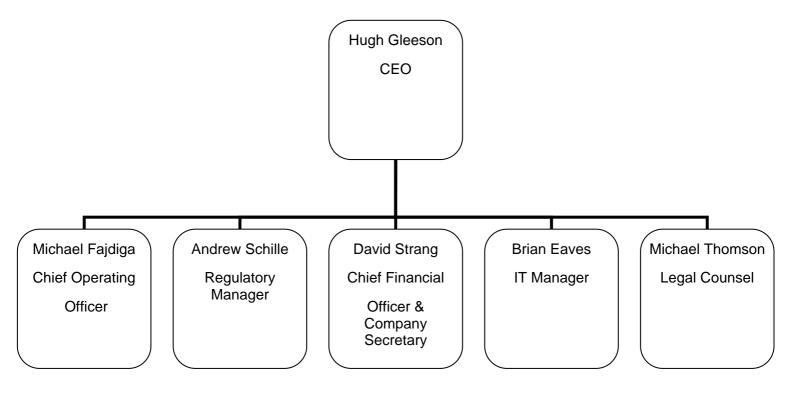

The roles and responsibilities of each general manager are described below:

- CEO company management, strategic planning, business structure, stakeholder relations, board management
- Chief Financial Officer and Company Secretary Statutory and management reporting, financial planning, annual budgets, taxation, treasury, accounts payable, accounts receivable, payroll, regulatory accounting, accounting policies, company secretary
- IT Manager Strategic IT management and planning, IT contractor management, desktop management, help desk
- Legal Counsel Legal services, easements, contract management
- Chief Operating Officer Distribution asset planning, control room operations, asset management, maintenance planning, engineering, capital construction, field maintenance activities, contactor management, meter reading, call centre, meter data services, fault room management
- Regulatory Manager Regulatory compliance, pricing submissions, regulatory policy, performance reporting

UED also has a Chairman and Board of Directors comprising representatives from its major shareholders.

UED's organisation structure as at 1 December 2010 is provided below:.

Jemena Asset Management (6) Pty Ltd (JAM6) provide the bulk of the operating, maintenance and construction services to UED. JAM6 are 100% owned by SPIAA. in accordance with an Operating Service Agreement (OSA.)

UEDH ownership structure is the same as UED. UEDH provides strategic management and treasury services to UED. These services are provided by the shareholders and are for regulated services. UEDH charges these services at cost to UED.

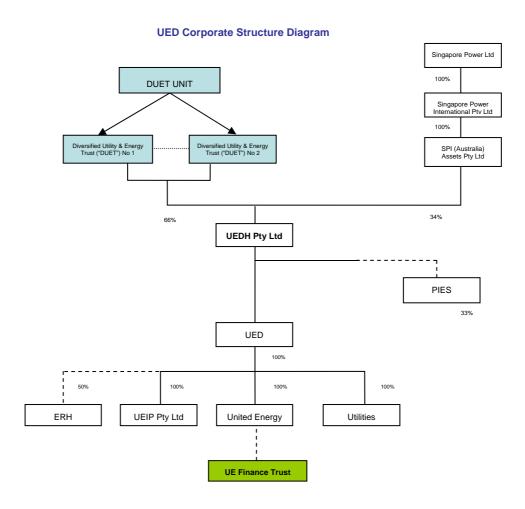

UEDH is a holding company that sits above UED and the other companies in the UE group and was established to be the focal point for the management of UED's electricity distribution business and the UE group. For example, the Board operates from the UEDH level. UEDH's responsibilities include but are not limited to:

- General management and corporate governance;
- Financial management, accounting and reporting;
- Corporate strategy and planning;
- Corporate relations and stakeholder management
- Risk and quality management
- Treasury management
- Regulatory management
- Overseeing customer and back-office management
- Overseeing operations, network planning and investment decision making;
- Insurance management; and
- Contract management, including the operations contract between UED and JAM6

UED fulfils these responsibilities through resources directly employed by it, through resources contracted by it (including PIES and AMP Capital Investors) and through support provided by it's shareholders: DUET and SPIAA

All related party transactions are disclosed in UED's audited statutory and regulatory accounts.

UED is a stand-alone distributor and does not retail electricity, nor provide construction or maintenance services to any other business. UED has a contract with a third party (JAM6) for the construction, maintenance and operation of its distribution network.

### 6 Categories of distribution services

Distribution services provided by UED must be classified as either:

- a direct control service; or
- a negotiated distribution service

Direct control services are further divided into:

- standard control services; and
- alternative control services.
  - 1. Direct Control Services Standard Control Services

Services provided as Standard Control Services are recovered via Distribution Use of System tariffs and make up the bulk of services provided by UED. These services are ultimately provided to all end-use customers connected to UED's electricity distribution network. Services include the maintenance and operation of UED's distribution system including vegetation management, fault restoration, asset inspection, planned maintenance, reactive maintenance, emergency management, and the 24 hour control room. Capital expenditure is incurred to provide Standard Control services including ensuring capacity requirements are met, replacement capital, asset refurbishment, new connections services (in accordance with Guideline 14) and network growth

#### 2. Direct Control Services - Alternative Control Service

Alternative Control Services are recovered via specific prices to those customers that have requested the service. Alternative Control Services are not recovered via Distribution Use of System tariffs. These services include; public lighting maintenance and replacement, energisation of new connections, temporary supplies, service truck visits, elective undergrounding, low voltage covers – most of the services previously referred to as excluded services are now referred to as Alternative Control Services.

#### 3. Negotiated Services

Services provided as Negotiated Services are recovered via specific prices to those customers that have requested the service. Negotiated Services are not recovered via Distribution Use of System tariffs. Negotiated services include relocation and alteration of public lighting assets and new public lighting.

### 4. Non-regulated Services

UED does not provide any non-regulated services.

5. AMI services - Cost Recovery Order in Council

Metering services that are recovered under a specific Victorian Order in Council (AMI OIC). The activities for which costs are recovered pursuant to the AMI OIC are set out in schedule 2 section 2.1 of that document.

UED will amend this Section of the CAM in accordance with clause 4.2(a) of the cost allocation guidelines so as to apply the AER's final classification of services.

### 7 Detailed principles and policies for cost attribution

Overview of systems and costing principles

UED utilises SAP as its financial management and works management system. UED's SAP system is fundamentally structured that it complies with statutory reporting requirements utilising various job ledgers in order to prepare management reports. It will also be structured so that it complies with this CAM.

Each expense (capital and non-capital) must be coded with a general ledger account code and a cost centre code. Some expenses will also be allocated to a job ledger code in order to collect costs in more detail. The broad grouping of general ledger account codes are as follows:

- Labour;
- Materials;
- External services:
- Contracts;
- Direct overheads;
- Transport & logistics; and
- Miscellaneous

For more detailed reporting, costs are then coded to a job ledger code. Each job ledger code is assigned to an activity code (activity codes will summarise multiple job ledger codes). This allows UED to group individual jobs by like activities which in turn allows UED to prepare management and regulatory reports.

Typically cost centres will be used for corporate, overhead type services and those services that provide one service only e.g. finance, network management, control room or regulatory costs. Job ledger codes are created for more detailed reporting for capital and maintenance type activities.

### Directly allocated costs

Each cost centre and activity code (job number summary) has costs directly attributed to it. These are the general ledger account codes described above. The manner in which general ledger account code costs are attributed to either cost centre or activities is described below:

#### Labour

Labour related costs include salaries paid to employees, superannuation, payroll oncosts such as work care levy, payroll tax and other allowances. Labour costs are directly attributed to cost centres. Individual cost centres are able to have any number of people attributed to them, based on the type of work performed by the individual and who they report to in the organisation structure.

Labour may be job costed to individual projects as required. In the case that labour is job costed each cost centre has its own specific average rate that is costed to individual projects based on the hours worked and recorded via manual time sheet process. The average rate is designed to recover total labour costs described above plus an additional allowance for leave and other specific job related tools such as mobile phones, tools etc. Labour recovery does not include recovery of general overheads such as supervision, accommodation, IT related costs etc.

The net labour amount attributed to cost centres are allocated to various relevant headings based on the rule for the individual cost centre.

External labour will be directly charged to cost centre or job ledger codes. These costs will then be allocated based on the rule set up for the cost centre or job ledger code.

#### Materials

UED does not currently have a central stock system for day to day stock requirements but does hold stock for strategic spares. Materials supplied for capital construction and maintenance activities are provided by the service provider performing the works in almost all cases.

Strategic spares are held by UED for stock that has a long lead time or for equipment that can no longer be purchased. In these cases spares are attributed directly to the job as required at book value.

As from 1 July 2011 UED plans to have a stock system and issue materials directly to external service providers as required. Materials will be allocated directly to job numbers at cost plus a surcharge to recover the cost of managing the logistics function. This will include:

- the cost of purchasing;
- warehousing costs;
- premise costs; and
- delivery costs

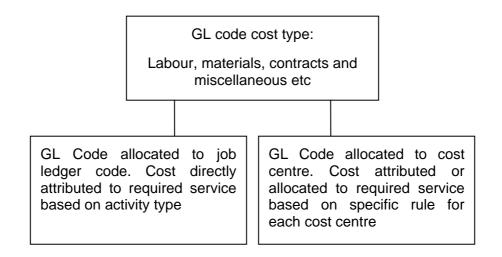

Jobs will attract a flat rate surcharge rate for each six monthly period designed to recover the cost of handling materials. This rate comprises of costs associated with the storage of strategic spare parts for the network. The surcharge rate applied to jobs is the total forecast costs associated with the storage of strategic spares divided by the forecast expenditure of related jobs. This reflects the average cost of storing strategic spares based on the cost of the job. The rate will vary depending on actual costs incurred and inventory turn-over. Twice per annum any under or over recovery of actual costs compared to the surcharge recovery will be reconciled. The rate will be adjusted to reflect the actual cost of the provision of inventory costs, subject to materiality.

#### All other services

Services provided by external parties or for other goods and services are all directly attributed to either a cost centre or specific job number. This includes the payment of service providers for capital construction and maintenance, payment for licence fees, and payment for audit and other professional services.

#### **Attribution Process**

Costs are allocated to the required distribution services as described in the diagram below. In summary all costs will be coded to a general ledger costs. All costs are also coded to either a cost centre or a job ledger code. Cost centres will attribute their costs to a distribution service based on the allocation rules provided for in section 8 table titled "allocated costs" and job ledger codes are allocated based on the rules in section 8 tables titled "capital activities" and "maintenance activities."

### 8 Directly attributed costs

The table below contains the detailed activity codes for which the costs are directly attributed to a category of distribution services.

### Capital Activities

Internal category	Service	Comments	Consistency with current approach
Customer Initiated			
Customer Business Supply	SC	Allocated to standard control in accordance with Guideline No. 14	Yes
Metering	CROIC	Unclassified AMI Cost Recovery Order in Council	Yes
Dual & Multiple Occupancy	SC	Allocated to standard control in accordance with Guideline No. 14	Yes
Co-Generation & Renewable Energy Projects	SC	Allocated to standard control in accordance with Guideline No. 14	Yes
Medium Density Housing	SC	Allocated to standard control in accordance with Guideline No. 14	Yes
Public Lighting – includes public lighting at the request of customers including the replacement of existing lighting with new energy efficient lighting	NS	Charged directly to developers as a negotiated service	Yes
Minor Capital Lights	NS	Charged directly to developers as a negotiated service	Yes
Special Capital Works/Recoverable Works	SC	Allocated to standard control in accordance with Guideline No. 14	Yes

Internal category	Service	Comments	Consistency with current approach
Customer Initiated			
Low Density/Small Business Supply (<10kVA)	SC	Allocated to standard control in accordance with Guideline No. 14	Yes
Replacement			
Sub/T Comms & Protect Sys Replacement	SC	Directly allocated	Yes
Network High Voltage Installation Replacement	SC	Directly allocated	Yes
Public Lighting Replacement – only includes a like for like replacement. Where existing lighting is replaced with new energy efficient lighting this is costed and funded by customer initiated capital	AC	Directly allocated	Yes
Service Replacements	SC	Directly allocated	Yes
Network Overhead Line Replacement	SC	Directly allocated	Yes
Network Pole Replacement	SC	Directly allocated	Yes
Pole Reinforcement	SC	Directly allocated	Yes
Sub/T Installation Replacement	SC	Directly allocated	Yes
Network Underground Cable Replacement	SC	Directly allocated	Yes
Pole Top Replacement	SC	Directly allocated	Yes
Other	SC	Directly allocated	Yes
Demand			
Distribution System Augmentation	SC	Directly allocated	Yes

Internal category	Service	Comments	Consistency with current approach
Customer Initiated			
Sub/T Overhead Line Augmentation	SC	Directly allocated	Yes
Distribution System Augmentation	SC	Directly allocated	Yes
Zone Substation Augmentation	SC	Directly allocated	Yes
Performance			
Distribution System Performance	SC	Directly allocated	Yes
Environmental Management	SC	Directly allocated	Yes
Network Fire Mitigation Capital	SC	Directly allocated	Yes
Quality or Supply	SC	Directly allocated	Yes
Remote Monitoring & Control Schemes	SC	Directly allocated	Yes
Sub/T System Performance	SC	Directly allocated	Yes
Other Capital			
Information Technology	SC and CROIC	Directly allocated and Unclassified AMI Cost Recovery Order in Council	Yes
Vehicles	SC and AC	Allocated based on weighted revenue average	Yes
Property	SC and AC	Directly allocated	Yes

Maintenance Activities

Internal category	Service	Comments	Consistency with current approach
Fixed Charges	NS & AC	Directly allocated	Yes
Distribution Faults	SC	Directly allocated	Yes
TVI's	SC	Directly allocated	Yes
Voltage complaints	SC	Directly allocated	Yes
Pole inspection and treatment	SC	Directly allocated	Yes
Overhead asset inspection	SC	Directly allocated	Yes
Vegetation Control	SC	Directly allocated	Yes
Environmental maintenance	SC	Directly allocated	Yes
Pole top & oh line maintenance	SC	Directly allocated	Yes
Distribution SG maintenance	SC	Directly allocated	Yes
Distribution HV installation maintenance	SC	Directly allocated	Yes
Meters & time-switch maintenance	CROIC	Unclassified AMI Cost Recovery Order in Council	Yes
UG cable maintenance	SC	Directly allocated	Yes
Claims	SC	Directly allocated	Yes
Routine maintenance	SC	Directly allocated	Yes
Condition based maintenance	SC	Directly allocated	Yes
Meter reading	CROIC	Directly allocated	Yes
Special meter reading	AC	Directly allocated	Yes

SC = Standard control

AC = Alternative Control

CROIC = Victorian Cost Recovery Order in Council

NS = Negotiated Services

### Allocated costs

Those costs that are not specifically job-costed are charged to cost centres. These costs generally relate to corporate or support activities and are charged directly to specific cost centres. Cost centre costs are then allocated between standard control services, alternative control services, CROIC, or negotiated services based on the table below. Services provided by PIES are included as per the activity they provide. E.g. UED's CEO is part of the PIES group and the CEO costs charged from PIES to UED will be allocated based on the table below. The charge from PIES to UED will be in accordance with this.

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
CEO					
CEO & EA (**)	NC	The office of the Chief Executive Officer	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Strategic Planning (**)	NC	Annual strategic planning process	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Stakeholder relations	С	Communications and stakeholder management with major stakeholders	Standard control Alternative control Negotiated services	Directly allocated – this function has specific tasks and will be costed to the specific service	No – refer allocation approach in section 3
Human resources	С	Management of recruitment and HR policy	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
UEDH	С	United Energy Distribution Holdings provides treasury services and management, strategic services, UED	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
		board costs. This category also includes Pacific Indian Energy Services – provides services to UEDH and Multinet. Fee determined based on asset value.			
CFO					
CFO (**)	NC	The office of the Chief Finance Officer	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Annual planning (**)	NC	Annual planning and budgeting process	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Statutory reporting (**)	NC	Half yearly and annual statutory reporting process.	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Management reporting	NC	Monthly management reporting	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Tax	NC	Preparation of tax returns and	Standard control	Allocated based on	No – refer allocation

		tax compliance	Alternative control Negotiated services	weighted revenue average	approach in section 3
Payroll	NC	Management of payroll system to ensure payment of salaries	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Accounts payable	NC	Payment of external service suppliers of goods and services	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Audit services	NC	Independent review of systems, process, regulatory obligations and financial reporting	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Purchasing	NC	Raising purchase orders for external providers of goods and services.	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Insurance & risk	С	Insurance costs including management of function	Standard control Alternative control CROIC	Insurance costs that relate solely to standard control services will be allocated directly to standard	Yes

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
				control services (e.g. bushfire liability). Other insurance items that cover liabilities across various categories will be allocated via weighted average revenue.	
Chief Operating Officer (**)					
Asset Management	С	Planning for demand and replacement activities.	Standard control	Directly allocated – this function relates solely to the planning of the network and standard control services.	Yes
Maintenance planning	С	Development and review of maintenance asset strategies	Standard control	Directly allocated – this function relates solely to the planning of the network and standard control	Yes

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
				services	
Control room	С	24 hour control room managing electricity load	Standard control	Directly allocated – this function relates solely to the planning of the network and standard control services	Yes
Despatch	С	Despatching crews and service providers to fault calls and other network activities	Standard control	Directly allocated – this function relates solely to the planning of the network and standard control services	Yes
Call Centre	С	Call centre for faults and other enquiries	Standard control Alternative control	Based on call volumes	No – refer allocation approach in section 3
Property	NC	Property management, rates, land tax, and other outgoings	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
OHS	С	Health and safety management	Standard control	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Customer	С	Customer enquiries and	Standard control	Directly allocated –	No – refer allocation

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
service		ombudsman investigations	Alternative control	required predominatel y for standard control services	approach in section 3
Billing and Revenue collection	NC	Revenue collection and billing function.	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
GSL payments	С	Payment of guaranteed service levels for relevant services	Standard control Alternative control	Directly allocated	Yes
Meter data services	С	Metering services allocated to	CROIC	Unclassified AMI Cost Recovery Order in Council	Yes
Jemena OSA contract					
OSA - capital	С	Payment to Jemena under the OSA for individual capital projects	Standard control Alternative control Negotiated services CROIC	Directly attributed based on the activity described in table above	Yes
OSA - operating & maintenance fee	С	Payment to Jemena for services provided	Standard control Alternative control Negotiated services CROIC	Allocated based on 2002 results up until June 30 2011	Yes
Regulation					

Cost	C/N C	Description	Services	Basis of allocation	Consistency with current approach
Regulatory Manager (**)	NC	Management of regulatory function	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Regulation (**)	NC	Regulatory compliance, market operations, etc	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – previously allocated directly to standard control
Information technology					
IT Manager (**)	NC	Management of IT services	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No –previously allocated to standard control
Information Technology	NC	Provision of maintenance and support of IT systems and services.	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No – refer allocation approach in section 3
Legal Counsel					
-Legal Services (**)	NC	Legal counsel and compliance with relevant law.	Standard control Alternative control Negotiated services	Allocated based on weighted revenue average	No –previously allocated to standard control

C = Causal

NC = Non-Causal

(\*) The current reporting arrangements in place for the Jemena fixed operating fee paid under the OSA is based on the 2002 allocation of costs. 2002 was the last full year of operation prior to the OSA and therefore has been used as a basis for allocating costs. This allocation is explained in the 2002 regulatory accounting statements as required by Guideline No. 3. This allocation methodology will cease June 30 2011.

### (\*\*) Services currently provided by PIES

An example of the weighted revenue average is contained in the table below. The weightings are based on the 2008 regulatory accounts. This table will be updated annually based on forecast budget data.

Weighted Revenue Table: Based on 2008 Regulatory Account Information. The weightings in this table will be applied to those costs centres costs not directly allocated to job codes.

Allocator	Standard Control	Alternative Control	Negotiated Services	Total
Revenue Exc	412,074	13,534	2,010	427,618
CROIC	96%	3%	1%	100%

Note: Costs are not allocated to CROIC based on an allocation rule. All costs charged to CROIC are directly charged via invoices or timesheets.

This table will be updated annually based on prior year results.

### Balance Sheet Allocation

All property plant & equipment (i.e. capital expenditure) is directly allocated.

A summary of allocators applied to other parts of the Balance Sheet is contained in the table below:

Item	Method	Service	Basis of allocation	
Receivables – Use of System charges	Causal	Standard control	Relate to standard control services only.	Yes
Receivables – non use of system charges	Causal	Alternative control Negotiated distribution CROIC	Allocated on basis of revenue.	Yes
Inventory	Causal	Standard control	Directly allocated.	Yes
Prepayments	Causal	Standard control Alternative control Negotiated services CROIC	Prepayments are allocated based on the nature of the prepaid expense. For example, prepaid insurance premiums are allocated on the basis of insurance premiums, regulatory licence fees are allocated to distribution services.	Yes
Creditors	Causal	Standard control Alternative control Negotiated services CROIC	Creditors and accruals are allocated on the basis of total operating and capital expenditure.	Yes
Leave Provisions	Causal	Standard control Alternative control	Annual and long service leave provisions are allocated between	Yes

Item	Method	Service	Basis of allocation	
		Negotiated services	the relevant headings based on revenue	

### 9 Compliance monitoring

The Chief Financial Officer is responsible for monitoring UED's compliance with the CAM and the CAG. UED has a risk and audit committee whereby compliance is monitored on a quarterly basis. Compliance with the CAM will be included as part of that reporting and management process.

The Chief Finance Officer's accountabilities for this responsibilities are described in section 5.

External auditors will be required to provide the necessary representation that this CAM has been complied with when preparing Regulatory Accounts and any Regulatory Pricing Proposal.

The cost allocation methodologies described in this CAM will be provided to all related parties – specifically PIES, UEDH and Jemena Asset Management (JAM) (noting that for JAM) they will only apply as from 1 July 2011, in accordance with new contractual arrangements). Major contractors and related parties will also be provided a copy of the approved CAM, however noting that the price paid by UED for individual services will be based on the contractor cost structure and cost allocations. Contractors and related parties will be required to comply with this CAM to the extent the law requires them to comply.

Contractors and related parties will provide sufficient detail to enable UED to cost services directly to specific job ledgers in accordance with this CAM.

This CAM complies with the existing ESCV ring fencing guidelines. This CAM will be amended (if required) when the AER replaces the existing ring-fencing guidelines.

An item is material if its omission, misstatement or non-disclosure has the potential to prejudice the understanding of the financial position of UED, gained by an assessment of financial information relating to UED.

UED does not apply an avoided cost allocation.

All gueries regarding this CAM can be directed to:

Andrew Schille
Regulatory Manager – United Energy
aschille@ue.com.au
(03) 8540 7818

### **10 Records Maintenance**

In order to demonstrate the attribution of costs to, or allocating costs between, different categories of distribution services in accordance with this CAM to the AER under clause 5.2 of the CAG and to allow that attribution or allocation to be audited or otherwise verified by a third party, including the AER, as required, UED will maintain records of that attribution or allocation as follows:

- All financial records will be kept in UED's financial systems (SAP)
- UED's Statutory accounts will form the basis of all reporting requirements
- All records will be kept for at least seven years
- All records will be made available to external auditors and the AER
- Any changes to this CAM will be supported by working papers and signed off by UED management prior to being submitted for AER approval
- Any changes to this CAM will be approved prior by the AER

### 11 Date of effect

The date of effect for this CAM is 1 January 2011.

# Appendix G: Explanation of material differences

**UNITED ENERGY** 

### 1. Revenue and expenditure

This section addresses Sections 1.4 to 1.5 of Schedule 1 of the Annual RIN.

Table 1: Revenue

	Actual (\$m)	Benchmark (\$m)	Difference (\$m)	Percentage difference	Reason for material difference
Standard Control	401	403	-2	-0.4%	Not applicable

### Table 2: Energy sales

	Actual	Benchmark	Difference	Percentage difference	Reason for material difference
Energy Volume	7,604	7,836	-232	-3.0%	Not applicable

### **Table 3: Operating and maintenance**

	Actual (\$m)	Benchmark (\$m)	Difference (\$m)	Percentage difference	Reason for material difference
Standard Control	118	128	-10	-8.2%	Not applicable

### **Table 4: Capital expenditure**

	Actual (\$m)	Benchmark (\$m)	Difference (\$m)	Percentage difference	Reason for material difference
Standard Control	219	184	36	19.3%	Refer to Table 5 below

### Table 5: Capital expenditure – Reasons for material difference

	Actual (\$m)	Benchmark (\$m)	Difference (\$m)	Percentage difference	Reason for material difference
Reinforcement	18.2	49.5	-31.3	-63%	Local maximum demand growth being lower than expected, which resulted in an economic deferral of capital. Planned projects being abandoned due to a lower cost alternative project being identified and delivered. A change in business focus in response to deteriorating SAIDI that prioritised asset replacement and performance expenditure over Augmentation.

# Appendix G: Explanation of material differences

**UNITED ENERGY** 

	Actual (\$m)	Benchmark (\$m)	Difference (\$m)	Percentage difference	Reason for material difference
New customer connection	65.0	53.4	11.7	22%	Higher number of connections. Unit costs increase from more complex works and higher number of customer projects requiring upstream augmentation works
Reliability & quality maintained	41.2	25.3	15.9	63%	Overspend for year was predominantly driven by increasing replacement of assets at their end of life (as can be seen in the network performance data with asset failure the leading cause of outages in recent history) to address reliability problems which have seen us consistently miss regulatory targets for the prior 3 years.
Environmental, safety & legal	70.2	45.5	24.7	54%	Catch up for underspend in previous years.
SCADA/Network control	0.0	0.0	0.0	0%	Immaterial
Non network general - IT	23.1	8.2	14.9	183%	Brought forward IT projects
Non network general - other	1.6	2.0	-0.4	-21%	Miscellaneous Deferrals
Standard Control - Total Additions	219	184	35.5	19%

## 1 Introduction

During the 2015 calendar year, United Energy (UE) continued two projects under the Demand Management Incentive Scheme (DMIS). These were:

- · Virtual Power Plant (VPP) Project; and
- Summer Saver (Demand Response) Trial.

This report and its attachments deliver the annual reporting requirements of the DMIS for work undertaken on these projects during 2015 and documents the outcomes and learnings of each project. Further details of each project are presented below.

# 1.1 Virtual Power Plant (VPP) Project

In September 2013 UE submitted a request to the AER to seek indicative up-front approval to use part of the 2011-2015 allocation of Demand Management Incentive Scheme (DMIS) funding (part A) to support the development of UE's Virtual Power Plant (VPP) 50kW Residential Pilot Project.

With the price of solar photovoltaic (PV) falling dramatically and the price of battery storage forecast to decrease sharply in future years, UE was eager to explore the use of PV and battery storage technology for addressing immediate capacity shortfalls and deferring traditional network augmentation solutions on the UE network. By utilising the energy stored in batteries, VPP technology can be used by UE to shave peak load and defer augmentation projects in regions of the network where the future peak demand growth is uncertain or where peak demand is forecast to decline (potentially leading to under-utilised network assets). VPP can also be used to add capacity in regions of the network where the cost of adding capacity through traditional solutions is higher than average.

The aim of the project is to validate or otherwise, the use of a VPP to manage embedded generation and storage in a residential setting for the provision of efficient and prudent non-network augmentation.

The VPP integrates the operation of both supply and demand-side assets to meet customer demand for energy services in both the short and long-term. To match short-interval load fluctuations, the VPP is intended to make extensive and sophisticated use of information technology, advanced metering, automated control capabilities, and electricity storage.

In 2014 there was significant work completed as part of the stage 1 pilot. UE successfully installed a total of thirteen VPP units distributed across our network. The installations were completed in July 2014, and significant testing, refinement and learnings have been established through the operations of these units in 2015.

UE identified new manufacturers that had entered the Australian market whose battery technology could be controlled by UE to operate as a VPP asset. To keep at the forefront with the latest advances in battery technology, UE commenced a pilot project to assess the technical and operational suitability of the Tesla Powerwall hardware. UE has set up the Burwood field depot to replicate a standard residential solar and battery installation and installed 2x Tesla Solar Storage systems with different control architectures in a test environment. UE intends to use the Burwood Tesla pilot to firstly validate that the Tesla batteries can be controlled as required by UE to operate as a network asset and secondly to identify the most technically suitable and least cost architecture for the use of the Tesla batteries within residential customers' premises. Field testing of the Tesla batteries over the 2015/16 summer period will identify any issues/risks and will allow UE to put in place appropriate controls before the batteries are considered for installation within customers premises.

Ongoing operations and lessons learned across each of the phases will be used going forward on the continuing VPP demand management projects.

Refer to Appendix 1 for further details on this project.

# 1.2 Summer Saver (Demand Response) Trial

Demand response seeks to incentivise the end customer to reduce their demand on a small number of peak demand days through a variety of mechanisms. These mechanisms include voluntary load reduction, utility load control, supply capacity limiting and dynamic peak pricing. Sustained reliable demand response from residential and commercial/industrial customers has been proven to be effective and efficient at managing peak demand can be used to defer network augmentation.

The Summer Saver Trial<sup>1</sup> is an investigation of how effective and efficient customer demand response is as a non-network alternative at addressing demand at peak times. The trial investigates demand management options. The outcomes of this trial will enable UE to develop a demand management model that describes the best combination of mechanisms that will result in the biggest peak demand reduction at specific locations based on customer demographics and load profiles.

UE launched the trial in February 2014 targeting 6,500 customers on four Bulleen zone substation feeders. Customers were offered \$25 if they reduced their load during the UE nominated three hour event period. UE anticipated calling on average four events per summer with the customer having the opportunity to earn \$100 for the summer if they participated in all events.

UE expanded the trial for summer 2014/15 to include 4,000 more customers in areas of the network that are likely to experience an interruption from electrical asset overload. Also, the trial introduced new demand management options to existing trial members: direct load control of pool pumps and supply capacity limiting.

The trial was expanded again this summer (2015/16) to include a total of 13,000 customers in areas of the network that are likely to experience an interruption from electrical asset overload. On top of the pool pump load control and supply capacity limiting options, the new option of load control of air-conditioners was added to this summer's service offerings.

The trial aimed to engage more closely with customers and help customers understand their electricity usage better while participating in demand response events. To this end customers were offered the Smart Energy app that provided individual usage information to customers. Selected customers offered an Energy Monitor device that provided more in depth and real-time energy data including appliance disaggregation information on electricity bills.

The majority of the costs incurred by the trial this year have been on technology to support the Smart Energy app and the registration website. Other costs include marketing, participation incentives and load control technology.

Refer to Appendix 2 for further details on this project.

# 2 Regulatory Requirement and Compliance

The AER, in its Demand Management Incentive Scheme applied to UE for the 2011-2015 regulatory period, sets certain criteria and reporting requirements for expenditure from the DMIA. These are detailed below along with a description of how UE complies with each of these requirements for each project.

# 2.1 VPP Project

"1. Demand management projects or programs are measures undertaken by a DNSP to meet customer demand by shifting or reducing demand for standard control services through non-network alternatives, or the management of demand in some other way, rather than increasing supply through network augmentation."

<sup>&</sup>lt;sup>1</sup> http://uemg.com.au/customers/your-electricity/summer-saver-trial.aspx

The VPP project attempts to combine the capabilities of solar PV generation and battery storage to flatten out the demand profile by charging the battery overnight from the network or from PV during the middle of the day when solar PV generation is at its maximum and discharging the battery during the early evening when residential demand is at its maximum. Aggregating VPP units will provide a system that can be dispatched to manage network capacity constraints.

- "2. Demand management projects or programs may be:
- (a) broad-based demand management projects or programs—which aim to reduce demand for standard control services across a DNSP's network, rather than at a specific point on the network. These may be projects targeted at particular network users, such as residential or commercial customers, and may include energy efficiency programs and/or
- (b) peak demand management projects or programs—which aim to address specific network constraints by reducing demand on the network at the location and time of the constraint."

The VPP aims to address specific network constraints by reducing demand on the network at the location and time of the constraint. If the VPP concept is proven, it is intended to locate such units in areas where there are identified network constraints. In the first instance, this is likely to be in areas where there are significant distribution transformer constraints by clustering the VPP units in localised areas. Ultimately the goal is to alleviate constraints higher up in the network such as at the distribution feeder or zone substation level.

"3. Demand management projects or programs may be innovative, designed to build demand management capability and capacity and explore potentially efficient demand management mechanisms, including but not limited to new or original concepts."

The VPP offers a new solution for a constrained network area, particularly where load growth is low, uncertain or is expected to plateau in future. The ability to provide incremental amounts of capacity through combining renewable generation and storage to meet the demand as it materialises could be economic against a more traditional network solution that provides significant step increases in capacity at higher cost. The VPP is intended to test this concept.

"4. Recoverable projects and programs may be tariff or non-tariff based."

The VPP project is non-tariff based.

- "5. Costs recovered under the DMIS:
- (a) must not be recoverable under any other jurisdictional incentive scheme
- (b) must not be recoverable under any other Commonwealth or State/Territory Government scheme and
- (c) must not be included in forecast capital or operating expenditure approved in the distribution determination for the regulatory control period under which the DMIS applies, or under any other incentive scheme in that determination."

Costs recovered under the DMIS for the VPP project are costs incurred by UE in procuring expert consulting services, equipment and installation services for the trial. These costs have not been recovered from any other scheme. The costs do not include labour for UE employees' time toward this project. This cost is absorbed by the organisation and is regarded as in-kind contribution towards the project.

"6. Expenditure under the DMIA can be in the nature of capital or operating expenditure. The AER considers that capex payments made under the DMIA could be treated as capital contributions under clause 6.21.1 of the NER and therefore not rolled into the regulatory asset base (RAB) at the start of the next regulatory control period. However the AER's decision in that regard will only be made as part of the next distribution determination."

All costs incurred by UE under the DMIS for the VPP project are classified as operating expenditure.

#### 2.2 Summer Saver Trial

"1. Demand management projects or programs are measures undertaken by a DNSP to meet customer demand by shifting or reducing demand for standard control services through non-network alternatives, or the management of demand in some other way, rather than increasing supply through network augmentation."

The Summer Saver Trial seeks to incentivise customers to reduce their load during peak times. Voluntary trial customers are rewarded \$25 per event for reducing their load during the UE nominated three hour event period. Customers on the pool pump load control program were incentivised \$40 per event for load reduction and Supply Capacity Limiting customers were incentivised \$50 per event for load reduction.

5 event days were called in February and March 2015 although not on very hot days due to the mild summer weather. Event results are summarised in Appendix 2.

- "2. Demand management projects or programs may be:
- (a) broad-based demand management projects or programs—which aim to reduce demand for standard control services across a DNSP's network, rather than at a specific point on the network. These may be projects targeted at particular network users, such as residential or commercial customers, and may include energy efficiency programs and/or
- (b) peak demand management projects or programs—which aim to address specific network constraints by reducing demand on the network at the location and time of the constraint."

The Summer Saver Trial seeks to address specific network constraints and is therefore targeted at customers directly impacted by those constraints. The trial targeted approximately 6,000 customers on four Bulleen feeders that were close to capacity as well as about 4,000 customers in areas of the network which are likely to suffer an interruption this summer or had suffered an interruption in previous summers due to electrical plant overload. Through the trial, UE wishes to understand if sufficient numbers of customers participate in the trial with the right level of behaviour to reduce sufficient load to prevent an interruption.

"3. Demand management projects or programs may be innovative, designed to build demand management capability and capacity and explore potentially efficient demand management mechanisms, including but not limited to new or original concepts."

Residential demand management as a concept is not new however trialling it in metropolitan Melbourne certainly is. Other DNSPs in Australia and internationally have found success with demand management in regional areas where communities display more social capital. Since UE's network is predominantly metropolitan, demand management such as demonstrated by this trial is a crucial option to be explored.

"4. Recoverable projects and programs may be tariff or non-tariff based."

The Summer Saver Trial is non-tariff based.

- "5. Costs recovered under the DMIS:
- (a) must not be recoverable under any other jurisdictional incentive scheme
- (b) must not be recoverable under any other Commonwealth or State/Territory Government scheme and
- (c) must not be included in forecast capital or operating expenditure approved in the distribution determination for the regulatory control period under which the DMIS applies, or under any other incentive scheme in that determination."

## DMIS Report - 2015

Costs recovered under the DMIS for the Summer Saver project are costs incurred by UE in marketing the trial, creating a registration website, customer participation incentives, and procuring and installing technology. These costs have not been recovered from any other scheme. The costs do not include labour for UE employees' time toward this project. This cost is absorbed by the organisation and is regarded as in-kind contribution towards the project.

"6. Expenditure under the DMIA can be in the nature of capital or operating expenditure. The AER considers that capex payments made under the DMIA could be treated as capital contributions under clause 6.21.1 of the NER and therefore not rolled into the regulatory asset base (RAB) at the start of the next regulatory control period. However the AER's decision in that regard will only be made as part of the next distribution determination."

All costs incurred by UE under the DMIS for the Summer Saver Trial are classified as operating expenditure.

# 2.3 DMIS Reporting

The information contained in this report and its attachment appendices is suitable for public publication.

The AER requires that a DNSP's annual report must include the following for each project.

## 2.3.1 VPP Project

# 1. The total amount of the DMIA spent in the previous regulatory year, and how this amount has been calculated.

UE had \$363,564 excl. GST of expenses during the 2015 calendar year on activities associated with the DMIA for VPP projects. The costs were associated with engaging external consultants, procurement, installation and maintenance of equipment and ongoing operational expenses associated with the pilot.

These costs can be categorised as follows:

- \$177,880 excl. GST for the VPP Sunverge pilot project including hardware maintenance costs, retention of operational data, ongoing operational expenses associated with the pilot (such as sim cards to enable remote control and continuous live monitoring of the systems by UE etc.) and software maintenance.
- \$99,746 excl. GST for the Burwood Tesla pilot including procurement costs for the solar, batteries and associated hardware, installation costs, audit of the installation by a licenced electrical inspector for compliance to standards, security assessment of the IT infrastructure, technical risk assessment, structural assessment for mounting the batteries and installation of communications infrastructure at the Burwood depot for enabling monitoring and control.
- \$35,000 excl. GST for market research to understand customer demographics and likelihood of customers agreeing to host assets in constrained areas of the UE network.
- \$50,938 excl. GST for project management services.

Accrued costs of \$31,194 are included in the above breakdown.

UE has used the costs to assess the financial feasibility of implementing future VPP projects at scale on constrained distribution substations.

Further costs associated with the VPP pilot project are likely to be incurred by UE in the 2016 calendar year, drawn from the 2016-2020 DMIA allowance.

# 2. An explanation of each demand management project or program for which approval is sought, demonstrating compliance against the DMIA criteria in section 3.1.3 with reference to:

#### (a) the nature and scope of each demand management project or program

A VPP can be defined as a cluster of grid-connected distributed generation and storage plants that are monitored and controlled by an operator for energy trading and grid benefits. When combined, the cluster can then be treated as a single power plant. For UE's VPP project we intend to use solar PV and battery storage technologies which when combined can act to reduce peak electricity demand.

# (b) the aims and expectations of each demand management project or program

The aim of stage 1 of the project is to test the VPP concept and its ability to control peak demand through the dispatch of battery storage optimised against solar PV generation.

Traditional network solutions usually result in sunk capital; the resulting augmented asset cannot be easily recovered and used elsewhere if future demand falls. This project's aim is to validate or otherwise, the use

of a VPP to manage embedded generation and storage in a residential setting for the provision of efficient and prudent network augmentation. The solution will be validated if it:

- Effectively avoids/defers CAPEX/OPEX requirements in a prudent and efficient manner.
- Is the most economic outcome when actual costs and benefits are known.
- Is a technically appropriate solution with appropriate mitigation of any risks.

The objectives of this project are to validate VPP as a suitable approach for managing augmentation on the UE distribution network with no adverse impacts to network reliability and safety. The VPP project aims are:

- To test the current state of the technology and its ability to scale.
- To identify the risks.
- To test and assess the level of control that can be achieved with commercially available devices currently on the market.
- To develop an understanding of the economics of the solution and validate the solution is a viable load management tool by exploring and then testing the business model(s), taking the generation, retail and distribution aspects into consideration.
- To explore and test the contractual and commercial agreements with 3rd parties and Residential Hosts (customers).

# (c) the process by which each project or program was selected, including the business case for the project and consideration of any alternatives

This project proposes VPP as a solution to address peak demand issues in low voltage feeders when augmentation costs using traditional solutions are high. It is anticipated that in the future, distributed generation and storage will have application for the entire network as costs continue to fall.

## (d) how each project or program was/is to be implemented

The overall VPP project has been broken into three key stages to ensure that appropriate governance over costs, risks and benefits and associated gating and review are applied at each stage, with each stage being subject to independent approval. Stage 1 (present stage) consists of a VPP system comprising between eight and fourteen installations at residential sites totalling 50kW. The installation sites have been limited to UE employees and VPP project team members' premises within the UE distribution area to manage identified risks. Stage 1 is being operated over a period of 12 to 15 months to test the economics and commercial models and understand the technology's capabilities, limitations and suitability for larger scale deployment. This stage will provide a full year of energy flow data through seasonal variations.

#### (e) the implementation costs of the project or program and

In September 2013 UE submitted a request to the AER to seek indicative up-front approval to use part of the 2011-2014 allocation of Demand Management Incentive Scheme (DMIS) funding (part A) to support the development of UE's Virtual Power Plant (VPP) 50kW Residential Pilot Project. This was endorsed by the AER on the 2<sup>nd</sup> October 2013. The overall VPP project stage 1 was estimated to cost \$1.75M.

# (f) any identifiable benefits that have arisen from the project or program, including any off peak or peak demand reductions.

We have identified a number of constrained locations around the UE network where deployment of VPP is able to achieve peak demand reductions economically. These sites will be targeted for Stage 2.

- 3. The costs of each demand management project or program:
- (a) are not recoverable under any other jurisdictional incentive scheme,

- (b) are not recoverable under any other state or Commonwealth government scheme, and
- (c) are not included in the forecast capital or operating expenditure approved in the AER's distribution determination for the regulatory control period under which the DMIS applies, or under any other incentive scheme in that determination.
  - Expenditure under the demand management incentive scheme is not eligible for recovery under any other jurisdictional incentive scheme
  - Expenditure under the demand management incentive scheme is not eligible for recovery under any other state or Commonwealth government scheme
  - Expenditure under the demand management incentive scheme has not been approved in the AER's
    distribution determination for the regulatory control period under which the scheme applies, or under
    any other incentive scheme in that determination.
- 4. An overview of developments in relation to projects or programs completed in previous years of the regulatory control period, and of any results to date.

Not applicable.

## 2.3.2 Summer Saver Project

 The total amount of the DMIA spent in the previous regulatory year, and how this amount has been calculated.

UE had \$527,170.34 excl. GST of expenses during the 2015 calendar year on activities associated with the DMIA for the Summer Saver Trial comprising of the following:

- \$527,170.34 excl. GST for costs associated with marketing the summer saver trial, creating a registration website, paying customer participation incentives, procuring and installing technology and conducting market research.
- 2. An explanation of each demand management project or program for which approval is sought, demonstrating compliance against the DMIA criteria in section 3.1.3 with reference to:
- (a) the nature and scope of each demand management project or program

This Summer Saver Trial is an investigation of how effective and efficient customer demand response is as a non-network alternative at addressing demand at peak times.

Different mechanisms of demand response can be utilised to motivate and/or incentivise customers to change their energy usage behaviour and reduce load during peak times. These include:

- Voluntary Demand Side Participation (DSP): incentivises customers to reduce/shift their load during peak times with a single-rate reward paid to those who reduce usage by any amount.
- Direct Load Control: gives the utility more certainty in managing load by allowing the utility to manage appliances (RCAC and/or pool pump) during peak times to a known and predictable maximum.
- Critical Peak Pricing: electricity is priced significantly more during peak times to induce customers to reduce load and save money on their bill.
- Supply Capacity Limiting: sets a limit on the customers supply during peak times. This mechanism
  targets high users by enforcing a reasonable limit on their supply during peak times. Signing up to
  this option is voluntary and it is envisioned that such customers are genuinely keen to save energy
  and be more comparable to their neighbours.
- (b) the aims and expectations of each demand management project or program

The key objectives of this trial are to investigate and assess the benefit provided to the network through:

- · demand management tools:
  - investigate the take-up and impact of the three demand management mechanisms on customer load at peak times
  - incentivise customers to reduce their load during peak times via one or more demand management tool
- Informing and empowering the consumer:
  - provide consumers with the tools and information they need to take an active role in managing their consumption and to reduce energy costs and environmental impact

To this end, the trial intends to:

- investigate the take up of the different demand management mechanisms and their
- attractiveness/value to the customers managing/reducing their load
- attractiveness/value to UE in managing peak load
- investigate the value of the different demand management mechanisms compared with network solutions
- identify risks with the technology in installation and operation
- · develop UE knowledge and capability in leveraging AMI benefits
- develop relationships with UE customers
- explore and test contractual and commercial agreements with 3rd parties (retailers, contractors, suppliers)

The outcomes of this trial will enable UE to develop a demand management model that describes the best combination of mechanisms that will result in the biggest peak demand reduction at specific locations based on customer demographics and load profiles.

This model will then be incorporated into business-as-usual activities to manage peak demand.

# (c) the process by which each project or program was selected, including the business case for the project and consideration of any alternatives

Approximately 85% of UE's network services residential customers. This trial investigates various demand management options that can be employed by residential customers. The results of this trial will help UE define which demand management mechanisms have the biggest customer take-up and participation and yield the biggest load reductions at a given incentive value.

## (d) how each project or program was/is to be implemented

UE undertakes analysis to identify trial areas that are likely to experience an interruption and could benefit from load reduction through demand management. Customers in these areas are sent letters informing them of the trial with a call for action to register via the UE website.

UE accepts registrations from customers within the trial area who have either a mobile phone or email account to receive UE event alerts.

UE sends SMS and/or email alerts to customers:

· 48 hours notification of an event day

- 24 hour notice of the event period
- And a reminder on the morning of the event day.

Following the event, UE analyses customer smart meter data to verify load reduction during the three hour event period. Successful customers are informed via email that they will be rewarded. Rewards are processed and sent following an event.

UE undertakes further analysis of customer data to evaluate individual customer and total load reduction achieved for the event.

## (e) the implementation costs of the project or program and

In 2015 the DMIA costs were spent on marketing activities that included:

- · Letters mailed to customers
- Flyers dropped in letter boxes
- · Advertisements in local newspapers.

Funds were also spent on market research of customers within the trial area to understand the best channels to inform customers of the trial and motivations for signing up (or not) to the trial. Research was conducted on trial members to learn about their experience on the trial and find ways of improving the trial.

A large body of work was undertaken to create an automated registration website for customers that linked to the Smart Energy app as well as procuring and setting up the Smart Energy app.

Funds were spent on testing DRED technology before deploying it on a handful of customers over the summer.

(f) any identifiable benefits that have arisen from the project or program, including any off peak or peak demand reductions.

UE called five event days last summer.

Event data showed that:

- 25% of registered customers participated in all 5 events and 50% participated in 4 or 5 events. This is confirmed by post summer customer research that shows that a significant portion of customers tried to participate but data shows that they did not manage an energy reduction during the event.
- 96% of registered customers participated in at least 1 event. It may be that 100% of customers took actions to participate but those actions did not result in a saving during the event period
- 7 people turned (almost) everything off for all 5 events. Several customers turned (almost) everything off on several events.
- The most number of customers participated on the third event in one week (registrations were static
  in that week).
- 3. The costs of each demand management project or program:
- (a) are not recoverable under any other jurisdictional incentive scheme,
- (b) are not recoverable under any other state or Commonwealth government scheme, and
- (c) are not included in the forecast capital or operating expenditure approved in the AER's distribution determination for the regulatory control period under which the DMIS applies, or under any other incentive scheme in that determination.
  - Expenditure under the demand management incentive scheme is not eligible for recovery under any other jurisdictional incentive scheme

# DMIS Report - 2015

- Expenditure under the demand management incentive scheme is not eligible for recovery under any UNITED ENERGY other state or Commonwealth government scheme
- Expenditure under the demand management incentive scheme has not been approved in the AER's distribution determination for the regulatory control period under which the scheme applies, or under any other incentive scheme in that determination.
- 4. An overview of developments in relation to projects or programs completed in previous years of the regulatory control period, and of any results to date.

Not applicable.

#### STATUTORY DECLARATION

Evidence (Miscellaneous Provisions) Act 1958, VIC

I. Antonio Narvaez.

of Level 3, 6 Nexus Court, Mulgrave

In the State of Victoria

do solemnly and sincerely declare that:-

- 1. Iam an officer, for the purposes of the National Electricity (Victoria) Law (NEL), of United Energy Distribution Pty Ltd (ACN 064 651029) (United Energy), a regulated network service provider for the purposes of section 28D of the NEL. I am authorised by United Energy to make this statutory declaration as part of the response of United Energy to the Regulatory Information Notice dated 18 December 2013 (Notice), as amended by the AER on 6 August 2014 served on United Energy by the Australian Energy Regulator (AER).
- 2. The response of *United Energy* regarding the information required to be provided and to be prepared and maintained as specified by Notice, with the exception of the information specified to be audited under Appendix E to this Notice, is to the best of my information, knowledge and belief, and except where expressly stated otherwise:
  - a) in accordance with the requirements of the Notice; and
  - b) true and accurate.
- 3. Where it is not possible to provide the information required by the Notice *United Energy* has provided an estimate, or an explanation of its inability to provide the required information. Where the information provided is an estimate, *United Energy* has used its best endeavours to generate the most appropriate estimate, and has provided the AER with the basis for this estimate and reasons why it is the most appropriate estimate.

I acknowledge that this declaration is true and correct, and I make it with the understanding and belief that a person who makes a false declaration is liable to the penalties of perjury.

Declared at Mulgrave

This 2 8 day of April 2016

Before me,

Signature of Authorised Witness

Signature of person making this declaration (to be signed in front of an authorized witness)

AUDREY WALDEGRAVE
6 Nexus Court Mulgrave Victoria 3170
An Australian Legal Practitioner
within the meaning of the

Legal Profession Uniform Law (Victoria)

The authorised witness must print or stamp his or her name, address and title under section 107A of the *Evidence* (Miscellaneous Provisions) Act 1958 (as of 1January 2010), (previously *Evidence Act 1958*), (eg. Justice of the Peace, Pharmacist, Police Officer, Court Registrar, Bank Manager, Medical Practitioner, Dentist)

# Appendix J: Audit reports – Annual Financial & Non-Financial information

Note: See attached

Ernst & Young 8 Exhibition Street Melbourne VIC 3000 Australia GPO Box 67 Melbourne VIC 3001 Tel: +61 3 9288 8000 Fax: +61 3 8650 7777 ev.com/au

# Independent auditor's report to the directors of United Energy Distribution Pty Ltd

We have audited the Financial Information within tables 1a, 2, 3a, 3b, 5, 6a, 6b, 8a, 8b, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28 and 29 in the data template entitled "United Energy Annual RIN 2015 - Financial" (the "Financial Information") attached, which has been prepared in accordance with United Energy Distribution Pty Ltd's Basis of Preparation (the "Basis of Preparation") in response to the Annual Regulatory Information Notice ("the Notice") issued by the Australian Energy Regulator on 6 August 2015, for the regulatory year ended 31 December 2015. In accordance with the requirements of the Notice, information presented in the Financial Information before this date range has not been subject to audit.

In addition, we have audited the compliance of the Basis of Preparation as it relates to the Financial Information, with the requirements of the Notice and the Principles and Requirements in Appendix E of the Notice, for the regulatory year ending 31 December 2015.

The Australian Energy Regulator requires the Financial Information and the accompanying Basis of Preparation for the performance of a function conferred on it under Division 4 of Part 3 of the *National Electricity (Victoria) Law*, namely conducting various benchmarking exercises as outlined in the Regulatory Information Notice issued to United Energy Distribution Pty Ltd on 6 August 2014.

# Management's Responsibility for the Data Template and Basis of Preparation

Management is responsible for the preparation and fair presentation of the Financial Information in accordance with the requirements of the Notice and United Energy Distribution Pty Ltd's Basis of Preparation, and for such internal controls as management determines are necessary to enable the preparation of the Financial Information that is free from material misstatement, whether due to fraud or error.

## Auditor's Responsibility

Our responsibility is to express an opinion on the Financial Information based on our audit. We conducted our audit in accordance with Australian Auditing Standards. Those standards require that we comply with relevant ethical requirements relating to audit engagements and plan and perform the audit to obtain reasonable assurance about whether the Financial Information is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Financial Information. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the Financial Information, whether due to fraud or error. In making those risk assessments, we consider internal controls relevant to the entity's preparation of the Financial Information in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal controls.

Our responsibility is also to express a conclusion on compliance, in all material respects, of the Basis of Preparation with the requirements of the Notice that relates to the Financial Information. Our audit has been conducted in accordance with applicable Standards on Assurance Engagements (ASAE 3100 Compliance Engagements). Our procedures have been undertaken to form a conclusion as to whether the Basis of Preparation has complied, in all material respects, with the Notice.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

# Independence

In conducting our audit we have complied with the independence requirements of the Australian professional accounting bodies.

# Opinion

In our opinion, the Financial Information of United Energy Distribution Pty Ltd for the year ended 31 December 2015 has been prepared, in all material respects, in accordance with the requirements of the Notice and United Energy Distribution Pty Ltd's Basis of Preparation. In addition, the Basis of Preparation as it relates to Financial Information has complied, in all material respects, with the requirements of the Notice and the Principles and Requirements in Appendix E of the Notice.

## Basis of Accounting

Without modifying our opinion, we draw attention to the Basis of Preparation which describes the general approach to collecting and preparing information. The Financial Information is prepared to assist United Energy Distribution Pty Ltd to meet the requirements of UED Regulatory Information Notice issued by the Australian Energy Regulator. As a result, the Financial Information may not be suitable for another purpose. Our report is intended solely for United Energy Distribution Pty Ltd and the Australian Energy Regulator and should not be distributed to any other parties.

# Independent auditor's Report to the members of United Energy Distribution Pty Ltd

We have audited the Non-Financial Information within tables 1a, 1b, 1c, 1e, and 1f in the data template entitled "United Energy Annual RIN 2015 - Non-Financial" (the "Non-Financial Information") attached, which has been prepared in accordance with United Energy Distribution Pty Ltd's Basis of Preparation (the "Basis of Preparation") in response to the Annual Regulatory Information Notice ("the Notice") issued by the Australian Energy Regulator on 6 August 2015, for the regulatory year ended 31 December 2015. In accordance with the requirements of the Notice, information presented in the Non-Financial Information before this date range has not been subject to audit.

In addition, we have audited the compliance of the Basis of Preparation as it relates to Non-Financial Information, with the requirements of the Notice and the Principles and Requirements in Appendix E of the Notice, for the regulatory year ending 31 December 2015.

The Australian Energy Regulator requires the Non-Financial Information and the accompanying Basis of Preparation for the performance of a function conferred on it under Division 4 of Part 3 of the *National Electricity (Victoria) Law*, namely conducting various benchmarking exercises as outlined in the Regulatory Information Notice issued to United Energy Distribution Pty Ltd on 6 August 2014.

## Management's Responsibility for the Data Template and Basis of Preparation

Management is responsible for the preparation and fair presentation of the Non-Financial Information in accordance with the requirements of the Notice and United Energy Distribution Pty Ltd's Basis of Preparation, and for such internal controls as management determines are necessary to enable the preparation of the Non-Financial Information that is free from material misstatement, whether due to fraud or error.

#### Auditor's Responsibility

Our responsibility is to express an opinion on the Non-Financial Information based on our audit. We conducted our audit in accordance with Australian Auditing Standards. Those standards require that we comply with relevant ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Non-Financial Information is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Non-Financial Information. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the Non-Financial Information, whether due to fraud or error. In making those risk assessments, the auditor considers internal controls relevant to the entity's preparation of the Non-Financial Information in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal controls.

Our responsibility is also to express a conclusion on compliance, in all material respects, of the Basis of Preparation with the requirements of the Notice that relates to Actual Financial Information. Our audit has been conducted in accordance with applicable Standards on Assurance Engagements (ASAE 3100 Compliance Engagements). Our procedures have been undertaken to form a conclusion as to whether the Basis of Preparation has complied, in all material respects, with the Notice.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

## Independence

In conducting our audit we have met the independence requirements of the Australian professional accounting bodies.

# Opinion

In our opinion, the Non-Financial Information of United Energy Distribution Pty Ltd for the year ended 31 December 2015 presents fairly, in all material respects, in accordance with the requirements of the Notice and United Energy Distribution Pty Ltd's Basis of Preparation. In addition, the Basis of Preparation as it relates to Non-Financial Information has complied, in all material respects, with the requirements of the Notice and the Principles and Requirements in Appendix E of the Notice.

## Basis of Accounting and Restriction on Distribution

Without modifying our opinion, we draw attention to the Basis of Preparation, which describes the general approach to collecting and preparing information. The Non-Financial Information is prepared to assist United Energy Distribution Pty Ltd to meet the requirements of the Notice. As a result, the Non-Financial Information may not be suitable for another purpose. Our report is intended solely for United Energy Distribution Pty Ltd and the Australian Energy Regulator and should not be distributed to any other parties.
