

# **Review of the regulatory treatment of inflation**

Stephen Smith and Sheraan Underwood

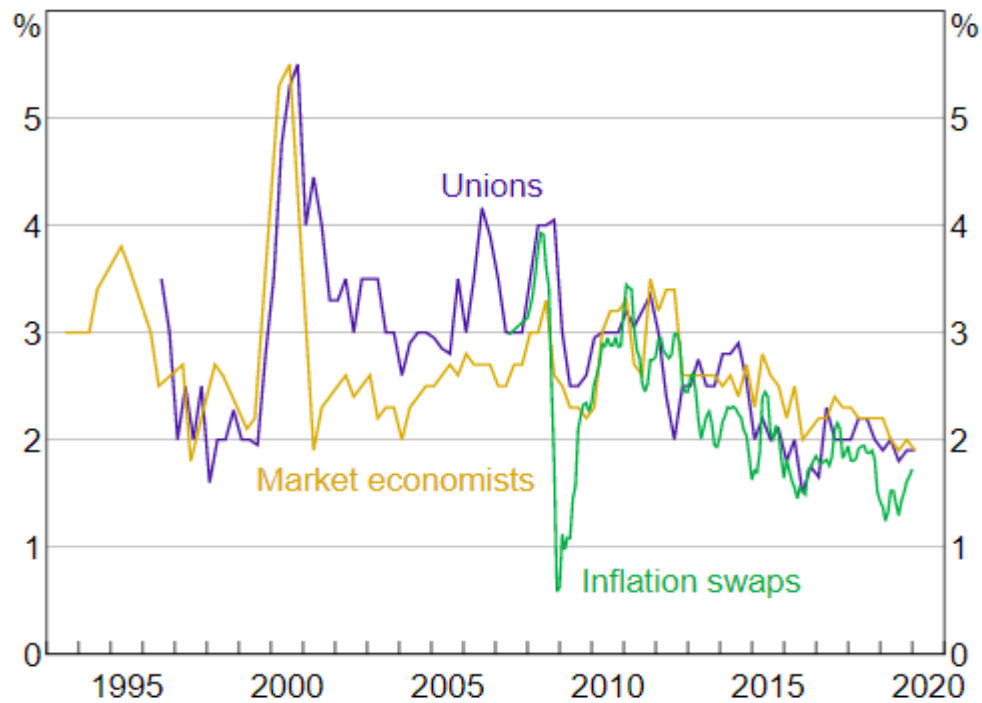

2 July 2020

# Have inflation expectations de-anchored from the RBA target band?

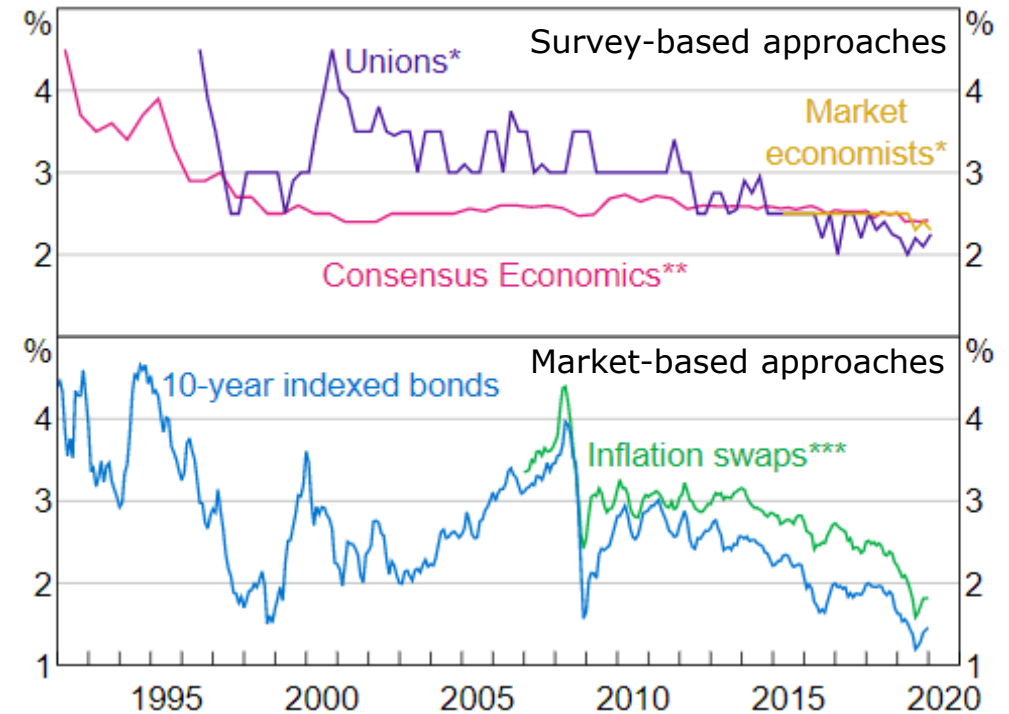

## Recent movements in inflation expectations

*There is some evidence that the weakness in inflation outcomes has started to affect inflation expectations. But the extent of the impact depends heavily on both the approach used to estimate expected inflation (market-based or survey-based) and the time horizon being examined (short term or long term).*

Short term inflation expectations (over the next year)

Long term inflation expectations

\*Average over the next 5-10 years.

\*\*Average over 6-10 years in the future. Consensus Economics forecasts are provided by leading economists whose individual views are aggregated to produce a mean forecast of inflation.

\*\*\*5-10 years forward

# Have inflation expectations de-anchored from the RBA target band?

## Evidence from the academic literature

---

- Recent studies:
  - Moessner and Takáts (2020) – long term inflation expectations remain well-anchored in advanced economies where inflation was near the lower bound of the target range
  - Yetman (2020) – periods of low inflation are correlated with the decreased effects of short term inflation expectations on long term inflation expectations (suggesting that longer term expectations have remained well anchored)
  - Mehrota and Yetman (2018) long term inflation expectations are better anchored than shorter-term forecasts, and inflation expectations diverge from the long term anchor as the forecast period shortens.
- The degree of de-anchoring can differ substantially across countries and regions Buono and Formai (2018) as well as within a country based on the group being analysed (Xu 2019).
- Recent studies using market-based approaches (such as bonds and swaps) find that the risk of less well-anchored inflation expectations rose in the Euro Area, the United States and the United Kingdom in 2014 (Natoli and Sigalotti, 2018). However, these market based approaches may also be capturing the impact of falling risk premia rather than declining expectations (Coeuré 2019).
- Limitations in the literature:
  - There are few studies that examine inflation expectations in 2019 and 2020
  - Most recent studies focus on countries other than Australia and tend to analyse data over several years (which may cloud potential insights into recent changes in inflation expectations).

# Framework for assessing inflation estimation approaches

## Assessment criteria

---

- Measure of inflation:
  - CPI inflation is considered to be the most appropriate measure of inflation for use by the AER due to its widespread use, general acceptance, frequency of release, stability and broad coverage
  - Other measures considered were the GDP deflator, producer price indices and measures of underlying inflation (trimmed mean, weighted mean and CPI excluding volatile items).
- Assessment criteria:
  - **Relative congruence** – refers to how closely the chosen approach aligns with 10-year market expectations of inflation
  - **Robustness** – an approach is considered robust if it does not change significantly in response to events or data that have little or no influence on 10-year market expectations of inflation. An approach is also considered robust if the estimates obtained do not differ when other (appropriate) models or estimation methods are applied
  - **Transparency and replicability** – An approach that is transparent and replicable can be easily verified by stakeholders, improving regulatory certainty for stakeholders and reducing the risk that errors have been made in the calculation of estimates of inflation expectations for regulatory purposes
  - **Simplicity** – A simple approach is likely to produce estimates of expected inflation that require less effort to construct and check (for both the AER and stakeholders). A simpler method may also provide less scope for contentiousness.

# Framework for assessing inflation estimation approaches

## Analysis of inflation estimation approaches

Each of the approaches used to estimate expected inflation have advantages and disadvantages in relation to their use by the AER in its regulatory framework. Deloitte Access Economics finds that two approaches lend themselves to recommendation for use by the AER – the AER approach and a glide path approach.

	<b>Relative congruence</b>	<b>Robustness</b>	<b>Transparency and replicability</b>	<b>Simplicity</b>
<b>AER approach</b>	Good	Excellent	Excellent	Excellent
<b>Glide path</b>	Excellent	Good	Good	Excellent
<b>Bond Breakeven Inflation rate</b>	Good	Fair	Poor	Poor
<b>Swaps</b>	Good	Fair	Good	Fair
<b>Surveys</b>	Excellent	Good	Poor	Fair

Deloitte Access Economics is Australia's pre-eminent economics advisory practice and a member of Deloitte's global economics group. For more information, please visit our website: [www.deloitte.com/au/deloitte-access-economics](http://www.deloitte.com/au/deloitte-access-economics)

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited ("DTTL"), its global network of member firms, and their related entities. DTTL (also referred to as "Deloitte Global") and each of its member firms are legally separate and independent entities. DTTL does not provide services to clients. Please see [www.deloitte.com/about](http://www.deloitte.com/about) to learn more.

#### About Deloitte

Deloitte is a leading global provider of audit and assurance, consulting, financial advisory, risk advisory, tax and related services. Our network of member firms is in more than 150 countries and territories. Learn how Deloitte's approximately 264,000 people make an impact that matters at [www.deloitte.com](http://www.deloitte.com).

#### About Deloitte Australia

In Australia, the member firm is the Australian partnership of Deloitte Touche Tohmatsu and is one of Australia's leading professional services firms. Focused on the creation of value and growth, and known as an employer of choice for innovative human resources programs, we are dedicated to helping our clients and our people excel.
