Response to Powercor Revised Proposal 2021-2026: Request to upgrade Tyrendarra, Strathdownie Cape Bridgewater and Gorae West to three-phase power

The purpose of this letter is to express my support for upgrading single phase power to three phase infrastructures in South West Victoria.

I am a farmer in the South East of the state that sees the consequence of poor infrastructure power networks to farmers and communities right across the state, hence my support for a power network that can be capable of delivering productivity gains, deliver services to communities and possibly returning renewable energies back into the energy grid.

This investment has been called for by members of our community over a period spanning six years. Upgrading less than 100kms of single-phase line directly supplying 1,130 Tyrendarra, Strathdownie, Cape Bridgewater and Gorae West customers is essential to capitalise on the Great South Coast's competitive advantages for economic growth and to unlock downstream economic and social value.

Specifically, this investment will create:

- economic growth and scaling up of key industries such as food and fibre, which drives 60 percent of the regional economy,
- infrastructure to support significant investment in renewables, irrigation, high tech applications and machinery, the Internet of Things and smart farming,
- new jobs, upskilling, better servicing of customers through improved turnaround times, and enhanced function of social, education and community facilities, and
- a positive flow-on effect to affiliated industries such as tourism, retail, education, hospitality and other sectors in the region.

I am concerned that this proposal has previously been declined due to the numbers not stacking up due to our low population density. Low population density in your process seems to disadvantage our region twice – firstly in the evaluation process where fewer people is falsely equated to reduced investment value, and secondly, where the user-pays model means we pay a disproportionate fee for the privilege of having infrastructure upgraded when it is well and truly past it's use-by date. I understand that there are calls to re-examine this approach in terms of its unintended negative impact

on regional communities and I cannot support this strongly enough. I consider it the role of government and power companies to fund the upgrade, with users charged for the electricity they use.

Thank you for your consideration. In closing, I urge you to proceed with this upgrade to enable South West Victoria's businesses, residents, and wider community to invest, build resilience and sustainability, and take advantage of opportunities to strengthen supply chains and local manufacturing.

Yours sincerely,

Paul Mumford
Gippsland farmer
