**Response to Powercor Revised Proposal 2021-2026: Request to upgrade Tyrendarra, Strathdownie Cape Bridgewater and Gorae West to three-phase power**

The purpose of this letter is to express my support for upgrading single phase power to three phase infrastructure in South West Victoria.

I, Colin Johnson, am the owner of Portland Air Conditioning & Refrigeration. We currently service the area covered in the above-mentioned area.

Single phase SWER line is very expensive to run and maintain equipment. Three phase power would be more cost effective and of greater benefit to not only dairy farmers but any business in the area.

This investment has been called for by members of our community over a period spanning six years. Upgrading less than 100kms of single phase line directly supplying 1,130 Tyrendarra, Strathdownie, Cape Bridgewater and Gorae West customers is essential to capitalise on the Great South Coast's competitive advantages for economic growth and to unlock downstream economic and social value.

Specifically, this investment will create:

- economic growth and scaling up of key industries such as food and fibre, which drives 60 percent of the regional economy,
- infrastructure to support significant investment in renewables, irrigation, high tech applications and machinery, the Internet of Things and smart farming,

I am concerned that this proposal has previously been declined due to the numbers not stacking up due to our low population density. Low population density in your process seems to disadvantage our region twice – firstly in the evaluation process where fewer people is falsely equated to reduced investment value, and secondly, where the user-pays model means we pay a disproportionate fee for the privilege of having infrastructure upgraded when it is well and truly past its use-by date. I understand that there are calls to re-examine this approach in terms of its unintended negative impact on regional communities and I cannot support this strongly enough. I consider it the role of government and power companies to fund the upgrade, with users charged for the electricity they use.

Thank you for your consideration. In closing, I urge you to proceed with this upgrade to enable South West Victoria's businesses, residents and wider community to invest, build resilience and

sustainability, and take advantage of opportunities to strengthen supply chains and local manufacturing.

Yours sincerely,

Colin Johnson  
Portland Air Conditioning & Refrigeration
