To Whom it May Concern

I write in support of the Enabling Residential Rooftop Solar regulatory proposal.

This proposal involves upgrading the electricity distribution network to allow customers to return up to 5 kW of electricity to the grid generated by small scale renewable energy systems.

I understand there are a number of locations in the Geelong region where limitations are in place which significantly reduce the ability of some house holders to participate in the generation and export of renewable energy.

This proposal involves unlocking the majority of the rooftop solar capacity which is currently constrained by the Enabling Residential Rooftop regulations.

I support the proposal given its ultimate goal is to reduce greenhouse emissions and provide more affordable power to the community.

Yours Sincerely
