1 Introduction

1.1 Background

SA Power Networks (**SAPN** or **the Business**) maintains and operates the electricity distribution network in South Australia. SAPN is a partnership of five incorporated entities (SAPN Partnership).

SAPN operates a distribution network that stretches across South Australia, comprising thousands of kilometres of power lines and hundreds of substations. SAPN is the distribution network service provider (**DNSP**) under the National Electricity Rules (**NER**) for this network, and consequently, certain services SAPN provides are subject to economic regulation by the Australian Energy Regulator (**AER**).

The AER classify services as **direct control services**, **negotiated distribution services** or **unclassified / unregulated services**. Direct control services are subject to direct regulatory oversight of revenues or prices, and are further classified as:

- Standard Control Services (**SCS**) - shared services that are bundled together to form the basic charges for use of the distribution system; or
- Alternative Control Services (**ACS**) - individual services initiated by and/or directly attributed to a specific customer.

The AER has proposed to reclassify SAPN's negotiated distribution services including public lighting, network ancillary services and some connection services as ACS.

Alternative control services are customer specific or customer requested services. These services may also have potential for provision on a competitive basis rather than by a single distributor.

In classifying the services as ACS, the AER will consider the potential for development of competition in the relevant market and the extent the costs of providing the relevant service are directly attributable to the person to whom the service is provided. Common examples of services which the AER has classified as alternative control services in the National Electricity Market (NEM) include public lighting, ancillary network services (i.e. request to move a pole) and large customer connections.

For the 2020 – 2025 Regulatory Control Period (**RCP**), SAPN's legacy metering services continue to be classified as ACS.

1.2 2020-25 RCP Regulatory Proposal

In accordance with obligations set out in the NER, SAPN submitted its 2020-25 regulatory proposal on 31 January 2019, setting out the SCS revenue SAPN proposes to collect from electricity consumers through distribution charges, and the ACS prices that can be charged to individual customers over the RCP.

The 2020-25 RCP Regulatory Proposal is summarised below:

- The full cost of providing the ACS is recovered from the customer or third-party who requested or initiated the service;
- For ancillary network services (e.g. special meter read, or asset relocation) and connection services classified as ACS (e.g. connection of a temporary overhead supply to an existing pole), SAPN proposed to charge on fixed-fee or quotation basis;
- Fixed-fees are proposed for high volume predictable services, with the fixed-fee charged irrespective of the actual time taken to provide the individual service;
- Quoted services are levied on a time and materials basis where activities may vary considerably between jobs based on customer requirements; and
- For the 2020-25 RCP, SAPN proposed to include a margin of 6% within the fixed-fee or quoted services for ancillary network services and connections services classified as ACS. The services are constructed on a time and materials fee for service or quoted service basis, with no asset recovery applicable.

The AER Draft Decision for SAPN's 2020-25 RCP, released on 8 October 2019, states:

"We accept SA Power Networks' proposal to include a margin component to the quoted services formula, but reject SA Power Networks' proposed definition of the margin (equal to 6 percent of the total cost of Labour, Contract Services and Materials). We substitute this component of the formula with a margin defined as 'an amount equal to SA Power Networks' nominal vanilla WACC applied to the total cost of Labour, Contract Services and Materials.'"

Following the above Draft Decision, SAPN is required to submit a 2020-25 RCP Revised Regulatory Proposal to the AER by 10 December 2019.

1.3 KPMG's Task

One of the roles performed by the AER is the determination of the allowed revenues that can be recovered by each DNSP for a five year regulatory control period, based on the expected costs to be incurred by the DNSP during that period. This regulatory determination process is performed by the AER in accordance with Chapter 6 (economic regulation of distribution services) of the NER.

There is little guidance in the NER as to how alternative control services are to be regulated, and the AER has discretion in designing the control mechanism and level of efficient expenditure for such services. For instance, the alternative control mechanism can adopt elements of Chapter 6 of the NER, such as the cost pass through provisions, with or without modification.

For alternative control services, the AER must have regard to the Revenue and Pricing Principles set out in Section 7A of the National Electricity Law. It is not required to (but has the discretion to) consider the operating and capital expenditure objectives which determined the assessment of efficient expenditure for direct control services.

In the exercise of this discretion, the AER could conceivably apply a Weighted Average Cost of Capital (WACC) for alternative control services that differed from the WACC applied to direct control services or have different returns for other alternative control services (NER, cl.6.2.6). However, such different returns would have to be justified by the different risk levels attaching to the provision of those services. Although to date, the AER tends to apply the same WACC across all standard control services.

Regarding the regulation of alternative control services, AER's approach has been to:

- Set individual maximum price caps for each service (**fee based services**). Under caps on the prices (or fees) of individual services, AER will estimate the cost of providing each service and set the price at that cost. The AER considers that the benefit of caps on the prices of individual services is that it provides cost reflective pricing and considers this benefit outweighs any detriment from increased administrative costs; or
- Permit certain alternative control services to be charged on a quoted basis (**quoted based services**), although it has a preference for fee or price cap or fixed fees forms of control. For quoted services, AER adopts a cost build-up approach.

For quoted services, AER approach is to approve unit input rates (i.e. labour, materials) where it is appropriate to do so. For fee based services, AER will approved the total fee for each service. AER will make these approvals as part of its regulatory determinations based upon forecasts of costs submitted by the DNSP in it is regulatory proposal. The AER ensures that there is consistency in its assessment of expenditure across all direct control services. To provide transparency and understanding on its approach, Chapter 6 of the NER requires the AER to develop a number of guidelines, including an expenditure forecast assessment guideline which sets out criteria for the assessment of the efficiency of costs arising from outsourcing arrangements.¹

SAPN has engaged KPMG to provide an expert report on the profit margins earned by contractors in competitive markets where the contractors provide similar services to those that are provided by SAPN.

Our task is therefore to identify the margins that would be earned by contractors in competitive markets in Australia providing similar services to proposed ACS that will be provided by SAPN. For the purpose of our search, we have concluded the search across the services broadly defined as Network Services.

1.3.1 Expert Witness

The author of this report is:

Brendan Rynne
KPMG
727 Collins Street
Melbourne, VIC 3008

¹ One criterion for assessing the efficiency of costs arising from contracts which have not been competitively tendered is that the margin is comparable to margins earned by similar providers in competitive markets.

Brendan Rynne's qualifications and relevant experience are set out in his CV attached at **Appendix A**.

Prior to writing this report, Brendan Rynne had no relationship with SAPN or its related entities except for the engagements described at **Appendix B**.

1.3.2 Deliverable

This report addresses the following key issues:

- Identifies the questions that the expert has been asked to address;
- Identifies the services provided by SAPN and attaches the service descriptions;
- Attaches the qualifications (in the form of a curriculum vitae) of the person(s) preparing this report;
- Identifies any current or future potential conflicts for SAPN;
- Comprehensively sets out the bases for any conclusions made;
- Relies on information or data that is fully referenced and can be made readily available to the AER or others; and
- Documents the methods, data, adjustments, equations, statistical package specifications/printouts and assumptions used in preparing this opinion.

KPMG understands this expert report is intended to be included by SAPN in the 2020-25 RCP Revised Regulatory Proposal which is to be submitted to the AER. This report may be published on the AER's website and may be provided by the AER to its own advisers.

1.4 Approach

This report follows the approach detailed below in undertaking the work defined in **Section 1.3**.

- 1 Identify and characterise the nature of the time and materials services provided by SAPN;
- 2 Consider the appropriateness of pricing margins to be applied to SAPN's time and materials based services. The pricing margin applied is based on a net cost plus. The appropriateness and use of return on assets and weighted average cost of capital is also to be addressed; and
- 3 Undertake a benchmarking analyses to identify companies providing services comparable to SAPN's ACS.

1.5 Findings of this report

Our findings are set out at **Section 3**. We conclude the weighted average range of Net Cost Plus (**NCP**) results for the 2013 to 2017 period earned by the identified Network Service providers has a median of 6.1%, as supported by the corroborative analysis in Search B.

1.6 Guidelines for Experts

Brendan Rynne has been provided with a copy of the Federal Court's "Expert Evidence" Practice Note. This report has been prepared in accordance with those guidelines.

Brendan Rynne acknowledges that he has read, understood and complied with the Federal Court of Australia's Expert Evidence Practice Note (GPN-EXPT) which applies to any proceeding involving the use of expert evidence.²

² <http://www.fedcourt.gov.au/law-and-practice/practice-documents/practice-notes/gpn-expt>.

2 Characterisation of services

Due to the nature of the proposed ACS SAPN provides, the search has been broadly characterised as Network Services. The services are summarised in the table below.

Table 1 Description of services provided by SAPN relevant to this report

Characterisation	Services
Network Services	<ul style="list-style-type: none"> • Design, consulting and drafting services including provision of supporting design and drafting services, undertaking tenders and tender evaluation for tendered works and site audits, surveys and calculations; • Augmentation and development services including installation and erection of electrical apparatus i.e. overhead lines, and testing and commissioning; • Asset replacement and maintenance including installation of service cable and organisation permits and operational requirements; and • Faults services including fault restoration and maintenance of a communication system between service provider employees, contractors and service recipient.

Detailed descriptions of the nature of activities performed by SAPN in relation to these services are provided in **Appendix C**.

3 Selection of an appropriate indicator

It is necessary to identify an appropriate pricing mechanism to be attributed to SAPN's proposed ACS, considering the nature of the services as detailed above.

The proposed ACS are services high in labour, principally related to activities undertaken by SAPN employees. As detailed in **Appendix C**, the nature of these activities are of a time and materials basis, utilising minor property, plant and equipment assets to complete the work required with no asset recovery applicable.

The selection of an appropriate pricing indicator, most appropriate to SAPN's proposed ACS must have consideration to the cost structure, type of expenses incurred by SAPN and select benchmark companies with a similar cost structure and activity that as closely as possible matches SAPN. In performing the ACS very few fixed or significant assets are used.

The proposed ACS performed by SAPN reflect a time and materials based function and we must look at companies with a similar profile and make comparisons on the same basis they would price their services. In pricing such services (predominately time and materials based) companies will seek to recover their expenses and costs and then seek to earn an appropriate profit margin on top of this cost base.

The basis of comparability for such service transactions, the net cost plus (NCP) is considered the most appropriate to SAPN's proposed ACS.

3.1 Net cost plus

The NCP is the ratio of operating profit to total operating costs. The indicator identifies the profit margin of a company after recovering their total operating costs.

The NCP is calculated as:

$$\text{Net Cost Plus} = \frac{\text{Operating Profit}}{\text{Total Operating Costs}^3}$$

Service businesses are most concerned to recover their costs and achieve an appropriate profit margin. As such, the NCP is an appropriate measure to determine the mark-up a service provider places on its operating costs to yield profits.

³ Total operating costs equals cost of sales plus operating expenses

3.2 Other margins considered

3.2.1 Return on average operating assets

The return on average operating assets (ROA) shows the percentage of how profitable a company's assets are in generating revenue. It is calculated by dividing a company's net income by total assets.

$$\text{Return on Assets} = \frac{\text{Net Income}}{\text{Total Assets}}$$

The ROA is suitable only where the margin (return) earned is principally driven from the assets (and mainly from significant fixed assets) and where the value of a company's operating assets has a high correlation with operating profits. The ROA is most appropriate when the nature of a business is highly capital intensive, performs manufacturing functions or utilises significant property, plant and equipment in performing its business activities.

In relation to the provision of the proposed ACS, SAPN provides technical services related to the power network. SAPN utilises only to a minor degree property, plant and equipment when providing ACS. As such, SAPN's level of assets do not have a high correlation to the operating profit it will generate from ACS. The performance of the ACS is not highly capital or asset intensive.

Accordingly, the ROA is not considered to be an appropriate profit indicator for the purposes of this analysis.

3.2.2 Weighted average cost of capital

The weighted average cost of capital (WACC) is the rate that a company is expected to pay on average to all its security holders to finance its assets. It calculates a firm's cost of capital in which each category of capital is proportionately weighted.

$$WACC = \frac{E}{V} \times Re + \frac{D}{V} \times Rd \times (1 - Tc)$$

Where:

Re = Cost of Equity

Rd = Cost of debt

E = Market value of the firm's equity

D = Market value of the firm's debt

V = E + A = Total market value of the firm's financing

E / V = Percentage of financing that is equity

D / V = Percentage of financing that is debt

Tc = Corporate tax rate

The purpose and intent of a WACC is very different when applied as a pricing indicator. The reference is on the return expected by investors on debt and equity with little direct connection to the pricing of a defined and discreet service transactions. In a services context the direct nexus is what profit mark up or margin must one earn over and above expenses / cost incurred in performing the services.

The WACC poses a different set of questions and objectives. Its primary use is by lenders and shareholders to ascertain a fair return they expect to receive on the funds or capital they have provided and is not on the basis of services they perform. The WACC indicates the return that both stakeholders can expect to receive, identifying the opportunity cost of investing cash into a company. In addition, company directors use WACC to make internal decisions, such as the economic feasibility of mergers and other expansionary opportunities.

The WACC measures the return on combined capital and is a useful valuation tool for business or asset valuation purposes. It is not appropriate to use it as a measure of the return on activities undertaken by a service provider.

It is important to appreciate that the actual return to networks for direct control services could differ from the allowed WACC. This is due to other features of the AER regulatory framework including incentive schemes, expenditure performance under the ex-ante allowance and rewards for service performance. A network could earn higher returns through:

- being more efficient and incurring less costs than allowed expenditure-under the AER expenditure incentives for operating and capital expenditure, 30% of any out-performance is provided to the network with the remaining 70% shared with customers;
- achieving rewards under the AER demand management incentive scheme; or
- through achieving performance targets. The AER Service Service Performance Target Incentive Scheme encourages network to provide a high level of service for all users by rewarding good performance and penalising poor performance. The potential reward could be up to 5% of the total allowed revenue

Regulated entities are generally subject to a 'building block' approach to determining allowable revenue for the monopoly infrastructure service they provide. The building block methodology allows the regulated entity to earn (a) a return on its asset base, which is determined by applying a WACC to the organisation's regulated asset base which has been valued on a historical cost basis; (b) a depreciation recovery for that asset base; and (c) efficient operating and maintenance expenses.

In the context of this engagement, SAPN utilises some in-house services to meet its operating expense needs rather than 'buying them in' from the outside market. To this end, were SAPN only to receive payment for the direct expenses incurred in the provision of these services, then the allowable revenue, and ultimately price paid by the consumer is not fully reflective of the true market cost of this service. For this market cost to be replicated in the allowable revenue calculation, a market comparable mark-up needs to be added to the internally provided operating expense costs which represents the profits that would be earned by third party independent providers were these goods and services to be purchased in the external marketplace. This is most appropriately measured against the cost plus profit margin earned by others in the market place in relation to the cost base of the similar services rendered.

To this end applying a WACC as the mark-up is not the appropriate measure, but rather a net-cost plus margin as determined through a benchmarking of comparable companies.

3.3 Application to SAPN

SAPN's proposed ACS involve the provision of services to customers, utilising only minor property, plant and equipment. As such, this report must identify an appropriate and relevant margin earned by comparable companies. Following the analysis above, the NCP indicator is considered the most appropriate indicator to identify the revenue generated by Network Service providers that most closely aligns with the cost of the proposed ACS.

On this basis, the benchmarking analysis below will analyse the NCP ratio of Network Service companies considered to be providing services comparable to SAPN's proposed ACS.

3.4 Interpreting margins

When calculating and interpreting profit margins it is important to examine the trends for individual companies over time as well as to compare a company's profitability levels to its competitors and to industry norms. However, it is crucial to note that margins can differ significantly from company to company and industry to industry. Some industries, historically, have much higher margins relative to others. For this reason, when comparing companies on the basis of their profit margins, it is important to compare firms in similar lines of business. Differences in margins for companies in the same industry provide insights into industry and company specific cost structures. However, like all forms of financial analysis, margin analysis is only as good as the timeliness and

quality of the underlying financial statement data. Furthermore, it is important to consider the company's industry and its position in its business cycle to put its margins in proper context.

The approach adopted in this report is designed specifically to provide the most accurate measure of the arm's length returns that should be earned on the provision of the service activities. This is achieved via a combination of steps designed to increase the comparability of the data identified, and statistical analysis to best identify relevant trends, and eliminate outlying results that may otherwise distort the recommended outcomes.

4 Benchmarking analysis

4.1 Introduction

A comparable search has been undertaken to identify a set of independent Network Service providers comparable to SAPN's proposed ACS, referred to as **Search A**.

A key aspect of Search A is the criteria for providers of network and management services to be independent. This criteria is utilised as the financial results of independent companies have a higher degree of reliability in contrast to controlled companies, as financial results are less tainted by ownership structures and non-arm's length transactions.

However, the independent entity screening criteria comes at a considerable trade off and significantly reduces the number of potential companies comparable to the services provided by SAPN. Because very few direct or closely comparable benchmarks could be identified, Search A was widened to include companies residing outside Australia and operating in differing industries outside utilities, energy, gas, water. As such, the Compustat and Company 360 databases were utilised in order to identify companies residing in Australia and internationally. This search led to fewer closely comparable companies being identified and the benchmarking was based on broad functional similarity of activities performed.

To corroborate Search A and for the purpose of identifying solely Australian entities operating in industries more closely aligned with SAPN **Sections 4.3** and **4.4** contain corroborative benchmarking analyses, removing the independent entity screening criteria, and restricting the geography and industry conditions, referred to as **Search B**. this search has been completed utilising the Orbis database to provide Australian entities and the corroborative analysis is to be read in conjunction with Search A.

4.2 Approach

4.2.1 Search criteria

KPMG selected appropriate Standard Industry Classification (SIC) codes that contain companies performing comparable functions to SAPN's proposed ACS.

The location of the companies for Search A included the markets of Australia, Canada, New Zealand and United Kingdom. These additional countries were included within our search so as to identify a higher number of potential comparables (to improve the statistical reliability of our results), while retaining market comparability (as these markets are generally comparable in terms of market characteristics to Australia).

Search B was restricted to only Australian entities.

Each of the companies identified under the industry codes from the database were then subject to further quantitative and qualitative screens as detailed in **Appendix D.3**.

4.3 Search A

The financial results of the comparable Network Services providers identified under the Search A qualitative and quantitative criteria is provided in **Appendix D.7.1** and summarised in the table below.

Table 2 NCP ratio of Network Service providers 2013 to 2017

No.	Company name	NCP 2013	NCP 2014	NCP 2015	NCP 2016	NCP 2017	Weighted Average 2013-2017
1	Powertech Pty Ltd	8.7%	14.5%	17.4%	2.2%	0.0%	11.2%
2	Civil & Allied Technical Construction Pty Ltd	5.4%	12.2%	3.1%	4.3%	-	6.7%
3	Everett Smith & Co. Pty. Ltd.	13.5%	6.4%	9.5%	10.9%	14.3%	10.9%
4	Southern Cross Electrical Engineering Limited	12.6%	8.9%	4.3%	6.1%	3.2%	7.9%
5	Wave International Holdings Pty Ltd	5.9%	-9.9%	4.6%	0.6%	-	0.5%
6	Robert Bird Group Pty Ltd	-4.7%	5.3%	1.8%	3.9%	2.7%	2.0%
7	Downer Edi Limited	7.7%	8.8%	8.5%	8.2%	7.0%	8.0%
8	Seymour Whyte Limited	4.4%	6.1%	7.2%	2.0%	0.9%	3.7%
9	Stowe Australia Pty Limited	2.3%	2.5%	2.8%	4.2%	NA	2.9%
10	Logicamms Limited	11.6%	8.6%	9.6%	-7.1%	-9.0%	3.4%
11	Cardno Limited	12.9%	11.9%	11.4%	2.2%	-1.0%	7.3%
12	Osd Pty Ltd	10.9%	7.0%	1.8%	2.7%	4.5%	6.6%
13	Lycopodium Limited	11.2%	4.1%	-2.6%	3.9%	6.5%	5.6%
14	Worleyparsons Limited	7.4%	5.7%	4.6%	2.9%	4.1%	5.1%
15	Service Stream Limited	-2.4%	4.4%	6.6%	8.7%	10.7%	5.2%
16	Aurecon Group Pty Ltd	12.9%	10.6%	7.2%	11.0%	11.1%	10.4%
17	Underground Cable Systems Pty. Ltd.	35.2%	28.9%	33.7%	NA	NA	32.7%
18	Addison Project Plc	5.8%	4.5%	4.3%	5.6%	N/A	5.0%
19	Snc-Lavalin Group Inc	3.7%	6.1%	6.9%	3.6%	4.8%	5.1%
20	Wood Group (John) Plc	6.5%	9.8%	9.7%	3.5%	2.9%	8.0%
Minimum		-4.7%	-9.9%	-2.6%	-7.1%	-9.0%	0.5%
Lower quartile		4.9%	4.9%	3.7%	2.2%	0.9%	4.3%
Median		7.5%	6.7%	6.7%	3.9%	4.1%	6.1%
Upper quartile		12.1%	10.2%	9.5%	6.1%	7.0%	8.0%
Maximum		35.2%	28.9%	33.7%	11.0%	14.3%	32.7%

The weighted average NCP for the 2013 to 2017 period earned by the identified network service providers ranged from 0.5% to 32.7% with an inter-quartile range of 4.3% to 8.0% and a median of 6.1%.

4.4 Search B

A corroborating search has been undertaken using the Orbis database to identify Australian Network Services providers comparable to SAPN's proposed ACS. The search is detailed in **Appendix D.6**.

4.4.1 Utilities entities

A key screening criteria for the benchmarking analysis is the industry and functional comparability of a company and its financial results.

SAPN is a utilities company operating and maintaining the electricity distribution network in South Australia. As such, in our first step we identified potential utilities companies operating in Australia with publically available information, in order to calculate the NCP margin of these entities. **Appendix D.6.1.2** ascertains a sample of 25 Australian utilities companies and calculates the NCP margin. The table below contains a summary of the findings.

Table 3 NCP ratio of a sample of 25 Australian utilities companies

NCP margin	2014	2015	2016	2017	2018	Weighted average
Minimum	-17.25%	-37.74%	-7.14%	14.51%	-11.07%	0.35%
Lower Quartile	29.93%	15.94%	26.67%	45.65%	43.28%	25.16%
Median	60.76%	37.30%	64.16%	74.34%	59.86%	57.84%
Upper Quartile	122.36%	80.40%	86.77%	101.38%	79.81%	81.06%
Maximum	214.43%	164.50%	194.00%	736.73%	230.57%	181.20%

Given the significantly high NCP margins observed a closer examination of the companies revealed in Table 4 below, the Australian utilities companies hold a significant amount of fixed assets (for example power plants, generation stations or pipelines) which they utilise and distribute in order to generate revenue.

Table 4 Percentage of fixed assets to total assets for a sample of 25 Australian utilities companies

Percentage of fixed assets to total assets	Average (2014 to 2018)
Minimum	7.71%
Lower Quartile	67.40%
Median	76.80%
Upper Quartile	87.16%
Maximum	93.53%

Appendix D.6.1.2 contains the percentage of fixed assets total assets (2014 to 2018 period) for the sample of utilities companies.

It is therefore concluded that the NCP ratios of these companies may not accurately reflect the margins on operating expenses returned by utilities entities for predominately only Network services as their revenues are instead significantly generated from fixed assets.

4.4.2 Approved margins for regulated entities

As part of our research we sought publically available information to identify margins that have been approved for utilities under the regulatory framework, in particular ACS related services. However, there is limited recent publically available information.

According to a benchmarking study completed for the 2010 to 2014 years for Australia Gas Networks Ltd, the average earnings before income and tax margin earned by 22 contractors providing asset management services ranged from 5.9% to 7.3%⁴. In addition, the Australian Competition & Consumer Commission (ACCC) released a report in June 2018 in relation to retail electricity pricing. They found the retail net margin percentage for the 2015 to 2017 years was just above 8.0% across the National Electricity Market⁵.

We can identify from our work in this industry and our knowledge to the margins applied by others that the proposed margin to be applied by SAPN to the proposed ACS is in line and does not exceed the applied NCP margins of SAPN's peers and other utilities in similar cases.

4.4.3 Network Service providers

The purpose of this analysis is to identify an appropriate return on the proposed ACS SAPN will provide. The provision of ACS is described in detail in **Section 2**. These services are activity based (i.e. derived from labour / effort) being essentially time and materials based. Income from ACS is not generated from assets. SAPN employees utilise minor property, plant and equipment when performing the proposed ACS.

An extended corroborative analysis was accordingly conducted to focus on entities functioning mainly as service providers, offering services sufficiently comparable to SAPN's proposed ACS and not generating significant income from fixed assets.

Considering the requirements for the maintenance and operation of SAPN's power network we have focused the search on companies that perform network related or similar services, focusing on maintenance, design and construction related to utilities (water, gas, electricity, telecommunications and/or transmission construction, maintenance provision etc.).

The NCP of the 8 comparable companies performing Network Service activities for the period FY2014 to FY2018 is summarised in the table below.

Table 5 FY2014 - FY2018 net cost plus margin of comparable entities to Network Services

No.	Company name	NCP 2014	NCP 2015	NCP 2016	NCP 2017	NCP 2018	Weighted average 2014-2018
1	Clough Projects Pty Ltd	-1.48%	0.06%	0.87%	0.22%	N/A	-0.20%
2	Everett Smith & Co. Pty. Ltd.	6.42%	9.53%	10.99%	14.42%	18.04%	11.84%
3	GHD Global Pty Ltd	8.64%	14.32%	12.34%	10.84%	5.99%	10.47%

⁴ Australian Gas Networks, Benchmark Study of Contractor Profit Margins (2005-2014), K Lowe Consulting, June 2015.

⁵ ACCC, Restoring electricity affordability and Australia's competitive advantage, June 2018.

No.	Company name	NCP 2014	NCP 2015	NCP 2016	NCP 2017	NCP 2018	Weighted average 2014-2018
4	Jacobs Group (Australia) Pty Ltd	N/A	8.49%	1.22%	6.69%	8.55%	6.35%
5	Lycopodium Limited	4.83%	-1.75%	3.42%	6.28%	13.87%	5.93%
6	Mcdermott Australia Pty. Ltd.	2.57%	2.75%	1.06%	6.51%	22.12%	4.91%

	Median	4.83%	5.62%	6.25%	7.89%	9.97%	6.61%
	Upper Quartile	6.42%	9.27%	11.32%	9.71%	15.96%	9.69%
	Maximum	8.64%	14.32%	35.44%	14.42%	22.12%	11.84%

For a full financial analysis of the NCP of the selected comparables please refer to Appendix D.7.2.

5 Conclusion

The analysis presented in this report identifies the following conclusions.

Please note, Brendan Rynne has made all the inquiries that he believes are desirable and appropriate and that no matters of significance that he regards as relevant have, to his knowledge, been withheld.

- The average NCP earned by the identified Network Service providers had an interquartile range of 4.3% to 8.0% and a median of 6.1%;
- The Network Service providers identified in a corroborative search had an interquartile range of 5.68% to 9.69% and a median of 6.61%.

Relevant experience

Brendan is KPMG's Chief Economist. Brendan provides his clients with economics advice in a wide variety of contexts (including from a regulatory perspective). He has been an advisor at KPMG for the past 18 years, during which time he has completed the following engagements relevant to this assignment:

Regulatory Economics

- Victorian Department of Infrastructure — KPMG has recently prepared a Business Impact Assessment for DOI relating to the introduction of the proposed Victorian Renewable Energy Obligation.
- Macquarie Bank - KPMG were engaged by the Macquarie Bank led consortium to review the regulatory issues associated with the Dampier to Bunbury Natural Gas Pipeline.
- FRC Submission – ENERGEX – KPMG assisted the ENERGEX Regulatory Group prepare a submission to the Queensland Energy Competition Commission (ECC) on proposed policy positions for the introduction of full retail competition in Queensland.
- FRC Modeling – ENERGEX Retail – KPMG assisted ENERGEX Retail to develop a spreadsheet model to assess the impact of full retail competition on customer margins and, hence, ENERGEX Retail's net margin.
- Regulatory Price Review Submission — ENERGEX — KPMG assisted ENERGEX with the preparation of their regulatory price review submission to the Queensland Competition Authority.
- Review of ring-fencing compliance — Ergon Energy — KPMG undertook an independent assessment of Ergon Energy's compliance with its ring-fencing obligations. This assessment, which was submitted to the Queensland Competition Authority, incorporated a systems review and extensive staff interviews. The assessment focused on the non financial aspects of the ring-fencing obligations, namely controls on information flows between related businesses and the "Chinese Walls" protocols in place between the regulated distribution business and the related businesses.

- External Labour Rate Forecasting CitiPower / Powercor — KPMG were engaged initially by CitiPower and Powercor to forecast external labour rates across a number of labour categories for the next regulatory period.
- Benchmarking of non-network operating costs CitiPower / Powercor — KPMG assisted CitiPower and Powercor to benchmark their non-network operating costs as part of their preparations for the price reset process.
- Benchmarking of contractor margins CitiPower / Powercor — KPMG assisted CitiPower and Powercor to benchmark the EBIT margins that would be earned by contractors in competitive markets in Australia providing Network, Corporate and Information Technology services.
- Consumer preferences for service standards in electricity distribution — Ergon Energy — in 2003, KPMG undertook a consumer research study for Ergon Energy on consumer preferences for service standards in electricity distribution. As part of this study, KPMG determined consumption models for business and residential customers, and considered the relative importance of different factors in customers' decision making processes. KPMG were engaged in 2004 to undertake further consumer research to validate the results of the original consumer research and expand the study to consider regional differences in preferences and performance thresholds for whole communities.
- Advice on National Electricity Code — ENERGEX Limited — KPMG advised ENERGEX on the provisions of the National Electricity Code and the regulator's application of those provisions and an earlier price determination for ENERGEX.
- Independent Review of Ring-Fencing Compliance — ENERGEX Limited — KPMG completed an independent review of ENERGEX's compliance with the requirements of the Queensland Competition Authority's Ring Fencing Guidelines. This review incorporated extensive consultation with ENERGEX staff and a review of internal policies and procedures for addressing the ring-fencing requirements.

Qualifications and memberships

- Bachelor of Economics, University of Queensland
- Master of Social Science (Economics), University of Queensland
- Master of Applied Finance, Queensland University of Technology
- Affiliate of the Institute of Chartered Accountants in Australia

Appendix B – Brendan Rynne's relationship with SAPN or its related entities

B.1 Between KPMG and SAPN

- KPMG assisted SAPN to under undertake an independent assessment of SAPN's IT regulatory submission for the 2015-20 regulatory period.
- KPMG seconded a regulatory modelling specialist to the SAPN team where he worked closely with the SAP consultant to reconstruct 50,000+ assets in the financial asset register, to one better structured for RIN reporting.
- KPMG developed an operating model to set up SAPN's non-regulated business known as Enerven.
- KPMG assisted SAPN to investigate alternative revenue opportunities in the energy and solar market outside of its regulated businesses.
- In response to the new guidelines released by the Australian Energy Regulator, KPMG assisted SAPN to ensure it was in compliance.

B.2 Between Brendan Rynne and SAPN

Brendan Rynne is a Partner of KPMG. He has no relationship with SAPN outside of his role with KPMG. In that role Brendan has been involved in the following engagements (with CitiPower and Powercor, related entities of SAPN) only.

- External Labour Rate Forecasting - CitiPower / Powercor - KPMG were engaged by CitiPower and Powercor to forecast external labour rates across a number of labour categories for the next regulatory period.
- Benchmarking of non-network operating costs - CitiPower / Powercor - KPMG assisted CitiPower and Powercor to benchmark their non-network operating costs as part of their preparations for the price reset process.
- Benchmarking of contractor margins - CitiPower / Powercor - KPMG assisted CitiPower and Powercor to benchmark the EBIT margins that would be earned by contractors in competitive markets in Australia providing Network, Corporate and Information Technology services.

Appendix C - Descriptions of proposed Alternative Control Services

C.1 Design, consulting and drafting

- Overhead line and underground cable design
- Distribution substation design
- SCADA & communication design
- Provision of supporting design and drafting services
- Provision of civil, structural, primary and secondary electrical engineering design for zone substations
- Provisions of drawings and design of constructed substations
- Update route plans and circuit data sheets
- Update Spatial and GIS systems
- Update underground plans
- Determine detailed requirements for supply offers and asset relocation offers to customers
- Liaising with customers on distribution substation enclosure design
- Undertake tenders and tender evaluation for tendered works
- Determine gifted assets, rebates and pioneer schemes
- Development of client relationships
- Site audits, surveys and calculations

C.2 Augmentation and development

- Installation and erection of electrical apparatus i.e. overhead lines, underground cables and substations from 240V to 66kV
- Testing and commissioning

C.3 Asset replacement and maintenance

- Electrical apparatus, i.e. overhead lines, underground cables and substations from 240V to 66kV, construction, repair and preventative maintenance
- Erection of poles
- Erection of public lighting lanterns and associated equipment
- Installation of service cable
- Installation of low voltage services in customer properties
- Organise permits and operational requirements as appropriate

C.4 Faults services

- Primary fault restoration
- Available personnel to carry out after-hours emergency fault response and rectification
- Faults dispatch
- Provide faults and maintenance services on the HV and LV distribution network
- Provide and maintain a communication system that allows communication between the service providers employees and contractors and the service recipient
- Appropriate disposal, or return, of all salvage that exists at the end of the provision of faults and maintenance services

Appendix D – Detailed benchmarking analysis

D.1 Search process

Our search processes seek to benchmark the margins that would be achieved by comparable entities providing Network Services. We have therefore sought to identify benchmark returns by identifying a set of service providers for each service type for the purposes of margin analysis.

The search process followed in conducting the benchmarking analysis consisted of two main stages of identification and screening, namely:

- 1 Electronic identification of a sample of companies which would be potentially comparable to the Network Service providers using a combination of commercial databases;
- 2 Refinement of the initial sample of companies using a combination of quantitative screening criteria applied in the databases and manual review of the business descriptions of the remaining companies to identify a set of sufficiently independent comparable companies.
- 3 Identifying a final set of comparables.

The search process is summarised below:

D.1.1 Databases utilised

D.1.1.1 Compustat Global

KPMG used the Compustat Global database to search for independent broadly comparable companies in Australia, New Zealand, Canada and the UK. Specifically, we accessed the March 2018 version of Compustat Global database.

Compustat Global database organizes company information according to Standard Industry Classification (SIC) codes and textual descriptions. SIC codes are used to promote comparability of establishment data describing various facets of the economy. The classification covers the entire field of economic activities and defines the industries in accordance with the composition and structure of the economy.

D.1.1.2 Company 360

Company360 provides in-depth business information and analysis on Australia's leading 50,000 private and public companies.

Powered by Dun & Bradstreet's commercial database, with additional insight from journalists and researchers, Company360 provides information on private and public companies, including Company financial reports; Financial ratios & analysis; Structure & shareholders - including linkage to parent companies, subsidiaries & affiliates; Board & executive profiles; Company overviews; and ASX data (listed companies).

D.1.1.3 Orbis

KPMG used the Orbis database, created by Moody's analytics company Bureau Van Dijk. Orbis has information on more than 310 million companies globally, and 27 million Australian companies.

Orbis utilises over a hundred search criteria to find companies with precise profiles, including SIC codes and textual descriptions.

D.2 Selection of industry codes

D.2.1 Search A

KPMG selected appropriate SIC codes that contain companies performing comparable functions to SAPN's Network Services. The US SIC code system is the standard underlying all establishments based on US federal economic statistics classified by industry. US SIC codes are used to promote comparability of establishment data describing various facets of the US economy and have been extended to firms operating in other countries. The classification covers the entire field of economic activities and defines the industries in accordance with the composition and structure of the economy.

The following industry codes were used in our Australian searches:

SIC code	Industry group
Network Services	
1521	General Contractors Single Family Houses
1522	General Contractors Residential Buildings, other than Single Family
1531	Operative Builders
1541	General Contractors Industrial Buildings and Warehouses
1542	General Contractors Non-residential Buildings
1611	Highway and Street Construction, except Elevated Highways
1622	Bridge Tunnel and Elevated Highway Construction
1623	Water, Sewer, Pipeline, and Communications and Power Line Construction
1629	Heavy Construction, Not Elsewhere Classified
1711	Plumbing, Heating and Air-conditioning
1721	Painting and Paper Hanging
1731	Electrical Work
1741	Masonry, Stone Setting and Other Stone Work

SIC code	Industry group
1742	Plastering, Drywall, Acoustical and Insulation Work
1743	Terrazzo, Tile, Marble and Mosaic Work
1751	Carpentry Work
1752	Floor Laying and Other Floor Work, Not Elsewhere Classified
1761	Roofing, Siding and Sheet Metal Work
1771	Concrete Work
1781	Water Well Drilling
1791	Structural Steel Erection
1793	Glass and Glazing Work
1794	Excavation Work
1795	Wrecking and Demolition Work
1796	Installation or Erection of Building Equipment, Not Elsewhere Classified
1799	Special Trade Contractors, Not Elsewhere Classified
4931	Electric and Other Services combined
4932	Gas and Other Services Combined
4939	Combination Utilities, Not Elsewhere Classified
4952	Sewerage Systems
4953	Refuse Systems
4959	Sanitary Services, Not elsewhere classified
4971	Irrigation Systems
8711	Engineering Services

The location of the companies was restricted to the markets of Australia, Canada, New Zealand and United Kingdom. These additional countries were included within our search so as to identify a higher number of potential comparables (to improve the statistical reliability of our results), while retaining market comparability (as these markets are generally comparable in terms of market characteristics to Australia).

D.2.2 Search B

Following the above search for independent entities located in Australia, Canada, New Zealand and the United Kingdom, the following SIC codes will be used to identify companies which may not be independently controlled. Due to the removal of independence screening, the SIC code selection has been reduced to more closely align with the functional profile of SAPN's Network Services.

SIC code	Industry group
1623	Water, sewer, pipeline and communications and power line construction
4922	Natural gas transmission
4923	Natural gas transmission and distribution
4924	Natural gas distribution
4931	Electric and other services combined
4932	Gas and other services combined
4939	Combination utilities, not elsewhere specified
8711	Engineering services

Each company identified under the industry codes from the databases were then subject to the following quantitative and qualitative screens.

D.3 Additional quantitative and qualitative screens

D.3.1 Quantitative screening

The companies identified were screened to eliminate companies with any of the following characteristics:

- **Insufficient financial data:** Companies were screened for financial data availability. If three years of sales data and/or operating profit/losses data over the last 5 years were not available for a company, it was eliminated. The use of multi-year data captures market cycles and reduces the likelihood that single year anomalies in financial results will distort the range of arm's length outcomes.
- **Independence screening (Search A only):** An independence screen was used to reject controlled companies. This screen is used to filter companies that are not acting independently, as the financial results of these entities may be impacted by related party transactions or business decisions which do not reflect market conditions or behaviour. Where a parent entity was identified as a potential comparable, we have had regard to the consolidated financial statement of the Group. Therefore companies which were found to be subsidiaries or non-independent were eliminated even if they were considered to undertake functionally similar activities as the Network Services.
- **Losses screening:** Any companies with losses in 3 out of the last 5 years were rejected as these companies may be experiencing operational risks which does not make them suitable to be used as a benchmark; and
- **Revenue screen:** Companies with less than AUD 5 million (and more than AUD 800 million in revenue, Search B only) were excluded from the set on the basis that their scale of operations are not sufficiently comparable to the Network Services activities. Smaller companies may also be at greater risk of revenue volatility which does not make them suitable to be used as a benchmark.

D.3.2 Qualitative screens

Following the application of the quantitative screens, the initial shortlist of companies were individually reviewed in detail based on qualitative criteria to eliminate companies regarded as not sufficiently comparable to the Network Service activities.

The manual qualitative screening criteria rejected companies for the following reasons:

- If manual investigation identified any of the rejection criteria set out under quantitative screening;
- Companies engaged in materially different functions or services (for example, companies that hire or lease assets to customers). These companies were rejected as their financial results do not reflect the same revenue generating activities; and
- Other reasons include: insufficient qualitative information to verify the business operations of the potential comparable, duplicate companies, not-for-profit organisations, partnership and trust based structures and dormant companies.

Additional sources of information, including published annual reports and company websites were also reviewed to assess the qualitative comparability of identified companies.

D.4 Financial analysis

For purposes of establishing a range of outcomes, we have obtained and analysed the financial results of the comparable companies identified. In undertaking this exercise, the following factors have been considered and addressed.

D.4.1 Comparability adjustments to reported profit amounts

We make the following observations with respect to margin analyses:

- If possible, net profit should be adjusted to exclude non-operating income and expenses so that comparisons are made with respect to operating profit; and
- The use of net profit before interest and taxes and other non-operating items, enables operating profits to be compared without being impacted by the potentially distorting effect of whether the business is funded by debt or equity or non-operating impacts.

In light of these statements, we have calculated the NCP of the comparable companies after making the following adjustments (as necessary) to the publicly available financial information:

By subtracting from the reported profit before tax amount, non-operating income items such as (but not limited to):

- Interest income;
- Dividend income;
- Rental income;
- Gain on disposal of investments;
- Profit on sale of non-current assets;
- Profit from equity accounted associates; and
- Individually significant items.

By adding back to the reported profit amount, non-operating expenses, such as (but not limited to):

- Interest expense;
- Impairment of goodwill;
- Loss on disposal of non-current assets;
- Loss on disposal of investments;
- Finance charges on capitalised leases;
- Diminution in value of investments;
- Individually significant items; and

- Depreciation and Amortisation¹.

D.4.2 Fiscal matching

In performing a comparability analysis, we are limited to using publicly available data. In order to increase the accuracy of the analysis, we fiscally matched the financial years of the selected comparables to the year end of 30 June. As an example, the 2016 fiscal year has therefore been matched with comparables whose fiscal year ended in the period from December 2016 to November 2017.

D.4.3 Use of multi-year data

The use of multi-year data ensures that abnormal factors in any one year do not affect the conclusions reached. We believe that a five year period provides a reasonable approximation of the medium to long term business conditions that would mitigate the impact of these abnormal factors.

D.4.4 The use of the weighted average

For the purposes of this analysis, the weighted average calculation method has been utilised for the comparable companies results, based on the following reasoning:

- The weighted average 'weights' financial data for comparable companies over a period of time. It does this by aggregating the data for multiple individual years of results before running the ratio calculations, i.e. the FY2014 – 2018 financial information is added up and the ratio analysis undertaken on the total to achieve the weighted average calculation;
- With this approach, data elements with a high weight (e.g. financial years that had larger profiles of income and expenses) contribute more to the weighted average than do data elements with a low weight; and
- If all the weights are equal, then the weighted mean is the same as the arithmetic mean.

D.4.5 Use of a range

We note that the application of the methodology described above may produce a range of results, which, because of the constraints outlined above, may have unequal comparability because of the varying degrees of functional similarity that exists between the enterprises being compared. When account is taken of the differences between the enterprise and the comparables being used, it is a matter of judgement where the appropriate point at which the enterprise being tested should fall within the range of comparables.

Our analysis has used an inter-quartile range in order to arrive at a range of comparable outcomes. The inter-quartile range excludes the top and bottom quartile of results, as these are considered to be outliers for statistical benchmarking purposes.

¹ While depreciation costs would typically be considered to be operating in nature, the related entities providing services to SAPN do not incur depreciation or amortization costs. Therefore, to improve the accuracy of the financial analysis, depreciation and amortization costs have been treated as non-operating for the purposes of the NCP calculation.

D.5 Results of comparables search – Search A

The table below provides a summary of the screening process.

Region	Australia	AU, CAD, NZ and UK	
Database	Company 360	Compustat	Total
Number of companies in database:	50,000	60,045	110,045
Less: Rejected based on SIC code	44,837	59,460	104,297
Less: Rejected based on location (Compustat)	-	518	518
Less: ASIC status (Company360)	70	-	70
Less: Financial availability screen	3,956	21	3,977
Less: Rejected based on revenue (Company360)	163	-	163
Companies passing quantitative screening	977	46	1,020
Less: Companies undertaking different functions	230	22	252
Less: Companies in ongoing losses	3	-	3
Less: Companies in administration/deregistered	1	-	1
Less: Companies with insufficient financial information	33	-	33
Less: Companies with no websites, business descriptions etc.	295	-	295
Less: Companies not independent (based on further review)	369	6	375
Less: Duplicate results between searches (eliminations)	-	15	15
Less: Companies with significantly different business structures	26	3	29
Companies passing qualitative and quantitative screens	17	-	17
Total rejected	957	46	1,003
Additive approach²			3
Final set of companies accepted			20

A listing of the 1,003 companies eliminated following the qualitative screening and the reasons for their exclusion are set out below.

D.5.1.1 Final comparable companies

No.	Company name		
1	Powertech Pty Ltd	11	Cardno Limited
2	Civil & Allied Technical Construction Pty Ltd	12	Osd Pty Ltd
3	Everett Smith & Co. Pty. Ltd.	13	Lycopodium Limited
4	Southern Cross Electrical Engineering Limited	14	Worleyparsons Limited
5	Wave International Holdings Pty Ltd	15	Service Stream Limited
6	Robert Bird Group Pty Ltd	16	Aurecon Group Pty Ltd
7	Downer Edi Limited	17	Underground Cable Systems Pty. Ltd.
8	Seymour Whyte Limited	18	Addison Project Plc

² Companies included via the additive approach represent additional entities that were included based on KPMG's previous experience in searching for similar comparables.

9	Stowe Australia Pty Limited	19	Snc-Lavalin Group Inc
10	Logicamms Limited	20	Wood Group (John) Plc

D.6 Results of comparables search - Search B

The table below provides a summary of the screening process

Database	Companies removed	Number of companies
Number of active companies in database:		210,752,768
Less: Companies in a location other than Australia	195,178,317	15,574,451
Less: Rejected based on revenue	15,553,113	21,338
Less: Rejected based on SIC code	20,862	476
Companies passing quantitative screening		476
Less: Companies with insufficient financial information	208	268
Less: Companies in ongoing losses	45	223
Less: Companies undertaking different functions	215	8
Total rejected	210,752,758	
Final set of companies accepted		8

D.6.1.1 Final comparable companies

No.	Company name		
1	Clough Projects Pty Ltd	5	Lycopodium Limited
2	Everett Smith & Co. Pty. Ltd.	6	Mcdermott Australia Pty. Ltd.
3	Ghd Global Pty Ltd	7	Mott Macdonald Australia Pty Limited
4	Jacobs Group (Australia) Pty Ltd	8	Msp Engineering Pty Ltd

D.6.1.2 Sample of utility companies

The financial results for a sample of utility companies is provided in the table below. Please note, these companies are rejected under the above screening criteria due to functional differences from SAPN's Network Services.

No.	Company Name	NCP 2014	NCP 2015	NCP 2016	NCP 2017	NCP 2018	Weighted average	Percentage of fixed assets to total assets (Average FY14-FY18)
1	Ausnet Gas Services Pty Ltd	80.41%	110.00%	109.35%	104.55%	N/A	101.24%	76.80%
2	Ausnet Transmission Group Pty Ltd	124.95%	98.38%	93.14%	96.40%	N/A	102.15%	87.29%
3	Bald Hills Wind Farm Pty Ltd	N/A	88.16%	80.31%	92.75%	N/A	86.63%	77.62%
4	Cape Byron Power I Pty Ltd	N/A	-27.92%	15.83%	46.83%	33.44%	19.07%	82.54%

264	CUBE PTY LTD Cube Pty Ltd is responsible for the operation of the Osborn Cogeneration power station in Adelaide, South Australia, through its subsidiary OSBORNE COGENERATION PTY LTD. The plant, commissioned in 1998, is a natural gas powered facility comprising one gas turbine and turbine, generating 180 megawatts of electricity combined. It is powered by gas from the Cooper Basin and is a 50/50 joint venture between ATCO AUSTRALIA PTY LTD and ORIGIN ENERGY LIMITED. The plant had an Energy Services Agreement (ESA) with Penrice Soda Holdings Limited's soda ash production plant in Osborne, until Penrice ceased production at the site in 2013. The ESA was terminated and new arrangement was formed by which Cube would supply steam and deaerated water, operating as a combined cycle facility and all generation would become contract base energy, sold to Origin under an existing Power Purchase Agreement (PPA). In mid-2015 Cube entered into an amended PPA with Origin, by which the plant would convert to a tolling facility. Cube is based at Osborne, South Australia.	Not independent
265	CV SERVICES GROUP PTY LTD CV Services Group Pty Ltd is the parent and reporting entity for a group of building services businesses in Queensland. The company was formed in 2005 by the acquisition of VEOLIA ENVIRONMENTAL SERVICES (AUSTRALIA) PTY LTD's trenchless pipe-laying business. ITS Pipetech is 40%-owned by the Guernsey-based M3 Group with the remainder held by ITS's management. The company is based in the Sydney suburb of Seven Hills, New South Wales, with additional offices in Brisbane and Perth.	Went into acquisition
313 DOWNER UTILITIES NETWORKS PTY LTD	Downer Utilities Networks Pty Ltd is a wholly-owned subsidiary of DOWNER UTILITIES AUSTRALIA PTY LTD and was a specialist outsource provider of maintenance and capital works to power, gas and water utilities and suppliers. The company's contract with the major customer, SP AusNet (Group) expired in March 2013 and the contract has since been renewed with Downer Utilities Australia Pty Ltd. The company had an economic dependency on revenue earned from SP AusNet (Group) and therefore will cease to trade.	Not independent
314 DOWNER UTILITIES NEW ZEALAND PTY LTD	Downer Utilities New Zealand Pty Ltd is involved in the energy services industry in New Zealand through the provision of electrical and gas services. The company is a fully-owned subsidiary of DOWNER UTILITIES HOLDINGS AUSTRALIA PTY LTD, which trades as DownerTenix after ASX-listed engineering and construction giant DOWNER EDI LIMITED acquired Tenix in late 2014. The New Zealand arm of DownerTenix performs a wide variety of maintenance services including shutdowns and overhauls, refurbishments and repairs, callouts, and offshore oil and gas maintenance on both vessels and platforms. Downer Utilities New Zealand is based at the group's head office in North Sydney, New South Wales.	Not independent
315 DOWNER UTILITIES SDR AUSTRALIA PTY LTD	Downer Utilities SDR Australia Pty Ltd is a subsidiary of DOWNER UTILITIES AUSTRALIA PTY LTD, a leading provider of maintenance and capital works to the gas, electricity, water, wastewater, heavy industrial and mining sectors. The group formerly traded as Tenix. In October 2013, however, the Salteri family agreed to sell Tenix to ASX-listed engineering and construction giant DOWNER EDI LIMITED. The business now trades as DownerTenix and represents the new Utilities division of Downer EDI. Downer Utilities Australia is based in North Sydney, New South Wales.	Not independent
316 DOWNER UTILITIES SDR PTY LTD	Downer Utilities SDR Pty Ltd (formerly Tenix SDR Pty Limited) forms part of DOWNER UTILITIES AUSTRALIA PTY LTD, a provider of maintenance and capital works to the energy, water, industrial and mining sectors. In turn, Downer Utilities itself is owned by ASX-listed engineering and utilities group DOWNER EDI LIMITED. Downer Utilities originally traded as Tenix Australia, a joint venture between Downer EDI and Tenix Australia. However, in 2013 Downer took full control of the business, and it was renamed DownerTenix; since then, the division has been completely incorporated into Downer EDI's wider operations. Downer Utilities SDR is headquartered in North Ryde, New South Wales.	Not independent

		late 2013 through the acquisition of prominent engineering, sciences and project delivery group Sinclair Knight Merz (SKM). The group has since been renamed JACOBS GROUP AUSTRALIA HOLDINGS LTD and sits within a separate but related local group. Jacobs' Australian operations are based in Canberra, ACT, and it has a presence in every state and territory. It is led by managing director Peter Hewitson. For the financial year ended 2 October 2015, Jacobs Australia posted revenue of \$97.74 million (FY2014: \$137.63 million) and a net loss of \$24.00 million (FY2014: \$20.00 million).	
510	JACOBS E&C AUSTRALIA PTY LTD	JACOBS EC Australia Pty Ltd, formerly Aker Solutions Australia, provides design, engineering, project management, procurement and construction management services across the petroleum, chemicals, mining and metals sectors. The company is a subsidiary of JACOBS AUSTRALIA PTY LIMITED, and its ultimate parent is Jacobs Engineering Group Inc. (NYSE: JEC). Parent entity Jacobs Australia also provides services to the aerospace and defence, automotive, industrial, environmental and nuclear sectors. Jacobs EC Australia is based in Melbourne, Victoria.	Not independent
511	JACOBS GROUP (AUSTRALIA) PTY LTD	JACOBS Group (Australia) Pty Ltd previously traded as Sinclair Knight Merz (SKM) and was a leading Australian engineering, sciences and project delivery firm. Its capabilities included project management and delivery, strategic consulting, asset management, ICT services, and IT and communications services. Based in North Sydney, New South Wales, SKM had operations throughout Australia, New Zealand, Asia, Europe, the Middle East and South America. In late 2013, however, SKM was acquired by US engineering giant Jacobs Engineering Group, Inc. (NYSE: JEC); Jacobs is also represented in Australia by JACOBS AUSTRALIA PTY LIMITED. The buyout prompted this entity's name change, and SKM now operates under the Jacobs banner. The company reports financials through parent company JACOBS GROUP AUSTRALIA HOLDINGS LTD, which continues to report financials on behalf of the former SKM business.	Not independent
512	JACOBS GROUP AUSTRALIA HOLDINGS LTD	JACOBS Group Australia Holdings Ltd serves as a holding company for JACOBS GROUP (AUSTRALIA) PTY LTD and its controlled entities, which provide engineering and technology consulting services to a wide variety of projects. The group formerly traded as Sinclair Knight Merz (SKM) and was a leading Australian engineering, sciences and project delivery firm. In late 2013, however, SKM was acquired by US engineering giant Jacobs Engineering Group, Inc. (NYSE: JEC). JACOBS Group Australia Holdings is led by managing director group vice president and general manager Patrick Hill. It is based in Sydney, with additional offices across all states and territories. The company changed its reporting year-end from June to September in FY2014 in order to align with its new ultimate parent, Jacobs Engineering Group, Inc. For the year ended 2 October 2015, the company booked revenue of \$1.03 million (FY2014: \$1.53 million) and a net profit of \$28.40 million (FY2014: \$3.27 million net loss).	Not independent

559	LANDPARTNERS PTY LTD LandPartners Limited is a management consulting firm operating in the building and construction sector. The core function of the company is to assist with the planning, design, environmental engineering and modification of various projects. LandPartners performs assessments to identify the opportunities and restrictions of building and construction sites. The company also develops computer-based Spatial Knowledge Management Systems, produces digital cadastral databases, and hosts web-based scoping maps on behalf of clients. LandPartners has established a broad client base consisting of property developers, government departments, infrastructure providers, and mining and construction firms. Based in the inner-Brisbane suburb of Milton, the firm has a strong presence across the eastern seaboard with offices across New South Wales and Queensland. The company is led by chief executive officer Adam Dee. For the financial year ended 30 June 2016, LandPartners recorded revenue of \$17.77 million (FY2015: \$16.52 million) and a net profit of \$790,227 (FY2015: \$139,808 net loss).	Different function (Management consulting)
560	LANSKEY CONSTRUCTIONS PTY. LTD. Lanskey Constructions Pty Ltd is an Australian construction and project management company with metropolitan and regional coverage across the country. The company commenced operations in 1986 and specialises in commercial construction, petroleum industry construction, commercial fit-outs, commercial re-imaging, live energy sites and industrial infrastructure. Lanskey Constructions is a preferred partner of BP for the construction of quick service stations often alongside fast food restaurants. The company is based in Brisbane, Queensland.	Different function (Interior fit outs)
561	LANTRAK LOGISTICS (VIC) PTY LTD Lantrak Logistics (VIC) Pty Ltd (Lantrak) is involved in the provision of soil management solutions along with equipment and allied vehicle hire. The company commenced operations in 1959 as a transport operator and eventually branched out to form truck and plant equipment hire divisions. Today, the company is known as an industry leader in earthmoving works and has one of Australia's largest machinery, truck and tip vehicle fleet networks. The company also supplies accredited contractors to customers who require staff to operate the machinery. Based in the south-eastern Melbourne suburb of Hallam, Victoria, Lantrak has another office in the suburb of Tullamarine, and an interstate office in Brisbane, Queensland. Lantrak's clientele include businesses operating in the construction, landscape, civil works and manufacturing sectors.	Different function (Equipment hire)

	sectors. The group is based in the Adelaide suburb of Kent Town, South Australia, with offices in Melbourne and Bendigo, Victoria. Leed is headed by managing director Andrew Millar. For the financial year ended 30 June 2015, Leed Holding booked revenue of \$95.71 million (FY2014: \$108.80 million) and a net profit of \$2.04 million (FY2014: \$4.78 million).	
566	LENLEASE ENGINEERING MANAGEMENT SERVICES PTY LIMITED Lend Lease Engineering Management Services Pty Ltd provides property management services for its parent company, ABIGROUP LTD. Abigroup Ltd was formerly one of Australia's most diverse national contractors, offering services through its engineering, building, water, rail and earthmoving businesses. However, the company now forms part of LENLEASE CONSTRUCTION AUSTRALIA PTY LIMITED, which is in turn a wholly-owned subsidiary of major Australian property investment, development and management group LENLEASE CORPORATION LIMITED (ASX: LLC). LendLease's Construction business, which now includes Abigroup's former operations, is one of the country's largest construction and infrastructure multi-service providers. It operates internationally and provides project management, design, and construction services, predominantly in the infrastructure, defence, mixed-use, commercial, and residential sectors. The division previously operated through subsidiaries including Abigroup, Boulderstone and Lend Lease Infrastructure Services. But following a restructure in mid-2013, LendLease's entire Australian Construction business now trades under the Lend Lease banner, with operations split into three units: Building, Engineering and Services. Lend Lease Engineering Management Services and Abigroup are based at Lend Lease's head office in the Sydney suburb of Barangaroo, New South Wales. LendLease has additional offices in Melbourne, Brisbane, Adelaide, Perth, Belmont and Canberra.	Not independent
567	LENLEASE ENGINEERING PTY LIMITED Lend Lease Engineering Pty Ltd is a leading provider of civil construction and engineering services to the public and private sectors. The company caters to projects of all sizes, including roads, bridges, tunnels, dams, railways and ports, as well as industrial and resource-related works. The company forms part of LEND LEASE CONSTRUCTION AUSTRALIA PTY LIMITED, which is in turn a wholly-owned subsidiary of LEND LEASE CORPORATION LTD (ASX: LLC), a major Australian property investment, development and management group. Lend Lease's Construction and Infrastructure business, including Lend Lease Engineering has projects spanning civil, infrastructure, industrial and power-plant works. It provides services to a large number of power, gas, government and industrial clients. The company operated through subsidiaries including Abigroup, Boulderstone and Lend Lease Infrastructure Services before a restructure in mid-2013. Lend Lease's entire Australian Construction and Infrastructure business now trades under the Lend Lease banner, based in the Sydney suburb of Millers Point, New South Wales.	Not independent
568	LENLEASE I.POWER SOLUTIONS (WA) PTY LTD LendLease i.Power Solutions (WA) Pty Ltd is a subsidiary of LENLEASE I.POWER SOLUTIONS PTY LTD, a multi-disciplinary electrical engineering firm. The company specialises in the design, manufacture, installation and sale of switchgear, substations and switchrooms; the engineering of automation, SCADA, process control and IT solutions; and the supply of on-site electrical services such as electrical turnkey projects. The business ultimately forms part of LENLEASE CORPORATION LIMITED (ASX: LLC), a major Australian property investment, development and management group. LendLease i.Power Solutions was formerly known as Conneq i.Power Solutions, until it was acquired by LendLease's infrastructure services in 2008. LendLease i.Power Solutions (WA) represents the West Australian operations of the iPower group and has its headquarters in the Perth suburb of Kewdale. The LendLease i.Power Solutions group is based in Brisbane, Queensland, and it has additional Queensland offices in Cairns and Mackay, plus an office at Beresfield near Newcastle in New South Wales. 692	ORBITAL AUSTRALIA PTY LTD	Orbital Australia Pty Ltd is an engineering services provider focused on fuel systems for motorcycles, marine and recreational vehicles, automobiles and trucks. It is a wholly-owned subsidiary of publicly listed ORBITAL CORPORATION LIMITED (ASX ticker code: OEC). In Australia, the company has been operating since 1973 and its head office is based in Perth, Western Australia. The company also has associated companies in the US, as well as representation through branch offices in Sydney and Beijing. Orbital Australia operates through three core business segments: engineering services, royalties licenses and synerject. Under the engineering services business segment, it offers design, manufacturing, development and testing of engines and engine management systems. In the royalties licenses segment, it is focused on engine control such as software and hardware to meet emissions and performance as per client requirements. In the synerject business segment, it works in partnership with SiemensVDO for the supply of fuel systems including fuel pumps, electronic control units (ECU) and integrated fuel systems which can supply both direct injection and port injection fuel systems for 2-stroke and 4-stroke models. Norfolk Group operated through three main businesses, O'Donnell Griffin, Haden and Resolve FM. In mid-2013, the entire group was acquired by Perth-based engineering firm RCR TOMLINSON LTD (ASX: RCR), resulting in Norfolk Group's delisting from the ASX. Norfolk Group now trades as RCR Infrastructure and represents one of the three operating divisions within the RCR Tomlinson group, alongside RCR Resources and RCR Energy. RCR Infrastructure is based at RCR Tomlinson's head office in Perth, Western Australia.	Not independent
760	RCR INFRASTRUCTURE GROUP (XNFK) PTY LTD	RCR Infrastructure Group (XNFK) Pty Ltd previously traded as Norfolk Group Limited and was an ASX-listed provider of integrated engineering solutions throughout Australia, New Zealand and Vietnam (ASX: NFK). The group operated through three main businesses — O'Donnell Griffin, Haden and Resolve FM — and specialised in the provision of electrical, data, heating, ventilation and air conditioning services, as well as facilities management and related building product manufacturing services. But in mid-2013, the entire group was acquired by Perth-based engineering firm RCR TOMLINSON LTD (ASX: RCR), resulting in Norfolk Group's delisting from the ASX. Norfolk Group now trades as RCR Infrastructure and represents one of the three operating divisions within the RCR Tomlinson group, alongside RCR Resources and RCR Energy. RCR Infrastructure is based at RCR Tomlinson's head office in Perth, Western Australia, and is led by group managing director and CEO Paul Dalgleish. RCR Infrastructure Group (XNFK) now reports financials through its ASX-listed ultimate parent, RCR Tomlinson Ltd.	Not independent
761	RCR MINING PTY LTD	RCR Mining Pty Ltd is a wholly-owned subsidiary of RCR TOMLINSON LTD (ASX: RCR), a leading diversified engineering and infrastructure services provider. RCR Mining forms part of the group's RCR Resources business and provides turnkey materials handling and Original Equipment Manufacture (OEM) solutions from design and manufacture to maintenance and off-site repair. The group is based in Sydney, New South Wales, while the RCR Resources business is based in Perth, Western Australia.	Not independent
762	RCR O'DONNELL GRIFFIN PTY LTD	RCR O'Donnell Griffin Pty Ltd, trading as O'Donnell Griffin, is a provider of electrical and communications engineering solutions. The company designs, builds and maintains infrastructure assets such as railway signalling and overhead wiring systems, power generation, transmission and distribution systems, high voltage cabling and switchboards, telecommunications networks, and fire detection and suppression systems. O'Donnell Griffin was previously one of the three main operating businesses of the ASX-listed Norfolk Group Limited, a provider of integrated engineering solutions throughout Australia, New Zealand and Vietnam. But in mid-2013, the entire group was acquired by Perth-based engineering firm RCR TOMLINSON LTD (ASX: RCR), resulting in Norfolk Group's delisting from the ASX. Norfolk Group now trades as RCR Infrastructure and represents one of the three operating divisions within the RCR Tomlinson group, alongside RCR Resources and RCR Energy. O'Donnell Griffin continues to operate as one of the four main businesses within RCR Infrastructure, alongside Haden, Resolve FM and RCR Power.	Not independent
763	RCR RESOURCES (TRIPPOWER) PTY LTD	RCR Resources (Tripower) Pty Ltd, formerly Positron Tripower Pty Ltd, is an engineering company that provides electrical, mechanical and hydraulic construction services to the mining, resource and infrastructure industries. The company specialises in designing, manufacturing, installing and commissioning the realms of electrical services, providing construction and maintenance services. RCR Resources (Tripower) is a subsidiary of POSITRON GROUP PTY LTD, which was acquired by RCR TOMLINSON LTD (ASX: RCR) in 2007. RCR Tomlinson is a diversified engineering and infrastructure company catering to the resources, energy and infrastructure sectors. RCR Resources (Tripower) makes up part of the group's resources division, which provides specialist structural, construction and maintenance services to the resources, oil gas and LNG industries. RCR Resources (Tripower) is based in Mackay, Queensland.	Not independent
764	RCR RESOURCES PTY LTD	RCR Resources Pty Ltd is a wholly-owned subsidiary of RCR TOMLINSON LTD (ASX: RCR), a multi-disciplined engineering company that provides a range of services to the mining, energy, resources and power sectors. RCR Resources represents one of its parent company's key divisions, and it is engaged in the provision of specialist structural, construction and maintenance services to the resources, oil and gas, and LNG industries. Its specialist services include valve overhaul, plant shutdown and repair, refurbishment and maintenance tasks, and structural, mechanical and piping installation. RCR Resources is based at RCR Tomlinson's head office in Perth, Western Australia.	Not independent

765	RCR TOMLINSON LTD	RCR has been awarded an Early Works Contract, working with Pacific Hydro to deliver a large-scale utility solar energy project generating an initial 100MWac of power. The project is subject to final investment decision by Pacific Hydro and other approvals. RCR and Pacific Hydro will finalise the Engineering, Procurement and Construction (EPC) contract for the first stage (100MWac) of the Houghton Solar Farm, while engineering is based on Stage 1 and 2 totalling 300MWac.	Different function (Manufacturing activities)
766	RCR TOMLINSON LTD	RCR Tomlinson Limited, a multi-disciplinary engineering and infrastructure company, together with its subsidiaries, provides engineering solutions to the infrastructure, energy, and resources sectors in Australia and internationally. The company operates through three segments: Infrastructure, Energy, and Resources. The Infrastructure segment provides electrical and instrumentation services; railway signaling and overhead wiring systems; power generation, transmission, distribution systems; generator maintenance services; high voltage cabling services; switchboards and process control instrumentation services; fire and data communications systems; water treatment systems and technologies; installation and maintenance of mechanical engineering, as well as heating, ventilation, and air conditioning systems; and facilities management services. This segment offers its products and services under the RCR, O'Donnell Griffin, Haden, and Resolve FM brands. The Energy segment offers integrated solutions for power generation and thermal energy plants, components, and systems; servicing and maintenance services; proprietary heat recovery steam generators; and laser cutting services. The Resources segment provides engineering, construction, maintenance, and shutdown services; turnkey material handling solutions from design and manufacture; specialist shutdown and heat treatment services to off-site repairs; and heavy engineering equipment maintenance services. The company also offers apron and belt feeders, conveyors, bucket wheel excavators, stackers, reclaimers, spreaders, seizers, scrubbers, screens, and car dumpers, as well as mobile in-pit crushing and conveying, and other mobile mining solutions. RCR Tomlinson Limited is headquartered in Sydney, Australia.	Duplicate
767	REDHALL GROUP	Redhall Group plc provides design, manufacture, and installation services to hazard and security environments in the United Kingdom, other European Union countries, and internationally. It designs, manufactures, maintains, and installs bespoke specialist plant and equipment in the nuclear, defense, oil and gas, petrochemical, chemical, pharmaceutical, and cellular network and food sectors; and designs and manufactures fire and blast resistant doors, windows, and wall systems. The company also offers bespoke steel door sets, blast windows, modular wall systems, and blast relief panels; engineering services, including consultation, project design, project management, and manufacturing and installation services; and relocation, maintenance, and fabrication and erection services. Redhall Group plc was incorporated in 1932 and is based in Wakefield, the United Kingdom.	Different function (Manufacturing activities)

823	SEDGMAN LIMITED	Sedgman Limited provides mineral processing and associated infrastructure solutions to the resources industry in Australia, Canada, Chile, Mozambique, and internationally. The company operates in two segments, Projects and Operations. The Projects segment is involved in the project assessment, development, and definition activities; and design, procurement, construction, and commissioning of coal handling and preparation plants, minerals processing plants, and other related equipment. This segment provides services across process, mechanical, civil, structural, and electrical and controls sectors. The Operations segment owns and operates coal handling and preparation plants, and ore crushing and screening plants. This segment also provides operations development, management, and support services; maintenance services for plants and associated infrastructure; and operations consultancy services. The company is headquartered in Milton, Australia. Sedgman Limited operates as a subsidiary of CIMIC Group Investments Pty Limited.	Duplicate
824	SEDGMAN PTY LIMITED	Sedgman Limited provides project and operational services to the resources sector in Australia and internationally. It delivers mineral processing and associated infrastructure solutions to industry clients in Australia, Africa, the Americas and Asia Pacific. Its services are divided into three operating segments: Create (project assessment, consulting services, project development and project definition), Build (engineering, procurement, construction and commissioning) and Operate (operational readiness, plant operations and maintenance, operations engineering support and sustaining capital works). Sedgman has capabilities in the areas of coal, minerals and metals and iron ore mining as well as infrastructure and consulting. The company was listed on the Australian Securities Exchange from 2006 until it was acquired by CIMIC GROUP LIMITED in early 2016 in a \$256 million hostile takeover. Sedgman is headquartered in the Brisbane suburb of Milton, Queensland. It has additional local offices in Perth, New Castle, Townsville, Mackay and the Gold Coast plus international offices in South Africa, Chile, Canada and China.	Not independent

827	SERCK CONTROLS PTY LIMITED	Serck Controls Pty Ltd was formerly independently engaged in the sale of products and services related to the development, installation and commissioning of telemetry and process control systems. The company is now a wholly-owned subsidiary of SCHNEIDER ELECTRIC AUSTRALIA HOLDINGS PTY LTD, which through its subsidiaries is engaged in the manufacture, importation, assembly and distribution of electrical distribution, industrial automation, and control and wiring accessory products and equipment. The former operations of Serck Controls were fully integrated into Schneider Electric's Australian business operations following Schneider Electric's acquisition of Serck Controls' former parent, SCADA GROUP PTY LIMITED (SCADAGroup), in 2010. Serck Controls' telemetry technology facilitates remote control measurement, monitoring and data transfer, and is principally used by the water, wastewater and oil and gas industries. Serck Controls is based in Macquarie Park, New South Wales.	Not independent
828	SERVICE STREAM CUSTOMER CARE PTY LTD	Service Stream Customer Care Pty Ltd (SSS), formerly Service Stream Solutions Pty Ltd, comprises the outsourced contact centre services of SERVICE STREAM LIMITED, a specialist end-to-end solutions provider for the telecommunication and utilities sectors. It provides a range of customer services options to the telecommunications, government and corporate sectors. Services the company offers include contact centre management, specialist logistics and supply chain management, supply chain fulfilment capabilities (back office processes), administrative and information vetting, and distribution services. Service Stream Customer Care is based in Melbourne, Victoria. The company reports through parent entity Service Stream Limited.	Not independent
829	SERVICE STREAM ENERGY & WATER PTY LTD	Service Stream Energy Water Pty Ltd (formerly AMRS (Aust) Pty Ltd) provides metering services to utilities and local councils in Australia. The company is a wholly-owned subsidiary of SERVICE STREAM LIMITED (ASX: SSM), a provider of specialist end-to-end services in the telecommunications and utilities sectors. Service Stream Energy Water now represents a key part of SSM's utilities division, which offers excavation services, asset relocation services, meter installation and reading services, water and environmental management services, and design and installation of pipeline systems. The company is based at SSM's head office in Melbourne, Victoria. The company also reports financials through its ASX-listed ultimate parent company.	Not independent
830	SERVICE STREAM FIXED COMMUNICATIONS PTY LTD	Service Stream Fixed Communications Pty Ltd (SSFC, formerly Service Stream Communications) provides specialist end-to-end services to customers in the telecommunications and utilities industry. It is a wholly-owned subsidiary of the ASX-listed SERVICE STREAM LIMITED, a provider of essential network services, including access, design, build, installation and maintenance (ASX: SSM). SSFC serves as the link between the consumer and telecommunications and utilities companies by maintaining public payphones, connecting phone and broadband services when moving house, calling directory assistance from call centre operators and administering residential power meters. The Service Stream group is based in Melbourne, Victoria, with additional locations in all mainland states and the ACT.	Not independent
831	SERVICE STREAM HOLDINGS PTY LTD	Service Stream Holdings Pty Ltd is a holding entity for a number of companies within the Service Stream group. Headed by ASX-listed SERVICE STREAM LIMITED (ASX: SSM), the group provides specialised end-to-end services to the telecommunications and utilities sector. The company designs, builds, maintains and manages infrastructure across the telecommunications, electricity, solar energy and water sectors. Initially trading as a tech company called Santech, Service Stream Holdings was itself listed on the ASX from 1987 (ASX: SAN). In 1992 it became David Garry Holdings (ASX: DAH), a corporate advisory business, and in 2001 it became Garrison Accounting Group (ASX: GAR) before rebranding as Service Stream Limited in 2004 (ASX: STR). In 2007, the group delisted following its merger with ASX-listed Total Communications Infrastructure Limited, which now trades as the listed Service Stream Limited. Service Stream Holdings is based at its parent company's head office in Melbourne, Victoria.	Not independent
832	SERVICE STREAM LTD	Service Stream Limited accesses, designs, builds, installs, and maintains networks in Australia. It operates through Fixed Communications, Network Construction, and Energy & Water segments. The Fixed Communications segment provides a range of operations and maintenance, and other works services, such as customer connections and service assurance, as well as asset remediation, augmentation, and relocation to the owners of fixed-line telecommunications networks. The Network Construction segment offers turnkey services, including program management, site acquisition, town planning, design, engineering, and construction management for projects in wireless and fixed-line telecommunications, signaling, and power. The Energy & Water segment provides various metering, in-home, and new energy services to electricity, gas, and water	Duplicate

905	THALES AUSTRALIA LIMITED Thales Australia Limited is the key operating entity within the Thales group of companies in Australia. The company provides electronics and systems for the aerospace, defence, security and transport sectors. Thales Australia is a wholly-owned subsidiary of THALES AUSTRALIA HOLDINGS PTY LTD, and the entire local group ultimately forms part of the France-based Thales S.A. (Euronext: HO). Thales was established in Australia when the global group acquired a 50% stake in ADI GROUP PTY LIMITED in 1999. It purchased the remaining 50% stake in 2006, and it is now a leading provider of systems, products and services in both the defence and commercial sectors. The company also carries out research and development activities in conjunction with the Defence Science and Technology Organisation (DSTO), the Commonwealth Scientific and Industrial Research Organisation (CSIRO) and other tertiary institutions. Thales Australia is based in the Sydney suburb of Olympic Park, New South Wales. It is overseen by CEO and country director Christopher Jenkins. Thales Australia reports financials through its ultimate local parent, Thales Australia Holdings.	Not independent
906	THE BANKTECH GROUP PTY LTD The Banktech Group Pty Ltd (Banktech) supplies and installs fee-based ATM and payment services. Focusing on providing ATM and payment services in demanding, high-volume locations, Banktech aims to ensure its ATMs continue to maintain maximum "uptime". The company delivers this by undertaking critical operational services "in-house" rather than through subcontractors. Established in 1991, Banktech has grown to become a leader in ATM services around Australia, providing its Eftex service (EFTEX PTY. LIMITED) to drive the company's CashConnect ATM network. The company also provides a range of fully managed services to ATM owners such as banks, building societies and credit unions. The company also specialises in providing back office operations for Australian financial institutions. Banktech's head office is in East Sydney, New South Wales. The company has additional offices in Melbourne and Brisbane, as well as offshore back office operations in Bangalore, India.	Different function (Payment services)
907	THE ENGINEERING COMPANY PTY LIMITED The Engineering Company Pty Limited (TEC) is an industrial engineering company dating back to 1993. The group operates solely from its headquarters in West Somerset, Tasmania, through five distinct divisions: fabrication, machine shop, crane, TEC heavy fixed plant, contract maintenance and labour hire. The fabrication division specialises in plasma and oxy propane cutting of ferrous and non-ferrous metals, and further specialising in metallic, manual and submerged arc. The machine shop division's capabilities include the fitting and assembly of heavy fixed plant items, including gearboxes, pumps, haulage floats and trailers; while its crane division offers pile driving, concrete panel erection, dam dredging, and the supply of crane and ancillary equipment. TEC additionally specialises in the design and manufacture of lifting and jacking equipment, and project management and supervision through its TEC Heavy Fixed Plant Division. Additionally, the group also provides contract maintenance and labour hire services throughout Tasmania.	Different function (Manufacturing activities)
